1896.

Price 2 Rupees.

BOMBAY:

PRINTED AT THE "TATTVA-VIVECHAKA" PRESS.

PREFACE

FOR the little we know of Vâchaspati Miśra the reader is referred to the Sanskrit Introduction; wherein it is shown that he was a Maithila Brâhmana and flourished somewhere about the 9th Century A. D. For Udayanâchârya the author of the "Parisuddi" on Vâchaspati Miśra's "Tâtparya-Tikâ," flourished in the reign of king Lakshmana Sen of Bengal,—of whose era we have just commenced the 8th century; and at least a century must have elapsed before a work could deserve the honor of a commentary at the hands of Udayanâchârya.

I take this opportunity to thank my friend Balu Govindadasa of Benares, to whom I owe more than I can express,—who has been chiefly instrumental in my undertaking and finishing—not only of the present translation, but also of the Kâvyaprakâsa and the Nyâya—Muktâvali, and some works on Mimânsâ. My thanks are also due to Tookaram Tatya Esq. of Bombay for his publication of the work, and also to the proprietors of the "Theosophist" of Madras for allowing a reprint of the translation which first appeared in the columns of that excellent journal.

RAJ LIBRARY, DARBHANGA:
1st July 1896.

GANGÂNÂTHA JHÂ.

Introduction ... ... xvii—xxxii

KARIKA I.

1 Benediction 1
2 Introduction to Karika I 1
3 Necessity of Scientific Enquiry 2
4 Threefold Division of Pain 2
5 Objection-Inquiry Superfluous 3
6 Reply 4
7 Auspiciousness of the beginning word 4

KARIKA II.

8 Objection-Adequacy of Vedic means... 4
9 Similarity of the Vedic with the Obvious means 5
10 Impurity, Decay and Excessiveness of the Vedic means 6
11 The Impurity of animal—slaughter in Sacrifice 6
12 Nonpermanence and Excess of the results of Vedic rites 7
13 Immortality from Vedic rites means long-durability 7
14 Discriminative wisdom the only means 7
15 Literal Interpretation of the Karika 8
16 Source of discriminative Knowledge... 8

KARIKA III.

17 Fourfold Division of Categories 9
18 The Productive (1) 9
19 The Productive-product (2) 9
20 The Products (3) 10
21 The non-product—non-productive (4) 10

KARIKA IV.

22 The three kinds of Proof 10
23 Proof defined 11
24 The three-foldness of proof 11
25 Only three kinds of proof 11
26 The inclusion of all other proofs in the above-mentioned ... 12
27 Necessity of enquiry into the different kinds of proof 12
28 The order of Explanation 12

KARIKA V.

29 Specific definitions of the proofs 12
30 " Perception " defined 13

PAGE.
31 Insentience of *Buddhi* 13
32 Differentiation of "Perception" from the other forms of proof ... 14
33 "Inference" as a distinct form of proof 14
34 Inference defined 15
35 The three kinds of Inference 15
36 The first Division of Inference 16
37 The Negative—*a posteriori*—Inference 16
38 The Affirmative—*a priori*—Inference 16
39 "Valid Testimony" based on Inference 17
40 Self-evidence of *Sruti* 18
41 *Srutis* and Puranas included in Valid Testimony 18
42 Pretended Revelations 18
43 Differentiation of Valid Testimony from Inference 18
44 Other kinds of proof set aside or included in above 19
45 Analogy, included in Valid Testimony 19
46 "Apparent Inconsistency" included in Inference 20
47 "Negation" included in "Perception" 21
48 "Probability" in Inference 22
49 Rumour discarded 22

KARIKA VI.

50 Introduction 22
51 Knowledge of Nature &c., through Inference 23
52 Knowledge of others by Revelation 23

KARIKA VII.

53 Objection—Nature &c., being not amenable to the senses, are non-existing 23
54,55 Different causes of non-perception of objects by the Senses 24—25
56 Non-perception of an object, no proof of non-existence 25

KARIKA VIII.

57 Objection-existence of Nature can be denied like that of sky-flowers-started, and set aside: there are effects bearing testimony to the existence of Nature 26
58 Such effects mentioned 26

KIRIKA IX.

59 Different views with regard to the nature of an effect 26
60 Impossibility of the existence of Nature being proved in accordance with the Vedanta and Bauddha tenets 27
61 Effect declared to be a permanent Entity 28
62 Bauddha view refuted 28
63 Vedanta view refuted 28

PAGE.

64 Yoga and Vaiseshika views criticised and the Sankhya view established; the first argument in favour there of 29
65 The second argument in favour of the effect being an entity ... 29
66 The third argument 30
67 The fourth argument 30
68 The fifth argument 31
69 Proofs of the non-difference of cause and effect 31
70 The effect only a particular development of the cause 32
71 Difference of purpose and action no ground of difference 33
72 Objection based on the nature of the manifestation of the effect... 33
73 Objection set aside as being common to both theories 34
74 *Production* of the cloth not identical with the *cloth* 34
75 Necessity of causal operation 34
76 Conclusion of the Karika 35

KARIKA X.

77 Introduction to the consideration of the Manifested 35
78 The Manifested-as having a cause 35
79 ,, being non-eternal 35
80 ,, ,, non-pervading 35
81 ,, ,, active 35
82 ,, ,, multi-form 36
83 ,, ,, dependent 36
84 ,, ,, predicative 36
85 ,, ,, conjunct 36
86 ,, ,, subordinate 36
87 The contrary nature of the Unmanifested 37

KARIKA XI.

88 Introduction to Karika XI 37
89 Similarities between the Manifested and the Unmanifested—
(i) having the three constituent attributes 37
90 (ii) being indiscriminative 37
91 Objection based on the Bauddha idealism 38
92 (iii) Insentient 38
93 (iv) Productive 38
94 Similarity with Nature stated 38
95 Dissimilarity of these from Spirit 38
96 Objection based on similarity of the Spirit with the Manifested ... 39

KARIKA XII.

97 Introduction to the consideration of the Attributes... 39
98 Construction of the Karika 40
99 Character of the Attributes as love, aversion and stupefaction ... 40
100 The functions of the Attributes 40
101 The method of operation of the attributes 42

INTRODUCTION.

The lucid writing of Vâchaspati Misra does not stand in need of much in the shape of an Introduction. But under the cover of this title, I propose to give a brief synopsis of the cardinal doctrines of the Sânkhya Philosophy, in the hope that a reading of this *resume* would prepare the mind of the student for the reception of the abstruse truths, in which the Tattvakaumudî abounds. Any corrections or suggestions for alteration &c., will be most gratefully received.

To begin with, the Sânkhya lays down a fourfold division of categories based on their respective causal and productive efficiency. This division is into—(1) Productive—(2) Productive and—Produced—(3) Produced—(4) Neither Productive—nor—Produced. This classification includes all the twenty-five Principles—called Tattwas,—Prakriti or Nature being the productive, since the Sânkhyas allow of no other purely productive agency. The Productive—and—Produced are the other Principles—Buddhi &c. These partake of the nature of both—thus Buddhi is *productive* in as much as out of it evolves Ahankâra and it is *produced* in as much as it itself evolves out of Prakriti. The purely non-productive Principles are the eleven sense-organs and the five elements. These are purely *non-productive* because none of these can give birth to a substance essentially different from them. The Purusha (Spirit) is *neither productive nor produced.* In fact it is without attributes. All accessories are the effects of the three Gunas, and the Spirit isby its very nature free from these and as such without any accessories.

Having thus classified the various principles, we now turn to the consideration of the various principles separately.

First of all then we must examine the nature of the all-powerful creative agent of the Sânkhyas or, more properly, the creative force of the Universe. Then first of all—how is this force constituted? It is naturally made up of the three

Gunas—Sattwa, Rajas, and Tamas; and when the Pradhâna is in its natural state, lying dormant, these three attributes are in an equilibrium. When occasion presents itself *i. e.* when the Adrishta of the soul acts upon the Prâdhana, the equilibrium is disturbed, and it is this disturbance that gives rise to the various kinds of creations. The diversity of created objects is thus rendered quite explicable. As already mentioned, all accessories are due to the predominance of one or other of the three Gunas—the predominance of Sattwa giving rise to the kind of creation in which that attribute predominates, and so forth. Without proceeding any further, we must stop to consider the nature and properties and the *Modus operandi* of these Gunas.

The three attributes—Sattwa, Rajas and Tamas have respectively the character of Happiness, Unhappiness and Delusion; and have their operations characterised respectively by enlightenment, activity and restraint; and are so constituted that the one always operates in suppression of the other, and at the same time depending upon this latter. To explain this contrariety of properties—The universe would be in an unceasing round of activity, if the only operating force were the Rajas; in order to provide against this, Nature provides herself with a restraining agency in the shape of the Tamoguṇa which by its nature is dull and passive. The natures of the different objects of the universe are thus ascertained in accordance with the excess of one or the other of these attributes. Again, if there were no enlightening agency in the shape of Sattwa, Nature would be nothing better than a mass of blind force acting in a haphazard manner. Thus we have established the necessity of the three Attributes.

Here an objector comes forward and says—How can the attributes, endowed as they are with mutually counteracting properties, cöoperate and bring about such a grand and stupendous structure as our Universe? The reply is that it is a very common fact that two or more substances though mutually contradictory, do cöoperate towards a single end—*e. g.* the wick and the oil—both taken separately are as much against the action of one another as towards fire, but when they are together they help to brighten the fire. In the same manner, though the Gunas are mutually counteractive, yet when combined, they act towards a single end, supplying each other's deficiencies.

The necessity of postulating three different forces is further supported by another reason. We see that in nature there are three distinct properties—of pleasure, pain and dulness. All other properties are reducible to these three heads. Again we find that these are properties so much opposed to one another that all could never be the effect of a single agency. Thus then we must postulate three different forces or constituent elements of Nature, to which severally we could trace the three distinct properties. To these three constituents of Nature we give the names—Sattwa, Rajas and Tamas. We find in the universe the above three properties, and as all the properties of the effect must be a direct resultant of a like property in its cause, so we at once arrive at the conclusion that the cause of the Universe—the Pradhâna—must be endowed with the three Attributes.

So much for the action of the Gunas. We must now turn our attention towards the all-important Prakriti—the Keystone of the Sankhya Philosophy.

What, then, is this Prakriti? Does it stand for the Theistic God? Or for the Bauddha "Sensations"? Or does it correspond to the Vedantic "Mâyâ"? To all this we reply—It is all these, and It is neither of these. It resembles the Vedantic Mâyâ in asmuch as it is the one root of the Universe, which is asserted of *Mâyâ* also though, as of an illussory world. But the fact of its being the root of the Universe is akin to that of the Sankhya-Prakriti. It is not the God. Since it is said to be without intelligence, a mere dead Matter equipped with certain potentialities due to the Gunas. In short, Prakriti is the one rootless Root of the Universe (objective as well as subjective)—endowed with the three Gunas and evolving through these, every kind of existence—save of course, the Purusha—Spirit.

The next point that we have to consider is—How do the Sankhyas prove the existence, the rootlessness, and eternality of this Prakriti? Is it necessary to postulate such a rootless root itself unmanifested and yet manifesting all objective and subjective existence? Proofs of this are given at length in all works on the Sankhya Philosophy, and it will not be altogether out of place here to briefly sum them up. But before we take up this, it is necessary to explain the Sankhya doctrine of *causality*, the point on which rests the whole fabric of Prakriti. What then is the cause and how is it related to the effect? Cause is defined as a substance in which the effect subsists in a latent form. Thus then the effect must be said to be eternally existent—primarily in a latent condition, in the cause, and latterly manifesting itself and then commonly recognized as the effect. How to prove that the effect has been lying latent in the cause and has not been newly produced by the cause?

Firstly.—What is nonentity can never be made an entity—That is to say—that which has never existed can never be brought into existence. What remains to be done by the operation of the cause is the manifestation of the effect—that is to say, its manifestation as the effect of the particular cause. And this kind of manifestation we find in the production of oil from the different oil-seeds wherein it has been hitherto lying latent.

Secondly.—We always find that the effect is always in one way or the other related to the cause. Now, this relation would not be possible if the effect were a nonentity; for certainly a nonentity can have no relations. If the relation of the effect with the cause were not necessary then every effect would be possible from every cause. Since in that case there would be no restrictive qualification which would confine the operation of particular causes to particular effects. Thus then this would lead to an absurdity.

Thirdly.—we cannot deny causal efficiency. Now what does this efficiency consist in? It cannot be anything other than the existence in the cause of the effect in a latent condition. For the difference of seeds, as cause of oil, from sand, lies merely in the fact that it is only in the seeds and not in the sand, that the oil subsists.

Fourthly.—the effect is non-different from the cause; and the latter being a entity, the latter must be so also. To take an example, the cloth is non-different from the threads composing it. Because it is neither heavier than the latter, nor is any other relation than that of inherence possible between the two; and it is only between two different things that any other relation as that of conjunction &c., is possible. Nor can the cloth ever exist apart from the threads. The difference of properties and actions cannot establish any difference. For though a single thread cannot do the action of cloth, yet this latter is nothing more than a collection of threads; and we see that what a single man cannot do, can be done very well by a number of them together; *e. g.* a single man cannot carry a palanquin, which work can be very well performed by a number of men together. Thus then we see that the effect is nothing more than the developed cause; and the latter again is merely an undeveloped effect. This identity of cause and effect is declared by Sir William Hamilton also, who says—"when we are aware of something which begins to be, we are by the necessity of our intelligence, constrained to believe that it has a cause. But what does the expression, *that it has a cause*, signify? If we analyse our thought, we shall find that it simply means, that as we cannot conceive any new existence to commence, therefore, all that now is seen to arise under a new appearance had previously an existence under a prior form. We are utterly unable to realise in thought the possibility of the complement of existence either increased or diminished. We are unable on the one hand, to conceive nothing becoming something—or on the other something becoming nothing . . . . . .

There is thus conceived an absolute tautology between the effect and its causes. We think the causes to contain all that is contained in the effect; the effect to contain nothing which was not contained in the causes."
—*Lectures on Metaphysics*—XXXIX.

Having thus proved the existence of the effect in the cause, the Sânkhyas employ the fact in proving the existence of their Pradhâna. The effect being only a developed cause, in which it has been lying latent, all existence must have its unmanifested condition in its cause. That is to say, the elements lie in Self-Consciousness, which lies in Buddhi. Now if we go on increasing the series we would be landed in a *regressus ad infinitum.* In order to avoid this we must postulate the existence of a principle which must be uncaused and which must be the final substrate of the undeveloped state of all other substances. Thus then we have a causeless cause which must be by its very nature unmanifested, the final cause of all;—and to this the Sankhyas give the names "Pradhâna," "Prakriti" or "Avyakta."

Secondly we find that all the substances—from Buddhi downwards—are limited and are the development of some further ultimate Principle—and this is Pradhâna.

Having thus proved the Existence of Pradhana we must define its properties as well as those of its Effects; and see wherein lies the difference.

In order to do this we must first consider the properties of the Manifested Principles—the effects of Pradhâna. These are *caused* and as a necessary consequence of this—*transitory*, *limited*, *mobile*, *many*, *dependent* (on the activity of the Pradhâna), *made up of parts*; these are the characteristics where the Pradhâna differs from the Manifested Principles, Buddhi and the rest. For, as already explained, the Pradhâna is the *uncaused* root of the Universe, and as such, must be *eternal*. And as all Universe is the result of Its evolution, It must be *all-pervading*; as a necessary consequence of this it is immoveable *i. e.* Cannot *move*, in the sense of going from one place to another. And further, since it is, all-pervading it must be *one*. It is *independent*—depending only on the activity of its own constituent Gunas.

These are the points difference. Those of agreement are, that the Pradhâna as well as the manifested principles are the resultants of the various actions of the three Gunas. Secondly, since without intelligence, both must be without discrimination, since discrimination is the result of intelligence. Thirdly both these present objects for the enjoyment of the Spirit. Fourthly since they are without intelligence, they can never be the observers, they must always remain the observed, and as such *common*. This is technical and requires some explanation. Every object that is observed is so, not differently by different individuals, but are common objects of observation for all, and are *common* in that sense. Fifthly they are without intelligence —the only Principle endowed with intelligence being the Spirit. Sixthly they are prolific *i. e.* endowed with evolving energy. The Spirits are without this.

These in brief, are the points of agreement and difference between the Pradhâna on one hand and its effects on the other.

Now we must consider the nature of the *Spirits* and see what the Sankhyas have to say as to their existence, number and properties. But before we proceed with this, we must first see if it is necessary to have a distinct principle in the shape of innumerable Spirits. And on this score, the first reason that presents itself is the fact that we have not yet got any principle that will supply the intelligence. For certainly Intelligence cannot belong to the Buddhi for it is material, being the effect of Prakriti which is essentially non-intelligent, and what is absent in the cause cannot manifest itself in the effect. So we must have a distinct *Principle of Intelligence.*

Secondly.—we see in our every day life that all that is corporeal is for the use of another, as a bed, a chair &c. And we have seen before that all the principles from Prakriti downwards are *bodied.* Though this sounds a little absurd as regards Prakriti, Buddhi and Ahanâkra, yet we must not forget that the body of the apparently immaterial principles is made up of the three Gunas-which are as material as anything. And such being the case, we must postulate the existence of an unbodied or incorporeal principle. And this is Purusha, the Spirit,—and as we have not yet had an Intelligent principle, we attribute intelligence to this incorporeal Spirit. And the Spirit must be unbodied because it is devoid of the three Attributes, for whatever is affected by the Gunas is found to be bodied.

Thirdly.—We have come across in daily life with the general proposition that whatever is naturally connected with either pleasure, pain or delusion, is supervised over by something, and we have also seen that all the principles from the Prakriti downwards are made up of the three Gunas, and as such necessarily, affected by pleasure, pain or delusion; and so these must have a supervisor. And in order to escape *a regressus ad infinitum* this supervisor must be himself untouched by pleasure &c.; and as such must be something over and above Prakriti. And this is Purusha, the Spirit.

Fourthly.—Prakriti and the rest are objects of enjoyment; and as such they necessitate the existence of an enjoyer, who again must not be an object himself. And the enjoyer must be the intelligent principle. For a non-intelligent principle being devoid of consciousness can never be the enjoyer. And this again must be something not made up of pleasure &c. Which can never be the case with Buddhi and the rest. These latter being made up as they are of pleasure, pain and delusion, cannot be the enjoyer of these; for that will involve the absurdity of self-contradictory actions—one made up of pleasure, pain and delusion, cannot be only pleased or pained; for each of these is contradictory to the one or other phase of the constitution of Buddhi. And so we must have an enjoyer over and above Prakriti and the rest. And this is Spirit.

Fifthly and lastly.—All systems of philosophy, and all the great men of the past we find striving after final Release. Now this is not possible of Prakriti or Buddhi. For these latter are constituently made up of pain and as such can never be released from this. So the object of final Release must be one who has neither pleasure nor pain nor delusion for its constituent element; and such a principle is the Spirit alone.

We have thus shown the necessity of postulating a distinct principle in the shape of Purusha, over and above the Prakriti.

The next thing, we have to consider is—What is this Purusha?—How is it constituted?—What are its properties? —What its aim?—and finally, how and when does it attain final Release? We must take each of these questions one by one.

(1) What is Purusha? It is not the thinking principle, since thinking belongs to the *mind.* Nor is it the determinning principle since that is alloted to Buddhi. The character of the Spirit is a very unique one. It is none of these, still it is the necessary factor in all of these. It then is the principal agent of all functions, mental as well as organic. It is the agent who feels, thinks and wills. Without it no functions would be possible, specially consciousness. In short Spirit is the source of intelligence, and as such, the necessary factor in every function of the mind—feeling, intellecting and willing.

(2) How is this Spirit constituted? As a matter of fact the Spirit is constituted of intelligence pure and simple, and is free from every other qualification and encumbrance.

(3) What are its properties? These are thus enunciated: it is *free from the three attributes, possessed of discriminative faculties, non-objective, singular, intelligent and non-productive.* If the Spirit were not naturally free from the action of the Attributes, no liberation from metempsychosis would be possible. Since pain constitutes the very nature of the Attributes and as such can not possibly be separated from it.

And thus no liberation being possible, there would be no necessity for enquiries to which the various systems of philosophy are devoted. And again if the Spirit were not equipped with discriminative faculties, it could never attain to the discriminative wisdom arrived at by the philosophical systems, which would thus become useless.

Next as to the aims of the Spirit. It has been laid down that the Spirit mistakes the fluctuations of the Attributes constituting Nature, to be His own; and thus comes to be affected by pleasure, pain &c.,—which in reality do not affect him,—under the influence of the different kinds of delusions—the modifications of Buddhi. Now the one all-absorbing aim of every Spirit is the attainment of wisdom that would help him to discriminate between Himself and the fluctuations of the Attributes, and thus see the pleasure and pain caused by these in their true light and be no longer affected by them.

The next question that presents itself to us is—how does Purusha attain to this wisdom and thence to final emancipation? This wisdom arises from a constant study of the Sânkhya philosophy, when the Attribute of Goodness is paramount in one's constitution and the others have almost ceased to exist. The Purusha then sees Nature and its constituents in their true light and finds out His mistake, and so shakes off all mistaken preconceptions about self, and thus becomes free from the self, —imposed bonds of Buddhi, and finally retries from metempsycosis and attains final Beatitude.

Having thus said all that we had to say about Prakriti and Purusha, we must look a little into the details of the process of creation.

We have already said that Prakriti is the rootless Root of the Universe. From this Prakriti emanates Buddhi, to which the technical name of *Mahat* or the Great Principle is given. From this Buddhi proceeds *Ahaṇkâra* or the principle of egoism. From this again emanate the eleven senses and the five subtle elements of sound, smell, taste, colour and touch. And from these latter five, proceed the five gross elements—Earth, Water, Fire, Air and Akâśa.

Let us now examine the nature of these principles. First in the scale comes *Buddhi*. This is defined as the principle of *adhyavasâya*. This term literally means "ascertainment" and in explaining this term, the writers exemplify it as the determination that "this is to be done by me." It would thus appear that the functions of this principle are the same as those attributed by Western psychologists to *will*. But the Sankhya *Buddhi* is not mere *will*. It is Will and Intellect combined. For in the opinion of the majority of Western psychologists—specially of those belonging to the Kantian School—"Intellect contemplates the circumstances calling for action and provides the rule of conduct: Will controls the disposition in harmony with the dictator of intelligence." The Sankhyas attribute both these functions to their *Buddhi*. That Buddhi resembles *will*, is further made clearer by the properties assigned to it, by the Sankhyas. These properties are Virtue, Wisdom, Dispassion and Power. As we have said already *will* decides the course of action and as such the virtuousness or otherwise of actions must belong to this principle alone. Again we find that *wisdom* is described as both restrictive and directive and so to attribute the property of wisdom to Buddhi is to give it the dual character of Intellect and Will. Dispassion and Power again must belong to the principle that decides on a certain course of action and in this too we find Buddhi cognate with *Intellect* and *Will* combined.

The principle that we have to consider next is that of Egoism It is the principle to which all notions of the "I" are due. It corresponds with Kant's "*apperception*" and Hamilton's "self-consciousness;" that is to say the notion of self in every form of consciousness: The idea that "*I* have the consciousness," "*I* feel &c." As immediate effects of this principle of Egoism, we have the eleven sense-organs and the five subtle elements. The eleven sense-organs consist of the five intellectual (subjective) senses—the eyes, the ear, the nose, the tongue, the skin,—and the five of action (objective) —*viz.*:—the hands, the feet, speech, the excretory organ and that of generation. The eleventh sense is Manas, (mind). The five subtle elements are those of smell, touch taste, colour and sound. From these latter again proceed the five gross elements—Earth, Air, Water, Fire and Âkâśa; and these have the subtle elements for their properties. Before proceeding any further we must consider the nature of the eleventh sense-organ, the *mind* or the reflective principle. Here first of all we must consider why we should call *mind* a sense at all? The answer is not far to seek. The Sankhyas define *sense* as the immediate effect of the principle of Egoism under the influence of the attribute of Goodness; and this differentia we find in *Manas* as well as in the ten organs generally accepted as senses. Next let us consider what are the functions of this eleventh sense? Manas then is the only faculty that partakes of the nature of both kinds of senses—the objective and the subjective. If it were not so, none of the senses would act, for it is only when these are influenced by the operation of the mind that they act towards their various objects. It would not be quite accurate to say that the senses do not act. Act they do, but these operations are not taken cognizance of by the agent, and as such having their actions purposeless, they may for all intents and purposes, be said to be without action. The function of this principle is technically called in *Sankhya* "reflection" or "thinking." This is further explained—when we first look upon an object the first impressions in connection therewith are all indefinite and without qualifications (निर्विकल्प). This indefinite and vague impression is very soon rendered definite; and this definiteness and the different qualifications are imparted to it by the reflection (or thinking) of the Mind. This process follows so instantaneously that one can scarcely mark the process and thinks that the first impression he has had was all along definite, just as he latterly comes to perceive it.

It need not be repeated that the multifariousness of creations is due to the diverse actions of the Attributes.

The next question that is started is—whence proceeds the action of the senses? If their action were eternal then the creation would never cease. If not eternal, what is it that causes the operations to begin? The reply given is that all these organs have a certain sort of anxiety for the fulfilment of each other's actions; and this anxiety leads to the action of each of them. There is no external impetus save that of the purpose—discriminative wisdom and hence emancipation—of the Purusha. If there were no action of the different emanations from Prakriti, the Spirit would be at a loss to discriminate between itself and the inanimate Prakriti. So we see that the only impetus from without is supplied to the senses by the purpose of the Spirit, and thenceforward they are led on in their active path by their own anxiety.

Altogether then we see that there are thirteen organs—three internal, Buddhi, Ahankâra and Manas, and the ten external—the ten sense-organs. Of these the latter operate only in the present time, whereas the former act with regard to the past, present and future. Of the external organs, the five subjective senses operate towards subtle as well as gross substances, whereas the objective ones only towards gross ones.

Of the thirteen organs, the palm of supremacy is given to the internal ones, since these are applicable to all kinds of substances; and another cause of supremacy we have already noted—*viz.*, the one with regard to time. Of these internal organs again, the Buddhi is supreme, since the principles of Egoism and Reflection operate towards their objects and then present these experiences to the Buddhi, which finally presents them with its own additions and alterations to the discriminating eye of the Spirit. Thus we find that Buddhi is the chief agent of the Spirit and brings about all his worldly enjoyment, finally leading to His discrimination of self from the emanations of Prakriti, and thence to final liberation. Thus of all the organs, Buddhi is supreme.

Having thus described the organs, we turn our attention towards the gross substances. These are of three kinds—Subtle, Parent-born and the Great Elements. Of these the first is eternal, and the second and third fading and transient.

This "subtle body" of the Sankhyas resembles to a great extent, I believe, the "Astral Body" of Theosophical literature. It is born before the visible body and lasts till the Pralaya; and till then it presents the astral body of the Ego in all its reincarnations during that Kalpa. If this were not so, the actions of one incarnation could not act upon the Spirit in the next, for the Spirit itself cannot be affected by either good or evil, and as such could not be affected by the actions of one incarnation in another. For the actions were done by the body and the organs of the former incarnation; and these dying with the Body, wherein would the traces of the former actions be left? So we must postulate the existence of a substrate in the form of the "Linga-Sarîra," equipped with subtile counterparts of all the sensory and motor organs. And thus then we shall have the Linga-Sarîra imprinted with all the effects of the actions of one birth. And since this body follows the Spirit in all its subsequent incarnations, it is but natural that the fruits of past actions should affect the Spirit;—though the Spirit cannot be affected, yet so long as he has not attained to discriminative wisdom, he thinks all the affections of Buddhi to be his own. The Linga-Sarîra thus must have traces of virtue and vice on itself so as to bring out their effects in a future incarnation. This Linga-Sarîra again is the substrate of the different organs which are subtile in their nature, and as such could not subsist without a substratum.

Let us now see how the Sankhyas treat of the idea of means and consequences of actions. By means of virtue the Spirit ascends to higher regions. By "higher regions" here is of course meant a more highly spiritual life. Vice leads the other way. Emancipation results from discriminative wisdom. This wisdom consists of deep insight into the character of the Spirit and Nature, and consequent intelligent perception of the difference between the two—from which results the Spirit's perception of His own true nature, which is above the operation of the three Attributes, though so long He has been labouring under the self-imposed imaginary thraldom of the Attributes. No sooner has this perception been gained than the Spirit casts off His self-imposed chains and becomes free of the Attributes, and thereby attains to His proper state, which is one of pure uninterrupted and unmixed intelligence. By mere dispassion is gained a state of absorption into the subtler elements of Nature. A Spirit thus transformed enjoys for a time a state of unintelligent rest, and is born again under the same restrictions and with the same bondage as before the absorption. If on the other hand, the Spirit is under the influence of attachments proceeding from the attribute of Passion, then it is that it falls into the stingy darkness of metempsychosis from which it can be freed only by the divine ray of wisdom. We are all labouring under this category.

The Sankhyas have further entered into a very elaborate enunciation of the various manifestations of Buddhi dividing them into no less than fifty forms. These are made up of five kinds of *obstruction*, twenty-eight of *incapacity* (resulting from the disability of the organs), nine of *contentment* and eight of *perfection*. Of these, again there are 62 forms of *obstruction* alone.

So much for intellectual creation. The elemental or material creation comprises the eight kinds of divine celestial beings, the five of the lower animals, and one, the human kind. The various grades of creation are attributed to the excess or otherwise of one of the attributes. Thus the attribute of Goodness predominates among the gods, that of Passion among men, and that of Darkness in all lower creation.

All this elaborate process of creation is begun by Nature solely for the sake of the Spirit's emancipation from the miseries of metempsychosis—miseries inevitable to Him when born in a human body. Nature is described as a great benefactress, not caring for any return of services from the Spirit, and working for His emancipation out of her own sweet will, till He comes to perceive her true character; when She retries from the scene like an actress who has played her part, and never again returns to the same Spirit, the spectator. Thus then in reality all bonds and pains are only supposed by the Spirit to be His own. By His very nature He is free from all internal fluctuations, in as much as He is above the Attributes, whose effect these fluctuations are. After the attainment of discriminative wisdom, the Spirit steers clear of all notions of egoism, and attains to His own natural spiritual condition. But the body continues for a time on account of the impulse previously imparted to it. And the attainment of wisdom having put a stop to the operation of all such agents as virtue &c.—the operation of which is a necessary cause of rebirth—the body falls, and the Spirit regains His true character, and attains to absolute and eternal beatitude, never to return to the cycles of metempsychosis.

THE TATTWA-KAUMUDÎ.

[SÂNKHYA].

AN ENGLISH TRANSLATION.

(1). REVERENCE to the One Unborn, Red, White and Black, producing many children; and also to the Unborn Ones Who have recourse to Her, and renounce Her on having enjoyed the pleasures afforded by Her.

To the Great Rishi Kapila, and his disciple Âsuri, as also to Panchasikha and Iswara-Krishna,—to these we bow in reverence.

Introduction to Kârikâ I.

(2). In this world, that expounder is listened to by the audience, who offers expositions of facts whose knowledge is desired by them. Those, on the other hand, who expound undesired doctrines, are given up by them, as mad men, or as men unacquainted with science and custom. And that science is desirable which being known, leads to the attainment of the final end of man. Consequently, as the science to be (hereafter) explained supplies the means to the final goal, therefore, the author introduces the desirability of the subject-matter :—

KÂRIKÂ I.

There being (in this world) an impediment caused by the three kinds of pain, (there arises) a desire for enquiry into the means of alleviating them. And if (it be urged that) the enquiry is superfluous on account of (the existence of) obvious means,—(we reply that it is) not so: because these (latter) are neither absolute nor final.

Necessity of scientific enquiry.

(3). The subject-matter of science would not be enquired into—(1) if there existed no pain in this world; or (2) if though extant, its removal were not desired; or (3) even if desired, its removal were impossible,—such impossibility arising either from the eternal character of the pain, or from ignorance of the means of alleviating it; or (4) notwithstanding the possibility of removing it, if the subject-matter of science did not afford the adequate means; or (5) lastly, if there were other and easier means elsewhere available.

The three-fold division of pain.

(4). Now, that there is no pain and that its removal is not universally desired, are opposed to facts. With this view, it is declared: "*There being an impediment caused by the three kinds of pain.*" The three kinds of pain constitute (what is ordinarily called) the "triad of pain." And these are: (1) The naturo-intrinsic (*Âdhyâtmika*), (2) The naturo-extrinsic (*Âdhibhautika*), and (3) The super-natural (*Adhidaivika*). Of these the *naturo-intrinsic* is two-fold, *bodily* and *mental*. ***Bodily*** pain is caused by the disorder of the various humours, wind, bile, and phlegm; and *mental* pain is due to desire, wrath, avarice, affection, fear, envy, grief, and the non-preception of particular objects. All these are called *intrinsic* on account of their admitting of internal remedies. Pains submitting to external remedies are two-fold: *extrinsic*, and *superhuman*. The *extrinsic* are caused by men, beasts, birds, reptiles and inanimate things; and the *superhuman* ones owe their existence to the evil influence of planets and the various class of elementals. Thus the fact that pain,—a specific modification of the attribute of Foulness (Rajas)—is experienced by each soul, cannot be gainsaid. "Impediment" (*Abhighâta*) is the connection of the sentient faculty with the consciousness of disagreeableness caused by the three kinds of pain residing in the internal organs. Thus then this idea of disagreeableness constitutes the cause of the desire for the alleviation of pain. . Though pain cannot be absolutely prevented, yet it is possible to alleviate it—as will be explained subsequently. Thus it is concluded that (enquirey is going to be made) "into the means of alleviating it" (the three kinds of pain). In "*Tadapaghatake*" the particle *tat* refers to the three kinds of pain; and though this forms the subordinate factor in the preceding compound, yet it is mentally the more proximate (and hence the following pronoun refers to it in preference to the other and primary factor of the compound). The means of alleviation, too, are only those derivable from science,—and none other.

Objection: Inquiry superfluous in presence of obvious means.

(5). *Objection*: "*On account of obvious remedies, such enquiry is superfluous.*" That is to say: we grant the existence of the triad of pain, and also the desirability of its removal, as also the possibility thereof; we go farther, and grant that the means derivable from the *Sâstras* are adequate to the removal. With all this, however, the present enquiry becomes superfluous; because we have easier obvious means for the removal of pain, and further because of the difficult character of the means prescribed in the *Sâstra*—a full knowledge of abstruse philosophical principles, attainable only by a long course of traditional study extending over many lives. Says a popular maxim: 'When a man can find honey in the house, wherefore should he go to the mountains? So, when the object of desire has been attained, which wise man will make any further attempts?'* Hundreds of easy remedies for *bodily* pain are laid down by eminent physicians; for the mental pains also we have easy remedies in the shape of the attainment of the objects of enjoyment—such as women, desirable food and drink, dress and the like. Similarly of the extrinsic pains we have easy remedies—such as acquaintance with moral and political science, residence in safe places, &c. In the same manner, of superhuman troubles we have remedies in the shape of gems and charms, &c.

---

* *Vide* the *Nyâya-latikâ*, *in loco*.

Reply: Obvious means are not absolute or final.

(6). *Reply:* Not so: "*Because these are neither absolute nor final.*" *Absoluteness* (of the means) consists in the certainty of its effect; and its *finality* consists in the non-recurrence of the pain once removed. The absence of these two properties is denoted by the expression "*Ekântâtyantobhâvah.*" The universal affix *tasi* has a genitive force here. The upshot of the whole is this: On account of not observing the unfailing cure of the different kinds of pain, even on the employment in the prescribed manner of medicines, &c., mentioned before,—we predicate the want of certainty of the cure effected thereby; and similarly from the recurrence of the pain once cured, we infer non-permanence of the cure. Thus, though easily available, the obvious means do not effect absolute and final removal of pain. Consequently, the present enquiry is not superfluous.

Auspiciousness of the beginning word.

(7). Though the mention of the word *pain* in the very beginning is inauspicious, yet that of the extirpatory means as leading to its removal is auspicious; and as such quite appropriate at the commencement of a treatise.

Objection: Vedic means adequate to removal of pain.

(8). *Objection:* We grant the inadequacy of obvious means; but we have others prescribed in the Vedas—such as *Jyotishtoma*, &c.—which last for a thousand years—a whole host of these forming the Ritualistic portion of the Vedas. And these means verily will remove the triad of pain absolutely and finally. Declares the *S'ruti*: "Desiring Heaven one must perform sacrifices:" and Heaven is thus described in the *Bhattavârtika*: "Pleasure, unmixed and uninterspersed with pain, and attainable by pure longing for it, is what is expressed by the word *Heaven.*" Heaven thus consists in pleasure, diametrically opposed to pain, which by its very existence extirpates all kinds of pain; nor is this pleasure short-lived,—for, declares the *S'ruti*: "We drank the *Soma* and became immortal" [*Atharvasiras* III]. And if the celestial pleasure were short-lived, how could there be 'immortality'? Hence the Vedic means for the removal of pain, which can be gone through in a moment, a few hours, a day, a month, or a year,—are easier than discriminative knowledge, which can be attained only by a long course of traditional study extending over many lives. Thus then the proposed enquiry again becomes superfluous.

Reply:

KÂRIKÂ II.

The revealed is like the obvious; since it is connected with impurity, decay and excess. A method contrary to both is preferable,—consisting in descriminative knowledge of the Manifested, the Unmanifested, and the Knowing (Spirit).*

Reply: The Vedic is like the obvious.

(9). "*Anusrava*" is that which is *heard* during the tutorial lectures of a qualified teacher,—and not *done* (written). *Ânus'ravika* = relating to *Anusrava* or *Veda*, that which is known therefrom. The list of religious rites laid down in the Vedas is equal to the obvious (means, mentioned before);—both being equally inefficient in the *absolute* and *final* removal of the triad of pain. Though the text uses the generic term "*Vedic*" ("*Anusravika*"), yet it ought to be taken as implying only the ritualistic portion of it; because descriminative knowledge also forms part of the Veda (which of course is not what the author means). Says the *S'ruti*: "The Spirit ought to be known and descriminated from Primordial Matter" (*Brihadâranyaka* 2-4-5); (by so doing) "the agent does not return, yea he does not return (into this world)" (*Chhândogaya* 8-15).

---

* This Kârikâ embodies, as Davies rightly remarks, the leading principle of Kapila's philosophy, according to which final emancipation is attainable not by religious rites, but by descriminative knowledge as explained by Kapila.

Because impure, decaying and excessive.

(10). Reason for the above assertion is given; "*since it is connected with impurity, decay and excess.*" The *impurity* lies in the fact of the *Soma*-sacrifice, &c., being accompanied by animal-slaughter, and the like. Says the revered Panchasikhâchârya: "It (the sin attendant upon slaughter) is slightly mixed, destructible and bearable." The 'slight mixture' is that of the principal effect (*Apurva, i.e.* merit) of the *Jyotishtoma, &c.*, with the minor *apurva*, the cause of evil, due to animal-slaughter. The epithet '*destructible*' implies that the sin is removeable by certain expiatory rites; but if some how, these are neglected, then at the time of the fructification of the principal Karma (merit), the evil element (demerit, caused by the slaughter) also bears its fruits; and as long as these latter are being experienced, they are borne with patience; hence the epithet '*bearable.*' Experts (in rituals) dangling in the nectar-tanks of Heaven attained to by a host of virtuous deeds, have to bear the spark of the fire of pain brought about by the element of evil (in the rituals).

The impurity of animal-slaughter in a sacrifice, established.

(11). It cannot be urged that the generic law—"Kill not any animal," is set aside by the specific one, "Kill the animal for the *Agnishtoma*"—because they do not contradict each other; and it is only when two laws are mutually contradictory, that the stronger sets aside the weaker. In the present instance, however, there is no contradiction, the two laws treating of two entirely different subjects. For the negative law "Kill not, &c.," only declares the capability of the slaughter to produce evil, and hence pain; but it does not do away with the fact of its being necessary for the completion of the sacrifice; and in the same manner, the following injunction "Kill the animal, &c.," declares the necessity of animal-slaughter in the sacrifice, but does not negative the fact of its being productive of sin. Nor is there any contradiction between the productivity of sin and the capability of helping the completion of a sacrifice. Animal-slaughter can produce sin in the man, and at the same time, quite consistently help a sacrifice.

Non-permanence and excess shown to apply to the results of Vedic action.

(12). The properties—*decay* (*non-permanence*) and *excess*—belong really to the effect; but are here attributed to the means. This *Non-permanence* is inferred from the fact of Heaven being a *caused* entity. Further, *Jyotishtoma*, &c., are the means to the attainment of Heaven only, whereas the *Vâjapéya*, &c., lead to the attainment of the kingdom of Heaven. This is what constitutes the "*excess*" spoken of. The greatness of one's magnificence is a source of pain to another of lesser magnificence.

Immortality as a result of Vedic action is only long-durability.

(13). In the passage "Drinking *Soma*, we became immortal"—*immortality* implies long-durability,—as is declared elswhere: "Immortality is durability till the final dissolution of all elemental (or finite) existence." Hence the *S'ruti*: "Neither by deeds, nor by children, nor by wealth, but by renunciation alone they got immortality" [*Mahânârâyana Upanishad* X.—5]; and again "Swarga shines in a secluded valley at a distance, which the ascetics alone enter. By actions did the ascetics with children, desiring wealth, get death. Therefore those other learned Rishis, who were above all action, got immortality."

The only means is descriminative wisdom.

(14). With all this in view, it is declared: "*A method contrary to both is preferable—consisting in descriminative knowledge of the Manifested, the Unmanifested, and the Knowing.*" *Tasmât* refers to the Vedic means of removing pain. A method,—contrary to the impure Soma-sacrifice, &c., bringing about excessive and short-lived results, —is pure, *i. e.*, unmixed with evils due to animal-slaughter, and leads to results non-excessive and everlasting, as is clear from the *S'ruti* precluding all return to metempychosis for people possessing descriminative knowledge. The argument based on the said result being a caused entity cannot be urged as a ground for its non-permanence; because this holds only in the case of the effect being an entity; in the present case, however, the consequence—the removal of pain—is a negation, a non-entity. And such negation putting an end to causal efficiency, there can be no further effect, in the shape of more pain. For it is a fact admitted on all hands that the causal activity lasts only till the attainment of descriminative knowledge. This will be explained later on. (Kârikâ LXVI.)

Literal meaning of the Kârikâ.

(15). The literal meaning of the *Kârikâ*, however, is this: The means of removing pain, consisting in the descriminative knowledge of the Spirit, as apart from Matter, is different from the scriptural means, and hence is preferable. The Scriptural is good inasmuch as it is authorised by the Veda and as such capable of removing pain to a certain extent. The descriminative knowledge of the Spirit as distinct from Matter is also good. Of these two, the latter is superior.

Source of descriminative knowledge.

(16). *Question*: "Whence does such descriminative knowledge arise"? *Answer*: "*From descriminative knowledge of the Manifested, the Unmanifested, and the Knowing.*" Knowledge of the Manifested precedes that of its cause, the Unmanifested; and from the fact of both of these (Manifested and Unmanifested) being for another's purpose, we infer the existence of the Spirit. Thus then we find that these three are mentioned in the order of precedence of the knowledge thereof. The upshot of the whole then is this: The knowledge of the distinction of Spirit from Matter arises from descriminative knowledge—consisting in meditation and contemplation uninterruptedly and patiently practised for a long time, of the Manifested, &c., previously heard of in the *S'ruti* and *Purânas*, and then established by scientific reasoning. This will be explained in detail in Kârikâ LXIV.

(17). Having thus decided Philosophy to be needful for the enquirer, the author, with a view to commence the work, sets down, in brief, the import of the system, in order to concentrate the attention of the enquirer.

Four-fold division of categories.

KÂRIKÂ III.

"Nature or Primordial Matter, the root of all, is not produced; the Great Principle (Mahat, *i. e.*, Buddhi) and the rest are seven, being both producer and produced; sixteen are the produced; and the Spirit is neither the producer nor the produced."

Briefly, the objects treated of in the system are four-fold. Some of them are merely *productive*, some merely *products*, others *both productive and products*, and others, *neither the one nor the other.*

(18). It being asked —What is the *productive?* The answer is—Nature or Primordial Matter is the root of the Universe, an aggregate of effects; of Matter itself there is no root, or else we would be landed in an unwarranted *regressus ad infinitum.*

The Productive.

(19). How many are the objects that are *both productive and products*, and which are these? The answer is—The Great Principle and the rest are both. As the Great Principle (Buddhi) being the cause of Self-consciousness (Ahankara) is the effect of Nature (Prakriti), so is Self-consciousness

The Productive—Products.

the cause of the five subtle Primary Elements (Tanmâtras) together with the eleven sense-organs, and at the same time, the effect of the Great Principle; and so are the five subtle Primary Elements the cause of the grosser elements, Vril* (Akâsa) and the rest, and at the same time, the effect of Self-consciousness.

The Products.

(20). How many are the *productions*, pure and simple, and what are they? It is said—"*The productions are sixteen*"—*i. e.*, the five gross elements (earth, &c.) and the eleven sense-organs,—these are mere products or modifications not productive. Though cow, pot, trees, &c., are modifications of earth, and so are curd and sprout, of milk and seed respectively, yet these facts do not touch our position; since trees, &c., do not differ from earth, in their *essence*, and it is the productiveness of something different in essence, for which the term '*Prakriti*' stands; and further, cows, trees, &c., do not differ from each other in their essence, since they have, in common, the properties, grossness and perceptibility.

The non-product-productive.

(21). The form of that which is *neither productive nor product*, is now stated. "*The spirit is neither a product nor productive.*" All this will be explained later on.

Three kinds of proofs.

(22). In order to prove the above statements, the different kinds of proof ought to be noticed. Nor can there be a specific definition without a general one. Hence the definition of *proof* in general follows.

---

* Though this translation of the word *Akâsa* is sure to jar upon European ears, as borrowed from a work on fiction (Lytton's "The Coming Race"), yet I have put it in, since I could not find any other word in the English language expressive enough to denote all that is connoted by the Sanskrit word Akâsa. "Inane," "Astral Light," "Ether," "Space," &c., do not sufficiently represent the active character of the Sanskrit *Akâsa*.

KÂRIKÂ IV.

"Perception, Inference, and Valid Testimony are admitted to be the three kinds of proof necessary; because they include all kinds of proof. It is by proof that a fact is ascertained."

Proof defined.

(23). Here, first of all, we have to explain the word *Pramâna*, which explanation would form its definition. Proof, then, is defined as that by which right notion is determined; it thus becomes the cause or means of all correct cognition. This definite right notion is a mental condition free from the contact of all that is either doubtful, self-contradictory or unknown; this comprehension too belongs to the human agent, and the result thereof is right notion; and that which leads to such right notion is *Proof*. Thus the term *Proof* is differentiated from all that leads to wrong notion, *viz.*, doubt, misconception, memory, and the like.

The three-foldness of proof.

(24). The author now rejects the different views with regard to the number of proofs: "*Of three kinds*," —that is—of proof there are three kinds, neither more nor less. This we shall explain in detail after the specific definitions of the particular kinds of proofs.

Only three kinds of proof.

(25). Now, it is asked, which are the three kinds of proof? The answer is—"*Perception, Inference, and Valid Testimony*. The above is an exposition of what is popularly known as proof; and a philosophical system is expounded for the people, since thereto is its province confined. The cognitions of the great sages, though realities, do not, in any way, help those of the ordinary people, and as such are not treated of here.

The inclusion of all other proofs in the above-mentioned.

(26). *Objection.*—We grant that the number of proofs is not less than three; but wherefore should it not be more than three? The different schools do lay down others, as Analogy (Upamâna), &c. *Reply*—"*Since these three include all kinds of proof.*" This will be further explained later on.

Necessity of enquiry into the different kinds of proof.

(27). Now an altogether different question is raised—Why should the philosophic system enquire into the nature and kinds of proof, when it is launched forth with the express purpose of explaining the *Praméya, i. e.*, the subject-matter of proof (*i. e.*, correct cognition)? To this it is replied —"*Since a fact is ascertained only by proofs.*"

[*Siddhi*=determination or ascertainment.]

The order of Explanation.

(28). The explanation of the Kârikâ follows the sense, not the order of the words.

The specific definitions of the proofs.

(29). Now on the occasion of the definition of the special kinds of proofs, the author of the Kârikâ, first of all, defines Perception, since it precedes all other Proofs, Inference, &c., which, therefore, are dependent upon it; and further since there are no two opinions with regard to it.

KÂRIKÂ V.

"'Perception' is definite sense-cognition (*i. e.*, cognition of particular objects through the senses); 'Inference' is declared to be three-fold, and it is preceded by (based upon) the knowledge of the major premiss [asserting the invariable concomitance of the Linga (the Hetu, *i. e.*, the characteristic mark, the middle term,) with the Lingi (the Vyâpakâ or the Sâdhya, *i. e.*, the major term, in which the characteristic inheres] and the minor premiss [asserting the existence of the characteristic in the Paksha, or the minor term]; and 'Valid Testimony' is true revelation (S′ruti)."

The mention of "*Perception*" is only the statement of the term to be defined; the remainder being the *definition*, by which word is meant the differentiation (of the term defined) from things of the same class or species, as well as from those of other classes.

"Perception" defined as the definite cognition of particular objects obtained through the senses.

(30). The literal meaning (of the definition of Perception) may be thus broken up: *objects* (*Vishaya*) are those that bind or connect the subject (*Vishayi*) with their own forms, *i. e.*, they mark out the subject; such are earth, pleasure, &c., belonging to us. The subtle Primary Elements are no objects (of sense) to us, though they are so to *Yogis* and the Gods. '*Prativishaya*' is that which is applied to different objects, *i. e.*, the organs of sense. *Application* here is close proximity, or direct communication,—*Prativishaya*, thus meaning, the sense-organ applied to, or in communication with, the object (perceived); and the definite cognition based on this (proximity) is "*Prativishayâdhyavasâyah.*" This cognition or knowledge, which is the result of an exercise of the Intellectual Faculty (*Buddhi*), is defined as consisting in the preponderance therein, of the attribute of Goodness—following on the subjugation of that of Darkness— resulting from the proximity of the sense-organs to the objects of perception. This proximate existence (Vritti) is also called cognition. This is a Proof; and right notion results from the apprehensions of the sentient faculty by means thereof.

The insentience of the Intellect; and the reflection of the Spirit therein.

(31). Intellect (Buddhi), being a modification of, oremanation from, Nature (Prakriti, Primordial Matter), is insentient; and so, therefore, are its cognitions, jar, &c. And similarly the different modifications or productions of the Intellect—pleasures, &c., are insentient. The Spirit

(Purusha), however, having no real relation with these pleasures, &c., is sentient. This Spirit, being reflected in the Intellect, appears to be actually affected by the cognitions and pleasures, &c., really belonging to the Intellect—which latter, therefore, are said to favour an intelligent entity, the Spirit. Through this reflection in the intelligence of the Spirit, the non-intelligent Buddhi and its cognitions appear endued with intelligence. This will be further explained in Kârikâ XX.

The above definition differentiates Perception from all other forms of cognition.

(32). In the definition, the mention of 'definite *cognition*,' sets aside all doubtful knowledge; because the latter is not definitely comprehended or well-defined, and hence is uncertain. By saying "*objects*," their contraries, all non-entities, are excluded; as by saying '*prati*'—and thereby implying proximity of the sense-organs to the objects—are excluded "Inference," and "Trustworthy Assertion." Thus '*the definite cognition of particular objects*' is a complete definition of Perception, since it serves to distinguish it from all other things of the same, as well as of different classes The definition of "Perception" given by other philosophical systems are neither impugned nor defended, for fear of being too prolix.

Inference is established as a distinct proof.

(33). How can one, denying Inference as a proof,—*viz.*, the Materialist—be certain of the ignorance, doubt or erroneousness of another man? Since, these—ignorance, &c.—are not perceptible to our mortal eyes; nor can any other method of proof be applied to this case, since no other (than Perception) is accepted as such (by the Materialist). And not knowing the ignorance, &c., of others, and thus going about addressing people at random, one would be despised by the enquirers as a mad man. Consequently, (we assert) that the ignorance, &c., of others are *inferred* from such marks or characteristics, as difference of meaning or speech, &c. Thus, however unwilling, the Materialist is constrained to accept Inference as a distinct method of proof.

The definition of *Inference.*

(**34**). And Inference following directly from Perception, its definition must follow close upon that of Perception ; there again, on account of the particular definition being based on the general one, the author gives the latter first—"*It is preceded by* (*a notion of*) *the middle* and major terms;*"—the middle term being the *Vyâpya* or pervaded, and the major term, the *Vyâpaka* or pervader. the pervaded (*Vyâpya*) is that which is brought to its own natural sphere, after the removal of all dubious and assumed conditions; and that by which the *Vyâpya* is thus brought in, is the pervader (*Vyâpaka*). The mention of "the mark and the marked," both of which must be objects, indicates objective or substantive cognition. Inference proceeds from the knowledge of smoke as the pervaded (the mark) and the fire as the pervader (the marked). *Lingi* (the marked) must be twice construed in the definition, in order to imply the minor premiss [in which is stated the relation of the minor term (the *Paksha*), with the middle term (*Hetu*)]. Thus the general definition of Inference comes to be thus:—"*Inference* is (a method of cognition) preceded by (*i. e.*, based on) the knowledge of the relations of the major (*Sádhya*), the minor (*Paksha*) and the middle (*Hetu*) terms with one another." [That is to say, Inference is the knowledge derived from the major and the minor premises].

The three kinds of Inference—(1) The *a priori* (*Purvavat*), (2) The *a posteriori* (Seshavat), and (3) *The inference from the perception of species* (*Sâmânyatodrishta.*)

(**35**). The author now sketches the divisions which have been laid down by other systems also—"*Inference is of three kinds,*" *i. e.*, the special divisions of Inference are three-fold—(i) The *a priori* [Purvavat—the inference of the effect from the cause, as of rain from the gathering of the clouds], (ii) The *a posteriori* [Seshavat—the inference of the cause, from the effect, as of rain from rise in the river], and

---

* *Literally*—"the mark and the marked."

(iii) *Inference from the perception of species or class* [Inference based on relations other than the causal, as of substantiality from earthiness].

The first division of Inference.

(36). First of all, Inference is of two kinds:—(1) The *Affirmative* (*Vita*) and (2) the *Negative* (*Avita*).* That which is based on affirmative concomitance, is *Vita*; and that based on negative concomitance, the *Avita*.

The Negative—The *a posteriori* Inference.

(37). Of these, *Avita* is *Seshavat (a posteriori* or analytic). *Sesha* is that which remains; and the Inferential knowledge having this remainder for its object is called *Seshavat*. As is declared†:—" The cause in question being excluded, and (the qualification) not found elsewhere, the idea of the remaining (object) is *Parisesha*." [Vâtsâyana Bhâshya on the Nyâya Sutras.] Examples of this Avita Inference, founded on negation, will be given later on Kârikâ IX].

The Affirmative—The *a priori* and that from the perception of the species.

(38). The *Vita* is two-fold (1) *Purvavat* (*a priori or synthetic* and (2) *from the perception of species*. Of these *Purva* is that whose object is such as has the characteristics of its species known; and the Inferential knowledge of which this forms the object is *Purvavat*; as from the existence of *smoke* is inferred the existance of an individual *fire* in the *mountain*,—the characteristics of the species 'fire' having been previously perceived in the culinary hearth. The second kind of *Vita*—the Inference based on the perception of the species—is that which has its object, such as has the characteristics of its species (previously) unknown; of this kind are all inferences with regard to the sense-organs; because in all inferences of this kind, the existence of the cause of the perception of colour (*i. e.* vision) is inferred from the fact of its being an effect (and as such necessarily caused). Though the characteristics of instrumental cause in general have been perceived in objects like axes, &c., yet those of the species of the particular kind of such causes—the sense-organs which are inferred to exist as causing the perception of colour, &c.—are nowhere perceived. Nor are the individuals—the particular sense-organs—forming the class 'Sense,' perceptible to our mortal eyes; as are those of the class 'Fire.' In this lies the difference between the *Purvavat* (*a priori*) Inference and the *Sâmânyatodrishta* (Inference based on the perception of the species); though they resemble each other, inasmuch as both are *Vita* (affirmative). Here (in *Sâmânyatodrishta*) *drishta* = *darsâna*, *i. e.*, perception; and *Sâmânyatah* = of Sâmânya, *i. e.*, species or class; *to Sâmânya* is added the universal affix *Tasi.** Thus then the term means—'The Inference, consisting in the comprehension by the individual of a species whose general characteristics are not known.' All this has been fully explained by us in the "*Nyâyavârtika-tâtparyatika*;" and is not repeated here for fear of being too prolix.

---

* The *Vita* has an A proposition for its major premiss; and the *Avita*, an A proposition, converted, *per accidens*.

† As for instance, in a proposed inference of the form—'sound has earth for its substrate, since it is a quality'—the possibility of sound being in earth being excluded on the ground of its never being concomitant with smell, the quality specific of earth; and there being no possibility perceived, of sound residing elsewhere, we have the notion of sound, being a quality specific of Vril (*Akâsa*) as *Parisesha*.

Valid Testimony based on Inference.

(39). Since the comprehension of the connection of words (in a sentence) is preceded by a process of inference with regard to the cause of action of the experienced youth directed, on hearing the words of the experienced director, and further, since the comprehension of the meaning of a word is due to the knowledge of its denotation,—therefore Valid Testimony, is preceded by, and based upon, Inference. Hence, after having defined Inference, the author next defines Valid Testimony.

---

* Here, of course, having the force of the Genitive.

The definition of *Trustworthy Assertion*, given in the Kârikâ, explained.

"Valid Testimony *is true revelation*." Here the mention of Valid Testimony is merely a statement of the term to be defined; the rest forming the definition. 'True' means 'proper;' hence 'true revelation' means 'proper revelation.' '*S'ruti*' is the comprehension of the meaning of a sentence by means of the sentence.

The Self-Evidence of *Sruti*.

(40). This is self-evident. It is true; since all apparent discrepancies and doubts with regard to it are set aside by the fact of its proceeding from the Veda, which is superhuman. Thus also the knowledge obtained from Smritis, Purânas, &c., which are founded on the Veda, becomes true.

Smritis and Puranas included in "Apta-Vachana."

(41). To the primeval Kapila, in the beginning of the Kalpa, we may attribute the reminiscence of the S'ruti studied in his previous birth, as we recollect, after the night's sleep, the occurrences of the previous day. And so did the revered Jaigishavya, in his conversation with Avatta, speak of his reminiscence of his births extending over such a long time as ten Mahâkalpas: "By me, evolving through ten Mahâkalpas, &c."

Pretended revelations set aside.

(42). By saying '*true* revelation,' all pretended revelations such as those of Sâkya, Bhikshu, &c.,—have been set aside. The invalidity of these systems is due to their making unreasonable assertions, to want of sufficient basis, to their making statements contradictory to proofs, and lastly to their being accepted only by *Mlechchhas* or other mean people.

Differentiation of Valid Testimony from Inference.

(43). 'तु' distinguishes "Valid Testimony" from Inference. The meaning of a sentence is the *Prameya* (the fact to be proved): 'sentence' or 'word' is not its property; and as such could not be its mark or predicate. Nor does a sentence, expressing a meaning, stand in need of the comprehension of the connection of the mark and the marked which are the necessary conditions of Inference ; since the sentence of a new poet, previously unknown, expresses the meaning of sentences touching unknown regions.*

The other proofs postulated by other systems shown to be included in the three already defined.

(44). Having thus defined proofs, generically as well as specifically, the other kinds of proofs, Analogy and the rest, postulated by others, can be shown to be included in the above.

Analogy or Upamânâ shown to be included in Apta-Vakya.

(45). *Analogy* (*Upamânâ*) is exemplified as 'The *gavaya* (a species of ruminants analogous to the deer) is like the cow.' But the knowledge produced by this statement is nothing more than that produced by our "Valid Testimony." The knowledge that the term '*gavaya*' denotes some object resembling the cow, is also nothing more than Inference. The object with reference to which experienced persons use a particular term, comes to be denoted by that term, in the absence of any other object (that could be so denoted), *e.g.*, गोत्व (the class 'cow') is denoted by गो. In the same manner experienced people having asserted that "the object denoted by the term, 'gavaya' resembles the cow," the term '*gavaya*' comes to denote something resembling the cow ;—and this knowledge is purely Inferential. The cognition of similarity of the perceived '*gavaya*' with the cow is the result of mere Perception; hence, the cow being recalled to memory, the cognition of the '*gavaya's*' similarity thereto becomes perception, pure and simple. And it cannot be further urged that the similitude† existing in the cow is different from that in the 'gavaya' since the similarity of one species with another consists in both of them having a common mode of the conjunction of their various parts; and this common method of conjunction can be one only; and this being perceived in the '*gavaya*,' must be the same in the cow also. Thus (we find) that nothing is left to be proved where Analogy could be applied to advantage. Hence Analogy is not a distinct Proof.

---

* Whereas, Inference can belong only to objects previously known.

† This is levelled against the assertion of Mandana Misra in his *Mimansanukramani*, that the object of analogy is not either the *gavaya* or the cow, but the similarity of the one in the other, which cannot be said to be amenable to perception.

Apparent Inconsistency (Arthâpatti) shown to be included in Inference.

(46). Similarly Apparent Inconsistency (Arthâpatti) is not a distinct Proof. For the case of the assumption of the living Chaitra being outside, when he is not found at home, is cited as an instance of Apparent Inconsistency. To us, Sânkhyas, this is nothing more than Inference. A particular object being non-pervading or finite, when not found in one place, must be in another. The major premiss—in the form, that a finite object being in one place cannot be in another—is easily got at, with reference to our own bodies. Similarly the cognition of the external existence of an existing object, is inferred, from the mark of its not being *in* the house; and this process is purely Inferential. Chaitra's existence somewhere else cannot set aside the fact of his non-existence in the house; and as such, non-existence in the house could, very reasonably, be urged as a reason for his being outside. Nor does the fact of his non-existence in the house cut off his existence altogether; and consequently his entity could be said to retain itself outside. For Chaitra's non-existence in the house contradicts either his existence *in toto*, or merely his existence in the house. The former alternative cannot stand, the subjects of the two propositions being different.* If you say that by the general assertion—"he must be *somewhere*" (without any definite place being mentioned), any particular place—even the house—may be implied; and as such the non-existence *in the house* becomes uncertain; and thus there being co-objectivity between the two propositions noticed above, they would contradict each other,—we reply: No: because the non-existence in the house having been ascertained by evidence—of Perception in the present instance—cannot be set aside, on the ground of uncertainty, by the *doubtful* fact of his existence therein. It is not proper to assert that his proved non-existence in the house, while overthrowing his uncertain existence therein, would set aside his existence *in toto* and set aside all doubt (of his existence in space). Because Chaitra's existence *in the house*, being contradictory to his proved non-existence therein, is overthrown by this latter; not so his existence *in toto*; since this latter fact is altogether disconnected with the non-existence *in the house*. Thus it is very proper to say that the external existence of an entity is inferred from its characteristic of internal non-existence. Hence the assertion—that the subject of *Arthâpatti* is the removal of contradiction after due consideration of the strength of two contradicting proofs—is set aside; for there is no real contradiction between the particular (the proof of non-existence in the house) and the general (that of mere existence). The other examples of *Arthâpatti* may similarly be shown to be included in Inference. Hence it is established that Apparent Inconsistency (*Arthâpatti*) is not a proof distinct from (Disjunctive) Inference.

---

* It is only when two statements are made, with regard to one and the same subject, that they contradict each other; which is not the case in the present instance.

Negation (Abhâva) shown to be included in Perception.

(47). *Negation* (*Abhâva*) again is nothing more than mere Perception. The Negation of a 'jar' is nothing more than a particular modification of the Earth characterised by (its) absence. Since all existences, with the single exception of Consciousness or Intelligence (*Chit—Sakti*), are momentarily undergoing modifications, all of which are perceptible to the senses; therefore there is no ground left uncovered by Perception for which we should postulate a distinct proof in the shape of Negation (*Abhâva*).

Probability (Sambhava) shown to be included in Inference.

(48). "Probability" (*Sambhava*)—*e. g.*, the knowledge of the existence of lesser weights in greater ones—is also an instance of Inference. The heavier weight is known as not capable of existing without the lesser ones; and this fact leads to the belief in the existence of the latter in the former.

Rumour (Aitihya) discarded, as affording doubtful testimony.

(49). That is called "Rumour" (*Aitihya*), by the Sankhyas, whose first speaker is unknown, and which is handed down by mere tradition—*e. g.*, 'a *Yaksha* resides in the Vata tree.' This —Rumour—is not a proof; since it is doubtful owing to the fact of the first speaker being unknown. "Valid Testimony," however, is that of which the speaker is known to be veracious. Thus the three-foldness of proofs is established.

(50). Thus have been defined severally the different kinds of proof, with a view to demonstrate the existence of the *Manifested*, the *Unmanifested* and the *Knowing*. Of these, the *Manifested*—earth, &c.,—are perceptible in their true form, even to the common ploughman. And similarly the *a priori* Inference with regard to the existence of fire in the mountain, could easily be arrived at through the mark of the smoke. Such being the case, a system of philosophy, propounded for the sake of these, loses much of its importance and necessary character. Hence what is difficult to be got at (by ordinary methods) should be explained by philosophy. Consequently the cases of application of the different proofs are laid down.

KÂRIKÂ VI.

The cases of application of the different proofs.

Knowledge of supersensuous objects is obtained through Inference—the *Sâmanyatodrishta*. What is not proved by this is proved by revelation.

(51). The particle च distinguishes the *Sâmânyatodrishta* from Perception and Inference *a priori*. Through the *Sâmânyatodrishta* Inference there arises knowledge of *Pradhâna** (Primordial Matter or Nature), and the Spirit both of which transcend the senses,—and this knowledge is due to the operation of Buddhi reflected in Consciousness *Chaitanya* (belonging to Spirit). The above implies the application of the *Seshavat* (Negative) Inference also.

(52). Then, does the *Sâmânyatodrishta* Inference alone apply to all objects transcending the senses? If so, we shall have to deny the existence of the Great Principle (Mahat), &c., as also of Heaven, Destiny and the Gods in heaven, in the case of which the inference does not apply. Hence it is said —"*By this, &c.*," and as a simple "by this" would suffice to give the required meaning, the 'च' must be taken as referring to *Seshavat* (Negative) Inference.†

(53). *Objection*—Granted all this. But the non-perception of such objects as 'sky-flowers,' &c., leads to their being accepted as non-entities; in the same way we might infer the non-existence of Nature, and the rest (which are like sky-flowers not amenable to perception). This being the case, why have recourse to the various kinds of Inference for the sake of these latter?

---

* Henceforth Pradhâna, Prakriti or Avyakta will, for the sake of simplicity, be translated as 'Nature.'

† There is a difference of opinion among Commentators as to the explanation of this Kârikâ, especially the first half of it. Vâchaspati Misra, as we have seen, explains it as—'we have a knowledge of supersensuous objects, through the *Sâmânyatodrishta* Inference.' Gaudapada takes it the same way. But Nârâyana Tirtha explains thus—"In '*Sâmânyatah*,' the affix '*tasi*' is substituted for the genitive case-termination. Thus the meaning is that of all (generic) objects amenable to the senses, we have a knowledge from *Perception*, &c." This last is the sense accepted by Davies in his translation. But the former interpretation appears to be the more reasonable. Because it cannot be said that Inference does not apply to objects amenable to the senses. Davies, in a foot-note *in loco*, says that '*Sâmânya*,' "does not mean, &c." But he loses sight of the fact that "*Sâmânyatodrishta*" is the technical name of a particular kind of Inference.

The reply is—

KÂRIKÂ VII.

"(Non-perception arises) from excessive distance, extreme proximity, destruction of the sense-organs, absence of mind (inattention), subtlety (or minuteness), intervention (or the existence of some intermediate barrier), predominance (of other objects), and from intermixture with with other like objects."

(**54**). The "non-perception" of the following Kârikâ is to be construed along with this, in accordance with the maxim of the "looking (back) of the lion."*

The different causes of the non-perception of objects, explained.

A bird soaring high, though existing, is yet not perceived on account of *extreme remoteness.* 'Extreme' (*ati*) must also be taken with 'proximity' (*sâmipya*)—*e. g.*, the non-perception, through extreme nearness, of the collyrium (anjana) in the eye.

"*Destruction of organs*" —*e. g.*, blindness, deafness, &c.

"*From absence of mind*"—As a person, under the influence of (some very strong) desire, &c., does not perceive objects, even in bright daylight, though quite within the range of his senses.

"*From Minuteness*"—As for instance, however, much we may concentrate our mind (*i. e.*, however attentively we may look) we can never perceive atoms, though under our very eyes.

"*From Intervention*"—*e. g.*, one cannot see the Queen behind the walls.

---

* "The maxim of the lion's (backward) glance, is generally used to mark the connection of a thing with what precedes and follows." [*Vide.* The *Nyaya-Latika in loco.*]

"*From subjugation or suppression*"—*e. g.*, the non-perception of the constellations, suppressed by the brighter rays of the sun.

"*From intermixture*"—as one does not preceive drops of rain-water, disappearing in a tank.

(55). The च in the Kârikâ has a collective force, implying even those not here mentioned; such as '*non-production*' is also among the causes of non-perception—as one cannot perceive, in the milk, the curd, not yet produced therefrom.

(56). The upshot of the whole then is, that the non-existence of a certain object cannot be inferred merely from the fact of its not being perceived; for there is danger of the principle being unwarrantably stretched too far. Thus, for instance, a certain individual, getting out of his house, can never be he said to be assured of the non-existence of the inmates, simply on the ground of his not seeing them. The fact is that it is only with reference to objects capable of being perceived on the occasion, that non-perception leads to the inference of their non-existence, And this capability of being perceived can never belong to Nature &c., (which are by their nature imperceptible); and as such it is not proper for intelligent men to infer their non-existence merely from their non-perception or imperceptibility.

Question—Which of the above—mentioned causes (of non-perception) applies in the case of Nature, &c.? The *reply* is—

KÂRIKÂ VIII.

The non-apprehension of Nature, due to subtlety and not to non-existence Its existence verified by its effects.

The non-apprehension of this (Nature) is due to its subtlety, not to its non-existence; since it is apprehended through its effects. These effects are the Great Principle, and the rest—effects (some of) which are similar, and (some) dissimilar to Nature.

(57). Why should we not, continues the objector, attribute the non-apprehension of Nature to its non-existence, as we do of the seventh kind of unction (in rhetoric)?

The Author replies.—"*Not due to its non-existence.*" Why? "*Because it is apprehended through its effects.*" *It* refers to Nature. The proofs of the apprehension of the Spirit will be mentioned later on, in Kârikâ XVII. If we find direct perception inapplicable in the case of objects, whose existence is ascertained by means of evidence other than that afforded by perception itself, we at once infer the inapplicability to be due to incapacity* (and not to non-existence of the object itself).† The seventh unction on the other hand, has not its existence ascertained by any proof, and as such, the incapacity of perception cannot be urged in its case.

(58). Granted all this, but which are the effects from whose existence, you infer that of Nature? The reply is—"*The Great Principle, and the rest are the effects.*"

This will be proved later on (Kârikâ XXII.) Next are mentioned the similarity and dissimilarity in form, of these effects, with Nature—the comprehension of both of which is auxiliary to discriminative knowledge:—"*Similar and dissimilar to Nature.*"

This division will be further treated of in Kârikâ XXIII *et. seq.*

Different views with regard to the nature of the effect. (1). The Bauddha view of the effect being an entity arising from non-entity. (2). Vedanta view of the whole series of effects being a mere

(59). From (the existence of) the effect is inferred (that of) the cause:—on this point there is diversity of opinion. Thus some philosophers (the Bauddhas) assert the production of entity from non-entity. Others (the Vedantists) represent the whole evolution from a single real entity. (3). The Nyaya and Vaiseshika view of the effect being a non-entity arising from entity. (4). The Sânkhya view of the effect being an entity arising from an entity.

---

* On the part of perception.

† This statement is with reference to Nature, the existence of which is proved through its effects—the proof being based on the general proposition "Every effect must have a cause." The effects, Mahat, &c., are perceptible these must have a cause, and this cause is Nature.

series of effects as a mere evolution from a single entity, and not a real entity in itself. A third set of philosophers (the Nayâyikas) hold the production of non-entity from entity. The Sânkhyas lastly teach that from entity emanates entity.

The impossibility of the existence of nature being proved in accordance with the first three views.

(60). Now, we cannot establish the existence of Nature, in accordance with the first three theories. The Universe consists essentially of sound, &c., which are different forms and modifications of pleasure, pain and delusion,—and as such bears testimony to the character of Nature, which lies in its being constituted by goodness, passion and darkness. Such being the case, if we assert the production of entity from non-entity (the Bauddha view) [we would land ourselves in an absurdity] *viz.*, how could the cause, an undefinable (unreal) non-entity, consist of sound, and the rest which are different forms of pleasure, &c.? For, certainly we cannot hold the identity of entity and non-entity (two opposites). Nor could the doctrine of the emanation of entity from entity (the Sânkhya view) be upheld in accordance with the theory that the phenomena of sound, &c., are mere evolutions from a single entity (the Vedânta view). Nor again could we attribute phenomenality (or changeability) to the single; in fact the notion of such phenomenality (changeableness) with regard to the unphenomenal (unchangeable) would be a mistake. Even in the theory of Kanâda and Gautama, who maintain the production of non-entity from entity, the existence of Nature cannot be proved; since, according to them, the cause is not identical with the effect, inasmuch as entity and non-entity are diagonally opposed to each other.*

---

* According to the Nayâyikas the cause is an entity, the effect a non-entity; and since an entity and a non-entity cannot be identical, therefore the cause and the effect cannot be identical.

(61). Hence, in order to establish the existence of Nature, the author first declares the effect to be an entity, (even prior to causal operation).

KÂRIKÂ IX.

The five proofs of the effect being an entity.

The effect is an entity ; (1) because a non-entity can never be brought into existence ; (2) because of a (determinate) relation of the cause (with the effect) ; (3) because everything cannot be possible (by any and every means) ; (4) because a competent (cause) can do (only) that for which it is competent ; and (5) lastly, because the effect is non-different from the cause.

The Bauddha view refuted.

(62). The effect is an entity—that is to say, it is so even prior to the operation of the cause. Against this theory, the Nayâyikas cannot urge the fault of the absurdity of the production of an already existing object. Because though the production of the sprout and the jar is consequent upon the destruction of the seed and the lump of clay respectively, yet causal energy can only be attributed to an entity in the shape of the seed, and not to its destruction [a kind of negation, a non-entity]. Further if you assert the production of entity from non-entity, this latter, being at any time available, would give rise to the (absurd) possibility of any and every effect being produced at any and all times. All this has been explained by us in the *Nyâyavârtikatâtparyatîkâ.*

The Vedânta view met.

(63). The belief in the existence of the phenomenal world cannot be said to be illusory unless we have some proof invalidating its existence.*

---

* This is urged against the Vedânta theory of the effect being an evolution from a single real entity.

The Nyâya and Vaiseshika view criticised; and the Sânkhya view established.

(64). Now remains the theory of Gautama and Kanâda, with reference to which the author asserts—" *The effect is an entity.*" In support of this assertion, the following proofs are adduced :—(1) " *Since a non-entity can never be brought into existence.*" If the effect were a non-entity before the operation of the cause, it could never be brought into existence by anybody. By even a thousand artists blue can never be made yellow. If you assert entity and non-entity to be mere properties belonging to the jar, then in that case, the qualified object (the jar) being non-existent, no property could belong to it; and as such the entity the (property) remains in the same condition (*i. e.*, cannot be attributed to the jar). Nor can non-entity (as a quality) be attributed to it. For, how can non-entity belong to the jar (as a property) when it is neither in any way related to it nor cognate to it ? Hence as after the causal operation, so too before it, the effect subsists.

Such being the case, all that remains to be done by the cause is the manifestation or unfolding of the pre-existing effect [*i. e.*, its emanation from the cause wherein it has been lying latent]. The manifestation of something existing beforehand is a fact quite compatible with experience ; as of the oil from sesamum by pressure, of rice from paddy by thumping, and of milk from cows, by milking. On the other hand, we have no instance of the manifestation of a non-entity ; for a non-entity is never seen to be either manifested or produced.

(65). (2) For the following reason also does the effect subsist before the operation of the cause : " *Because of a (determinate) relation of the cause with the effect.*" That is to say, the effect subsists because of the relation holding between itself and its material cause. That is, the cause produces the effect when in relation with it ; and (we all know) that no relation with a non-existing effect is possible ; hence the effect must be an entity.

(66). Granted all this; but, continues the objector wherefore is the effect not producible by causes unconnected therewith? We reply, that under such circumstances, only non-entity would be produced. With this reply in view the author lays down :—

(3) "*Since everything cannot be possible.*"—If the effect unconnected with the cause could be produced (by that cause), then every effect would arise from every cause (without restriction), there being no other limitation save that of unconnectedness (which any cause can have with reference to any effect.) But such is not the case. Hence a connected effect only can be produced by a connected cause, and not an unconnected effect by an unrelated one :—as say the Sânkhyas—"There is no relation of the cause, imbued with entity, with non-entity; those holding the production of an unconnected effect will land themselves in a *regressus ad infinitum.*"

(67). *Objection:* Be it so: But an entity, though unrelated, will always produce the effect for which it is competent; and this competency too could be inferred from the presence of the effect, and as such we sail clear of the *regressus ad infinitum.*

Reply: (4) "*Since a competent cause does that for which it is competent.*"—Now then, asks our author, does this '*Capability* or *competency*' belonging to the cause imbued with the causal energy, apply to every effect or only to those to which the cause is competent? If the former, then the same confusion arises; if the latter, then the following question will arise—how does the energy apply to non-entity? On this point if it be asserted that the (causal) energy itself is so constituted as to produce only certain effects, not others; then we ask—Is this peculiarly constituted energy of yours connected with the particular effect or not? In the former case, no relation being possible with a non-entity, the effect must be an entity: in the latter, you have the same endless series of causes and effects. Hence it is reasonably declared that (the effect is an entity) "*because a competent cause can only produce an effect for which it is competent.*"

(68). (5) For the following reason too is the effect an entity: "*Since the effect is connate (non-different) with the cause.*"—The effect is not different from the cause; and the cause is an entity; then how can the effect, non-different from this latter, be a non-entity?

Proofs of the non-difference of cause and effect.

(69). The proofs establishing the non-difference of cause and effect are the following: (*a*) The cloth (an effect) is not different from the threads (its material cause), since it is a property characteristically inhering in the latter [*i. e.*, since the cloth inheres in the threads constituting it]. An object differing in its essence from another, can never inhere in it; as the cow in the horse; but the cloth is inherent in the threads; hence it is not different from it in its essence. (*b*) Owing to the causal relation subsisting between the cloth and the thread, they differ not in essence; because the causal relation can never subsist between objects essentially different from one another—*e. g.* between jar and cloth. But between cloth and threads we do find the causal relation subsisting; hence they can never differ from one another, in essence. (*c*) For the following reason also, there is no difference between cloth and threads: because of the absence of junction and non-contiguity between the two. We see junction taking place between objects differing from one another, as between a pool and a tree; the same with regard to non-contiguity, as between the Himavân and the Vindhya. In the instance before us, however, there is neither junction nor non-contiguity, and as such, no difference in essence. (*d*) For the following reason too, cloth and thread do not differ in essence: because of the non-inclusion (in the particular effect) of any (other) effect different in weight (from the cause). As a matter of fact, an object differing in essence from another always has a weight different from that of the latter—*e. g.* the lowering of the balance caused by two *palas** is more than that caused by a single *pala*. But we find no such difference between the effects of the weight of the cloth and those of the weight of the threads constituting it. Hence cloth is non-different from the threads. These are the proofs afforded by a process of negative inference [*Avitânumâna*—see, *Kârikâ* V] establishing the non-difference (of cloth and threads in particular, and of cause and effect in general).

(70). The non-difference being thus established, (it is decided that) the cloth is only a particular development of the threads combining themselves in various ways; and that the two do not differ from each other in essence. No essential difference can be proved on the ground of self-contradictory actions in themselves (*i. e.*, the effects), (difference apprehended in) language, or the difference in action (of the cause and that of the effect).† Because these differences do not contradict each other, when we see that they are brought about by the appearance and disappearance of particular conditions—as for instance, the limbs of the tortoise disappear on entering its body and appear again on emerging from it; but for this, we cannot say that the limbs are either produced from, or destroyed by, the tortoise. In the same manner, jar, crown, &c., which are only particular developments of clay, gold, &c., on emanating from these latter, are said to be produced; and on entering them again (*i. e.*, being changed into clay, &c.,) hey disappear and are said to be destroyed.

---

* A particular weight.

† *Self-contradictory actions in themselves.* When the cloth is reduced to threads, we say 'the *cloth* is *destroyed*, and the *threads* are *produced*;' now *destruction* and *production* are diagonally opposed; and as such cannot be predicated of the same thing at one and the same time; but we do predicate *production* of the *threads* and *destruction* of the *cloth* at one and the same time. So they differ.

Difference apprehended in language—as when we use such sentences as—"Cloth is made of threads."

Difference in action—Thus we see that *cloth* can *cover* an object which certainly the threads cannot. And objects differing in their action must differ in essence.

These three are the objections brought forward against the theory of the non-difference of cause and effect. Each of these is considered and refuted separately in the following lines.

The Bhagavadgitâ supporting the Sânkhya view.

or again can a non-entity ever be produced or an entity destroyed; as says the revered Krishna-dvaipayana:—"There is neither an existence of non-entity, nor non-existence of entity" [*Bhagavadgitâ* II—16]. As the tortoise is not different from its own contracting and expanding limbs, so also are jar, crown, &c., not different from (their material cause), clay, gold, &c. The assertion "cloth is in (*i. e.*, made of) threads," is as consistent as the assertion—"Tilaka trees in this forest."*

(71.) Nor does difference of purpose and action establish difference in essence; since a single substance can have manifold functions, as the fire alone can burn, digest and give light. Nor is fixity of purpose and action a ground of difference among substances, ; for we see that this fixity varies in the substances themselves, taken singly or collectively; as a bearer, in company with other bearers, can carry the palanquin, which he can never do when alone. Similarly, the threads though unable to *cover*, when taken singly, yet do *cover* when conjoined and thus having their existence as cloth manifested (*i. e.*, having developed into cloth).

An objection,—based on the nature of the *manifestation* of the effect.

(72). *Objection*:—Granted all this. But, is the *manifestation* or *appearance* itself an entity or a non-entity, prior to the operation of the cause? If the latter, then you admit the production of non-entity. If, however, you hold to the former alternative, then have done with the causal agency altogether; for we do not see the necessity of the causal operation when the effect already exists. If you assume the manifestation of the manifestation, you will be landed on a *regressus ad infinitum*. Hence the assertion, that 'the threads are made to have their existence as cloth manifested,' is invalid.

---

* As the Tilaka trees, constituting the forest, are nothing besides the forest itself; and yet we speak of the "Tilaka trees in the forest," so with the assertion with regard to the cloth and threads.

Reply—The objection set aside as common to both theories.

(73). To all this we make the following reply. Even on your own theory of the production of non-entity, we ask—what is this '*production*'—? An entity or a non-entity? If an entity, then have done with the agency of the cause; if, however, you assert it to be a non-entity, you will have to postulate the production of that production and so on *ad infinitum*[and such being the case, the fault of *regressus ad infinitum* you urged against us, loses its force, since it is common to both of us; and consequently it is not fair to urge it against one].*

(74). If, in order to avoid the *regressus ad infinitum*, you declare that the production is nothing more or less than the cloth itself;—then the notion of *cloth* would coincide with that of *production*; and as such, on saying *cloth*, one should not add *is produced* (because it would be a useless repetition); nor could he say the *cloth is destroyed*; because *destruction* and *production* (denoted by *cloth*) can never coexist.

(75). Consequently, we have only two alternatives: the *production* of the cloth must inhere either in its material cause (the threads), or in its mere *existence* (*Sattâ*). In either case, the cloth cannot be produced without the operation of causes. Thus it is proved that the operation of the cause is necessary for the manifestation of already existing effects. (If you urge against us the common saying—'causes do (produce) the forms of cloth"—then we reply that) the causes have no relation with the forms of cloth; because these *forms* are not *actions*, and it is only with actions that causes are related; or else they lose their character.

---

* This point has been discussed by S'ankarâchârya, in his Bhâshya on the Vedânta Sutras, under the aphorism "*Swapakshadoshâchcha*."

(76). Thus then it is proved that the effect is an entity.

---

(77). Having thus proved the effect to be an entity, a fact favourable to the doctrine of the existence of Nature, the author next states the similarity and dissimilarity between the Manifested and the Unmanifested, a right comprehension of which appertains to discriminative knowledge; and this is done in order to show the character of Prakriti, whose existence is to be proved.

KÂRIKÂ X.

Points of dissimilarity between the Manifested and the Unmanifested.

The Manifested has a cause: it is neither eternal nor pervading (*i. e.*, universal); it is active (*i. e.*, mobile or modifiable), multiform, dependent, predicative (or characteristic), conjunct and subordinate. The Unmanifested is the reverse.

All the qualifications explained.

(78). "*Hetumat*"—*i. e.*, having cause. The question as to what is the cause of what, will be dealt with later on (Kârikâ XXII).

(79). "*Not Eternal*"—*i. e.*, destructible, revolving [returning to the condition of its material cause*].

(80). "*Not pervading*"—that is to say, the Manifested does not extend over all evolving or developing substances. The effect is pervaded by the cause but not *vice versâ*, *e. g.*, Consciousness (Buddhi) can never pervade Nature (Prakriti), and as such is non-pervading.

(81). "*Active*"—*i. e.*, mobile. Consciousness (Buddhi), &c., have mobility inasmuch as they renounce certain bodies they have hitherto occupied, and occupy others;

---

* Since the Sânkhyas do not admit of an utter annihilation of a substance.

as for the mobility of earth, &c., it is too well known to need an explanation.

(82). "*Multiform*"—Since Consciousness &c., differ in different individuals; earth, &c., too are multiform in the shape of jars, &c.

(83). "*Dependent*"—On its cause; though the effect is non-different from its cause, yet the assertion of the relation of subserviency is based upon a difference conventionally accepted; as we say—"the Tilakas in the forest."

(84). "*Characteristic or predicative*"—*i. e.*, of Nature. Consciousness (Buddhi), &c., are characteristics of Nature, which cannot be its own characteristic, though it can be so of the Spirit (Purusha).

(85). "*Conjunct*"—Bearing in itself the relation of whole and parts. Conjunction consists in approach preceded by (*i. e.*, after) non-approach; and connection with such approach of the whole to the part is what is connoted by "*conjunct*;" as for instance, earth, &c., conjoin among themselves, and so do others. On the other hand, there is no conjunction of Nature (Prakriti) with Consciousness (Buddhi), since the two are connate (and as such there can be no non-approach); nor is there reciprocal conjunction among Goodness, Foulness and Darkness, since there is no non-approach among them [since they all conjointly inhere in Nature].

(86). "*Subordinate*"—Consciousness stands in need of the aid of Nature in the completion of the production of its effect, *Self-consciousness* (Ahankâra). Without this aid, being by itself too weak, it could not be efficient to produce its effect. Similarly do Self-consciousness and the rest stand in need of similar aids in the production of their several effects. Thus, each and all stand in need of the perfecting hand of Nature. Hence the *Manifested*, though efficient in the production of its effects, is yet subordinate, inasmuch as it stands in need of the aid of the Supreme Nature (the highest in the scale).

(87). "*The Unmanifested is the reverse*"—*i. e.*, of the Manifested. That is to say—the Unmanifested is uncaused, eternal, pervading, and inactive (immobile)—though to Prakriti does belong the action of evolution (or development,) yet it can have no mobility—single, independent (self-sufficient), non-predicative, unconjunct, compact (*i. e.*, not made up of parts), and non-subservient (supreme).

(88). Having thus explained the dissimilarities of the Manifested and the Unmanifested, the author now mentions the similarities between these, and the dissimilarity of both of these again from the Spirit:

KÂRIKÂ XI.

The points of similarity between the Manifested and the Unmanifested and those of dissimilarity of these from the soul.

The Manifested has the three constituent Attributes (Gunas), it is indescriminating, objective, generic (or common), non-intelligent (or insentient) and productive. So also is Nature. The Spirit is the reverse, and yet also (in some respects) similar.

(89). "*Having the three constituent Attributes.*"—That is to say, the Manifested is possessed of the three attributes of pleasure, pain and dulness. By this assertion are set aside all the theories attributing pleasure and pain to the Spirit.

(90). "*Indescriminative*"—*i. e.*, as Nature is not descriminated from itself; so too the Great Principle (Mahat or Buddhi) being connate with Nature, cannot be descriminated from it. Or *indescriminativeness* may mean merely *co-operativeness*: nothing singly (among the Manifested) can be a cause efficient for its effect; it can be so only when in company with others; and as such no effect is possible from any cause taken singly by itself.

(91). Some (the Vijnâna-Vâdi Banddhas) assert that it is *Idea* (Vijnâna) alone that is denoted by the words pleasure, pain and dulness; and that there exists nothing besides Vijnâna that could possess these (pleasures, &c.,) as its attributes.

An objection based on the Idealism of the Banddhas.

In opposition to this view it is laid down that the Manifested is "*objective*" (=perceptible). That is to say—it is so outside (and as such over and above) Vijnâna, and as such it is "*Common*"—*i. e.*, perceived (simultaneously) by many persons. If, however, these were nothing more or less than Vijnâna, then in that case, this latter being uncommon (or specifically belonging to particular individuals), all the Manifested elements would be so also; for the Vijnâna of one person can never be perceived by another, owing to the imperceptibility of any intellect other than the agent's own. On the contrary, in the case of a Manifested substance (such as) the glances of a dancing girl, the attentiveness of many persons to that single object is quite a consistent fact, which it could not be if we were to reduce all existence to mere *Idea* or Vijnâna.

The Idealistic objection set aside.

(92). "*Non-intelligent or Insentient.*"—Nature (Prakriti), Consciousness (Buddhi), &c., are all non-intelligent. We do not, like the Vainâsikas (a scion of the Banddhas) attribute intelligence to Buddhi.

(93). "*Productive or Prolific*"—*i. e.*, possessed of the faculty of producing or developing. The particular possessive affix (*Matu*) is used in order to denote the constant character of the property of productiveness with regard to the Manifested. That is to say, these are ever accompanied by their several emanations or developments, whether similar or dissimilar.

(94). "*So also is Nature*"—*i. e.*, as the Manifested is, so is the Unmanifested Nature. That is to say, the properties of the *Manifested*, just enumerated, belong to Nature also.

(95). The dissimilarity of these from the Spirit is stated—*Reverse is the Spirit.*"

Objection—There are points of similarity also between the soul and the Manifested as well as the Unmanifested.

Objection:—Granted all this: But how can you assert the Spirit to be the reverse of the Manifested and the Unmanifested; when we see that there are points of similarity between the Spirit and the Unmanifested—such as Uncausedness, Eternality, &c.,—and also between the Spirit and the Manifested—such as plurality?

The objection conceded to-there are points of similarity as well as of dissimilarity.

We reply: "*Yet also*"—that is to say, though there are points of similarity, such as uncausedness, &c., yet there are points of dissimilarity also, in the form of non-possession of the triad of attributes (Gunas), and the rest.

(97). The Manifested and the Unmanifested have been described as having 'three Attributes'.* Now the author names and describes these three Constituent Attributes:

---

* This word Attribute requires some explanation. It stands for the ***Gunas*** of the Sânkhyas—a term denoting the constituent elements of Nature or Primordial Matter;—as says Colebrooke—"These three qualities are not mere accidents of Nature, but are of its essence and enter into its composition." On this Davies very rightly remarks—"Nature or Primordial Matter is described, in the system of Kapila as formed by the *Gunas*, which were primarily in equilibrium, and so long as this state existed, there was no emanation into separate forms of matter." And, as we shall see later on, the intert condition of Nature is disturbed by the subsequent predominance of the Attribute of Foulness (Rajas). Davies has rendered this important word—*Guna*—by *Mode*. I am afraid this is apt to mislead. For *Mode*, as understood by Western philosophers, is an affection of a substance, "a quality which it *may have or not, without affecting its essence* or existence." Now, as we have seen the *Guna* of the Sânkhyas is almost the reverse of this—it belongs to a substance as constituting its very essence. I have perferred to translate *Guna* as *Attribute*—using the latter term in the sense imparted to it specifically, by Spinoza, who thus distinguishes between *Attribute* and *Mode*: "By *Attribute*, I understand, that which the mind perceives of substance *as constituting its essence*. By *Mode*, I understand, the affections of substances, &c.," (the italics are mine).—G. J.

KÂRIKÂ XII.

The Attributes are of the nature of love, aversion, and stupefaction. They are adapted to illumination, activity, and restraint; and they mutually subdue, and support, and produce each other and consort together (for one purpose).

The character of the three Attributes (Gunas).

(98). These are called *Gunas* (literally, subsidiary or secondary) because they exist for the sake of others (the Spirits). The three Attributes will be named in order in the next Kârikâ. And according to the maxim of presight, common among writers, the "love, &c.," of this Kârikâ are to be taken in the same order (as "Goodness, &c.," in the next).

(99). Thus then, "*priti*" (love) being (a form of) pleasure, the attribute of Goodness is of the nature of pleasure; "*Apriti*" (aversion) being (a form of) pain, the attribute of Foulness (Rajas) is of the nature of pain; and, lastly, "*Vishâda*" being (a form of) stupefaction, the attribute of Darkness is of the nature of stupefaction. The word '*Âtmâ*' is inserted in order to guard against the theory that *pleasure* is nothing more than mere negation of pain, and *vice versâ*. Pleasure and pain are not negations of one another; on the contrary, they are entities independent of one another. Thus "*aprityâtma*" means one whose existence (not non-existence) consists in love or pleasure; "*vishâdâtma*" and "*aprityâtma*" may be similarly explained. The fact of pleasure and pain being entities by themselves, and not mere negations of one another, is one of common experience. If they were mere mutual negations, they would be mutually dependent; and thus the non-fulfilment of one would lead to that of the other.

(100). Having thus described the nature of the Attributes, the author next lays down their several functions—"*They are adapted to illumina-*

Their functions.

tion, activity, and restraint." Here, too, the three members of the compound are to be construed in the same order as before. Foulness (Rajas), in accordance with its active nature, would always and everywhere be urging the buoyant Goodness (Sattva) to action, if it were not restrained by the sluggish Darkness (Tamas)—by which restraint it operates only at times; thus Darkness (Tamas) becomes a restraining agency.

The method of their operation.

(101). Having thus laid down their functions, the author lays down the method of their operation—"*Mutually subdue and support, and produce one another, and consort together.*" "*Vritti*" (action) is to be construed with each member of the compound. Now, to explain, "*Mutually subduing*—" The Attributes are so constituted that when one is brought to play, by some external cause, it subdues the other; *e. g.*, Goodness attains to its peaceful state only after having subdued Foulness and Darkness. Similarly do Passion and Darkness, in their turn, attain to their respective terrible and stupid conditions after having subdued the other two.

"*Mutually supporting*"—[*Anyonyâsrâyavrittayah*].—Though this statement as not applicable here, in the sense of *the container and the contained*, yet by 'support' (*Âsraya*) here is meant something on which depends the action of another—as for instance, Goodness helps by its illuminative character, only when helped by Foulness and Darkness through their respective properties of activity and restraint. [Or else Goodness by itself, without the touch of Foulness, would remain inert, and never be moved to action.] In the same manner do Passion and Darkness help respectively by their activity and restraint only when supported by the functions of the other two. "*Producing each other.*" That is to say, one can produce (its effects) only when resting on the other two. By *production* here is meant *development* or *modification*, which is always of the same character as the parent Attribute which latter, therefore, are uncaused there being no possibility of anything differing in essence therefrom being the cause; nor are they transient since they are never resolved into an essentially different cause. "*Consorting together.*" That is to say they are mutual companions, not existing apart from one another. च has a collective force. In support of the above, we have the following: "all (attributes) are mutual consorts; all omnipresent; Goodness is the consort of Passion, Passion of Goodness, both of these again of Darkness, which latter again of both, Goodness and Passion. The first conjunction or separation of these has never been perceived."

(102). It has been said—"*Adapted, to illumination activity, and restraint.*" Now it is explained what those are that are adapted, and wherefore are they so?

KÂRIKÂ XIII.

The three Attributes named and their nature explained.

Goodness is considered to be buoyant and illuminating; Foulness is exciting and versatile (mobile); Darkness, sluggish and enveloping. Their action, like a lamp, is for a (single) purpose.

The properties of Goodness (Satwa).

(103). Goodness alone is considered, by the masters of Sânkhya philosophy, to be buoyant and illuminating. *Buoyancy*—as opposed to sluggishness—is the property to which the ascension of objects is due; it is to this property that the rising flame of fire is due. In some cases, this property also brings about lateral motion, as in the case of air. Thus, generally, *buoyancy* may be said to be that property in the cause, which greatly helps its efficiency to its particular effects; *sluggishness*, on the other hand, would only dull the efficiency of the cause. The illuminative character of Goodness has already been explained (Kârikâ XII).

Buoyancy.

Illuminativeness.

Necessity of the properties of Foulness (Rajas)—activity and excitingness.

(104). Goodness and Darkness, being by themselves inactive, stand in need of a force, exciting their causal operation; this force is supplied by Foulness, which excites them and rouses them from their natural passivity, and urges them on to the accomplishment of their respective effects. Hence, Foulness is said to be *exciting*. This exciting character of Foulness is next accounted for—"*(it is also) versatile.*" This also proves the existence of Foulness as a particular Attribute, being necessary for the sake of action.

Necessity of the properties of Darkness (Tamas)—sluggishness and envelopingness.

(105). Foulness, in accordance with its versatility, would keep the triad of Attributes in a continuous whirl of activity, but for its being restrained by the "sluggish and enveloping" Attribute of Darkness, which thus limits the scope of its actions. Thus, in order to be distinguished from the active Foulness, Darkness has been said to be the *restrainer*—"*Darkness is sluggish and enveloping.*" The particle *Eva* is to be construed—not only with "Darkness"—but with "Goodness" and "Foulness" also.

Objection—The Attributes of contradictory natures cannot co-operate.

(106). The enquirer objects: Instead of co-operating for a single purpose, the Attributes, being endued as they are with contradictory properties, would counteract each other, like opposed wrestlers, (and thus there would be no effect emanating from them). The author replies—"*Like a lamp, their action is for a single purpose.*" We have all observed how the wick and the oil,—each, by itself, opposed to the action of fire—co-operate, when in contact with fire, for the single purpose of giving light; and the various humours of the body—wind, bile, and phlegm—though possessed of contradictory properties, co-operate for the single purpose of sustaining the body. Precisely in the same manner, do the three Attributes, though,

Reply—they can, like wick and oil, in giving light.

possessed of mutually contradictory properties, co-operate towards a single end— the purpose (emancipation) of the Spirit. This will be further explained in Kârikâ XXXI.

Necessity of postulating the three Attributes, as causes of pleasure, pain and delusion respectively.

(107). To return to our original subject—Pleasure, pain and delusion, opposed to one another, lead us to three different causes connate with themselves respectively, (and as these causes we have postulated the three Attributes). These causes too must be multiform, since, by their very nature, they are mutually suppressive. As an example of the multiform character of these various causes of pleasure, pain and delusion, we may have the following: A single girl, young, beautiful, gentle and virtuous, is a source of delight to her husband, because with regard to him she is born with her essence consisting in pleasure. She pains her co-wives, because with regard to them, she is born with her essence consisting in pain. And, lastly, the same girl stupefies another man who is unable to get at her, because with regard to him, she has her essence in delusion. All the different forms—pleasure, &c., have been explained by this single instance of a woman. In the above case, that which is the cause of pleasure, is the *Attribute of Goodness* which is essentially made up of pleasure; the cause of pain is Foulness, consisting in pain; and, lastly, the cause of delusion is *Darkness*, consisting of delusion. The properties, pleasure, illuminativeness, and buoyancy (belonging to Goodness) cannot be similarly said to be mutually opposed, and thus incapable of co-existing in a single Attribute. As a matter of fact, we find them actually co-existing. Hence, pleasure, illuminativeness, and buoyancy, being mutually consistent, do not necessitate the assumption of different causes (for each of them severally) as do pleasure, pain, and delusion which are mutually opposed, (and as such unable to co-here in a single substratum). In the

Goodness the cause of pleasure; Foulness of pain, and Darkness of delusion.

The properties of each of the Attributes are not contradictory, and so they do not necessitate the assumption of different causes for each of them.

same manner, pain, versatility, and activity (properties of Foulness), as also delusion, sluggishness, and envelopingness (properties of Darkness), do not lead to the assumption of various causes. *Thus the triad of Attributes* is established.

Question—Indiscreetness, &c., of the Attributes, how proved?

(108). *Objection* :—Granted, all this. As regards earth, &c., we actually perceive the properties of indiscreetness, &c., as belonging to them. But the Attributes, Goodness, and the rest, can never come within the range of perceptible experience. And under such circumstances, how can we attribute to these latter, the properties of indiscreetness, objectivity, &c., (enumerated above)?

To this objection we reply—

KÂRIKÂ XIV.

Two reasons for the above given. Existence of nature proved.

Indiscreetness and the rest are proved from the existence of the three Attributes, and from the absence of these (the three Attributes) in the reverse (of indiscreetness, &c. *i. e.*, *Purusha*). And the existence of the Unmanifested (Nature) too is established on the ground of the properties of the effect (the Manifested) being consequent on those of the cause.

(109). By "*a vivéki*" in the Kârikâ is to be understood "*avivékitva*", as '*dvi*' and '*éka*'—in "*dvékayordvivachanaikavachané*" [*Siddhântakaumudi* I—iv—22]—denote '*dvitva*' and '*ékatva*' respectively; or else it would be (*) "*dvékéshu*" (and not "*dvékayoh*":). It being asked—How do you prove these, indiscreetness, &c.?—the reply is :—"*From the existence of the three Attributes.*" That is to say, we have found

---

* For if the compound were analysed into "*dvi*" and "*éka*," the sum would be three, and would thus require a plural ending, and not the dual,—which is explained by making "*dvi*" and "*éka*" stand for "*dvitva*" and *ékatva* making only two nouns, and thus having a dual ending.

First proof: *From the existence of the three Attributes.*

in common experience, with regard to the perceptible material existence, that, whatever consists of pleasure, &c., is qualified by indiscreetness, &c. The affirmative reasoning, being explicit enough, is not stated in the Kârikâ, which only mentions the negative reasoning :—"*From the absence of these in the reverse*"—that is to say, from the non-existence of the Attributes in the Spirit which is the reverse of indiscreetness, &c. Or again, we may have the *Manifested and the Unmanifested* (both together) as the subject (minor term) of the syllogism, and then we shall have the reasoning—"*From the existence of the three Attributes*"—as a purely negative inference* (*Avîta*), there being no other case (besides the minor term) where we could have the agreement of the reason (Middle term—existence of the Attributes).

Second proof: *From the absence of these in the reverse (Spirit).*

(110). An objection is again raised—We grant all this ; but the existence of the properties—indiscreetness, &c.,—cannot be proved before the object possessing these properties (the Unmanifested) has been proved to exist To this we reply—"*From the properties of the effect being due to the properties of the cause.*" The connection may be thus explained : All effects are seen to possess properties similar to those of their respective causes, as the cloth of the

Question—How is Nature proved to exist ?

Reply : *From the properties of the effect being due to those of the cause.*

---

* The syllogism has previously been explained as—"Whatever has pleasure, &c., is indiscreet, as the perceptible material substances :"—and here we hand the agreement (*Anwaya*) of the reason in the "perceptible substances" whose connotation is different from that of the subject of the syllogism, "*All things* having pleasure, &c." Now what our author proposes is that we might explain the reasoning thus : "All things besides the spirit (the Manifested and the Unmanifested) are indiscreet, since they possess the three Attributes, and whatever is not indiscreet does not possess the three attributes." Thus in the latter syllogism we have for the minor term *The Manifested and the Unmanifested* which comprehend all cases where the reason (the presence of the three attributes) could be found; for nothing besides the Manifested and the Unmanifested can be said to have the three Attributes.

threads. Similarly we must admit that pleasure, &c., being properties of Consciousness (Mahat), &c., must be the outcome of similar properties subsisting in their cause. [And this cause is no other than Nature.] And thus we have proved the existence of Nature, as possessed of the properties of pleasure, pain, and delusion.*

Why not accept the atomic theory—which discards the necessity of an Unmanifested Entity?

(111). "I grant all this", says the enquirer; "but the followers of Kanâda (the Vaiseshikas) and Gautama (the Nayâyikas) assert the production of the Manifested, Earth, and the rest from the binary compound downward—from homogeneous atoms, which too are manifested. The various properties in the effects owe their existence to similar properties in the primary atoms.† And thus finding the production of the Manifested from the Manifested, quite explicable, what is the use of postulating an Unmanifested, an imperceptible Entity (in the form of Nature)?"

---

* And consequently *Nature* too is proved to have indiscreetness, &c., in accordance with the proposition laid down before—"whatever has pleasure, &c., has indiscreetness, &c., also." The reasoning may be rendered clearer by reducing it to the form of two Aristotelian syllogisms :—

Properties of the effect (Intellect) are properties of the cause (Nature).
Pleasure, &c., are properties of the effect (Intellect).
∴ Pleasure, &c., are properties of the cause (Nature.)

And again :—

Whatever has pleasure, &c., has indiscreetness, &c.
Nature has pleasure, &c., (as first proved).
∴ Nature has indiscreetness, &c.

† It will, I think, not be out of place here, to indicate, in brief, the atomic theory of Kanâda and Gautama,—which may be thus summed up.—In the beginning there existed only atoms of various substances (Earth, Water, Fire and Air) besides, of course, Akâsa, &c., which are in themselves eternal. These various atoms were respectively endued with four different sets of properties, latterly perceived in their compounds. By some agency or other—mainly that of "Adrishta," the Unseen (Fate)—all homogeneous atoms combine, one with one, into couples and thus form binary compounds, which latter again combining in the same manner, but three at a time, give rise to tertiary compounds, and so on to the various objects of perception. These atoms are declared to be without extension in space, or else they could not be permanent. But, as far as I know, no Nayâyika has even yet tried to show how two things devoid of extension, can combine—a point which affords the strongest handle to S'ankarachârya in his refutation of the atomic theory.—See *S'âriraka-Bhâshya* on the *Brahma-Sutras* II—ii—12/17.

We reply—

KÂRIKÂ XV.

Reply—we must postulate an Unmanifested Reality—Reasons given.

From the finite nature of specific objects, from homogeneity, from evolution being due to active (causal) energy, from the separation of cause and effect, and from the undividedness (resolution) of the whole universe.

First proof of the existence of Prakriti—"*Since there is separation of cause and effect, and re-union of the whole Universe.*"

(112). Of specific objects, the primary cause is the Unmanifested (Nature). Because (1) "*There is separation of cause and effect, and resolution of the whole Universe.*" It has already been proved (in Kârikâ IX) that the effect subsists (in its unmanifested form) in the cause; as the limbs of the tortoise, coming out of its body, are perceived as separate from the body, which again they enter and thus disappear (from view). In the same manner, the various objects, jar, &c., are perceived as different from their causes, clay, &c., when they come out of these (*i. e.*, are produced from them when they have their existence, as the jar manifested out of the lump of clay, wherein they have all along inhered.) The same is the case with earth, &c., as effects of the primary elements, with these latter again as effects of Self-consciousness (Ahankâra); with this latter again as that of Consciousness and lastly, with this last again as the effect of the Unmanifested, which is the final cause. This separation, from the final cause (the Unmanifested), of the various effects—either mediately (as with earth, &c.,) or immediately (as with Consciousness)—related to it, is what is meant by the *separation of the cause and the effect.* In the same manner, at every dissolution, the various grades of effects—(1) Earth, &c., (2) The Primary Elements, (3) Self-consciousness and (4) Intellect—lose themselves in their respective immediate causes—(1) Primary Elements (2) Self-consciousness, (3) Intellect and (4) the Unmanifested Nature. Thus we see that it is only a certain form of the cause which becomes imperceptible (at dissolution) as far as a particular effect is concerned. Ascending in the same order as before, we find the various effects up to Will disappearing in their respective immediate causes—up to the Final Unmanifested—and thus rendering these latter imperceptible, —at least that form of the cause which concerns each of them severally. Of this unmanifested, however there is no further receptacle; and thus it becomes the receptacle—and hence an aggregate of the unmanifested states—of all the effects. This is what is meant by the *re-union* (in the final Unmanifested) *of the whole Universe.* In *Vaiswarupya,* the affix ष्यञ् has a reflexive sense.

Second proof: "*Because Evolution is due to Energy.*"

(113). "*Because Evolution is due to Energy.*"—It is a well-known fact that the Evolution of the effect is due to the active energy of the cause; for certainly, no effect can arise from an inefficient cause. This latent energy in the cause is no other than the existence therein of the effect in its unmanifested state; since, on the hypothesis of the effect being an entity, there can be no other form of causal energy. The difference of sand from sesamum—the material cause of oil—lies only in the fact that it is only in the latter that oil exists in its unmanifested condition.

Objection: These two reasons might rest with *Intellect.*

(114). *Objection*: Granted all this:—But the above two reasons that you have urged might very well rest with the Will—what is the use of assuming a further Unmanifested Reality? We reply: (3) "*From finiteness*"—*i. e.*, from the fact of the effects being, in their very nature finite. (In support of his ground, the author puts forth a syllogism). The specific objects in question, Will and the rest have an Unmanifested Entity for their cause (*i.e.*, they have a cause in which they exist in their unmanifested state), since, they are finite, as jar, &c. The finite objects, jar, &c., as commonly seen, have, for their cause, clay, &c., (in which inhere) the unmanifested (state of the effects); since we have already shown that the cause is nothing more than the unmanifested condition of the effect. And under these circumstances, the cause of Will must be the Unmanifested which must be the *final* cause, for there is no ground for postulating a further Unmanifested Reality.*

Reply—Third proof—"*From finiteness*" (of all manifested existence.)

(115). "*Because of homogeneity.*"—Homogeneity consists in the similarity of different objects. Intellect, and the rest—manifesting themselves as ascertainment, &c.—are seen to be similarly related to pleasure, pain and delusion. And whatever is invariably connected with a certain form must have, for its cause (wherein it inheres), something which has that form for its constituent element. Thus it is decided that of the specific objects, the Unmanifested (Nature) is the cause.†

Fourth proof—"*Because of homogeneity.*"

Having proved the existence of the Unmanifested, the author next states the method of its operation—

---

* Because the Unmanifested Nature (the cause of Will is not finite, as its effects, Consciousness and the rest are. And further, because, by so doing we would have to postulate causes *ad infinitum.*

† Thus we have in the present case: Will and the rest are invariably connected, with pleasure, pain and delusion; and, as such, must have, for their cause, Nature wherein they all lie unmanifested prior to their Evolution; and this Nature has, for its Constituent Elements, the three Attributes which respectively consist in pleasure, pain and delusion.

KÂRIKÂ XVI.

The Unmanifested is the cause; it operates through the three Attributes by blending and by modification, as water, on account of the difference arising from the receptacle of the Attributes, as they are variously distributed.

The method of Natur's operation.

(116). "*Operates, &c.*"—At the time of cosmic dissolution, the three Attributes continue to be of similar modifications. Modified condition forms a part of the nature of the Attributes; and as such they can never, for a moment, remain inert. Thus at the time of dissolution, the Attributes operate through their respective forms of Goodness, Foulness and Darkness*.

Through the Attributes.

(117). Another method of operation is next stated—"*By blending.*"—This "blending" of the Attributes, however, is not possible without the relation of subserviency among them, and this subserviency again is due to a diversity among the Attributes—which diversity again is not possible without destructibility (*i. e.*, unless the Attributes are so constituted that they suppress one another). Thus the second method of operation is through development into Will &c.†

By a blending of the Attributes.

(118). The enquirer objects—How can diverse methods of operation belong to an Attributes which have been declared to be of uniform nature? We reply—"*By modification—as water*"—we all know how the water falling from the clouds, though

Objection—How can an Attribute of uniform nature bring about diverse actions?

---

* This is the state of equilibrium of the Attributes, during which no evolution is possible.

† The various evolutions from Nature are due to the disturbance of equilibrium among the Attributes, which rouses the hitherto dormant, evolving energy of Nature, whence issue forth the various manifestations—Intellect and the rest.

naturally of itself, having one taste,* becomes sweet, bitter, sour, &c., according as it comes into contact with different modifications of earth—such as cocoanut, wood-apple, &c. In the same manner, owing to the blending and the mutual suppression of the Attributes, the Attributes occupying a subordinate position base themselves on the prominent one, and thus give rise to diverse forms of cosmic manifestations. Hence it is laid down—"*On account of the difference arising from the receptacle of the various Attributes.*"

Reply: "*By modification as water.*"

(**119**). Now the existence of the Spirit (Purusha) is laid down, in opposition to those self-contented (Materialists) who accept as spirit either Nature or Intellect, or Self-consciousness, or the sense-organs, or (lastly) the elements.

KÂRIKÂ XVII.

Since all composite (or compound) objects are for another's use; since the reverse of (that which possesses) the three Attributes with other properties (must exist); since there must be super-intendence; since there must be one to enjoy (experience or feel); and since there is a tendency towards final beatitude (abstraction of the Spirit from material existence);—therefore Spirit exists.

Reason for the existence of spirit.

Spirit exists, apart from Primordial Matter (Nature):—

The spirit exists: because all compound objects are for another.

(**120**). "*Because all compound objects* (objects made up of integral component parts) *are for another's use.*"—This reason, when reduced to the syllogistic form, would stand thus—Nature, Intellect and the rest exist for another's use, because they are compounds, as chair, bed, &c., and these latter are all compound, inasmuch as they are made up of pleasure, pain and delusion.*

---

* 'Sweet'—according the Nayayikas.

Objection: The above reasoning would only lead to another set of compounds not to an Elementary Spirit.

Reply—*Since the reverse of that which possesses the three Attributes must exist.*

The view of the objector would lead to compounds *ad infinitum.*

(**121**). But, says the objector, the compound objects chair, &c., are seen to exist for other objects which too are compound, such as men's bodies and not for the sake of Spirit as apart from Matter (the body). And as such Nature, &c., being compounds, should only lead to the inference of another set of compound substances (for whose use they exist) and not to that of an Elementary Non-compound Spirit (an "End-in-itself.") We reply—"*Since the reverse of that which possesses the three Attributes and other properties must exist.*"—That is to say, if from the fact of Nature, &c., being for another's use, we were to infer only another compound substance, then in that case we would have to assume such compounds *ad infinitum*; for even this latter compound must lead to another for whose use it will exist and this again to another, and so on *ad infinitum.* And when we can escape this *regressus ad infinitum* by postulating a reasonable resting ground, it is certainly, not proper to multiply unnecessary assumptions (in the shape of compounds *ad infinitum*). Nor can it be urged that multiplication of assumptions becomes excusable when supported by proofs; for in the above inference the application of the instance ought to be extended only so far as "existing for another's use" is concerned; it can be extended no further. And we have explained in the *Nyâyavârtika-*

---

* This sounds rather absurd. But we must not forget that the whole set of material objects are mere emanations from Nature, whose constituent elements are the three Attributes, which latter consist in pleasure, pain and delusion, respectively.

*tâtparyatika** that if the complete identification of every phase of the cited instance were to be looked for in the subject in question, then there could be no reasoning by inference.† Thus then, in order to escape the *regressus ad infinitum*, if we accept the non-compound nature of Spirit, we find ourselves constrained to attribute to it the properties of "being without the three Attributes," "discreetness," "non-objectivity" (subjectivity), "uncommonality" (*i. e.*, specific character), "intelligence" and "unprolificness" (inability to produce). For, these properties are invariably accompanied by that of *compoundness*, which latter being absent in spirit, must lead to the inference of the absence of the three Attributes, &c., as when a certain individual is not a Brahmana, he can never be a Katha (a special class of Brahmans). Hence the author—when he laid down that "the reverse of that which possesses the three Attributes, &c., must exist"—implied that this something which would be "the reverse, &c." must be an independent Elementary Entity—an "End-in-itself." And this is Spirit.

(122). For the following reason also there must be a Spirit apart from Matter: *Because there must be superintendence.*" That is to say, because the objects constituted by the three

Because there must be superintendence.

---

* This is a commentary on the Nyâyavartika (a gloss on the Nyayasutras of Gautama) of Udyotakara by Vâchaspati Misra. This work with the Parisuddhi of Udayanacharya is generally counted as closing the epoch of ancient Nyâya,—latterly supplanted by the modern system, introduced and most extensively expounded by Gangesa Upâdhyaya, in his Tattwa-Chintâmani.

† Because there can scarcely be found any two occurrences in nature, which could be quite identical. Even in the stock example of the Naiyayikas —"Fiery, because smoking, as the culinary hearth"—we have a dissimilarity between the subject-matter of the syllogism and the instance cited. Thus, in the culinary hearth the fire is for cooking food, and proceeding from a house made by men, &c., &c., whereas such is not the case with the fire in the mountain.

Attributes are such as necessitate the existence of a superintendent. For, everything consisting in pleasure, pain and delusion, is seen to be superintended over by something else —*e. g.* the chariot by the charioteer ; and Intellect and the rest have been proved to consist in pleasure, pain and delusion ; therefore, they must have a supervisor,—and this supervisor must be beyond* the three Attributes and independent, an " End-in-itself "—and this is Spirit.

Because there must be one to feel.

(123). Again the Spirit exists "*because there must be one to experience* (or feel)"—That is to say, every one of us has an idea of pleasure and pain as something to be felt—as agreeable or the reverse ; and as such there must be some substance, beyond the feelings themselves, to which they (feelings) can be agreeable or otherwise. Feelings cannot be pleasurable to the Intellect (Buddhi), &c., for that would imply self-contradictory actions, inasmuch as the Intellect and the rest are integrally composed of pleasure, pain and delusion.† Thus, then, something else, independent of pleasure, &c., must be the agent who feels—and this is Spirit.

A different interpretation of the above reason.

(124). Others, however, interpret the above reasoning of the Kârikâ thus : *Bhogya* (enjoyable) means *visible*; and the visibility of *Buddhi* and the rest not being possible without an observer, there must be one outside of, and beyond, Intellect, &c.,—and this is Spirit. The visibility of

---

* Otherwise the supervisor also will stand in need of another, for the presence of the Attributes in the former will necessarily lead to that of pleasure, &c., which again will necessitate its superintendence by something beyond itself. And so we shall be landed in a *regressus ad infinitum.*

† That is to say—Intellect, as made up of pleasure, pain and dulness, cannot be properly said to *feel* pleasure, &c., for that would imply the feeling of *pleasure* by pleasure ;—or worse still—by pain ; and *vice versâ,* which is absurd.

Intellect and the rest can be inferred from the fact of their being made up of pleasure, &c., as earth, &c.

Because of the tendency of writers and sages towards beatitude.

(125). Lastly, Spirit exists—"*because there is a tendency towards action for final beatitude.*"—The final beatitude, treated of in all the systems of philosophy, and mentioned by the great sages of divine insight—as the absolute and final alleviation of the three kinds of pain—can never apply to Intellect, &c. ; for, these have by their very nature, pain as one of their integral components, from which, therefore, they can never be absolved ; since a substance cannot be absolved of something forming its constituting element. Thus then, there must be something independent of pleasure, &c., wherefrom pain could be expunged. Consequently, as the various systems of philosophy have all along aimed at beatitude, therefore, there exists something beyond (pleasure, &c., and hence) Intellect and the rest—and this is Spirit.

Having thus proved the existence of Spirit, the author next raises the question—Is this spirit one (*) (manifesting itself) in all bodies, or many, being different in different bodies ? And in reply, he lays down the theory of the plurality of

KÂRIKÂ XVIII.

Plurality of Spirits —Reasons.

From allotment of birth, death, and the organs ; (2) from the non-simultaneity of actions (with different individuals) ; and (3) from the different modifications of the Attributes—the plurality of Spirits is established.

"*The plurality of Spirits is established*"—How ?

As the Vedantin asserts.

"*From allotment of birth, death and the organs.*"

(127). "*From allotment of birth, death and the organs.*"—*Birth* of the Spirit consists in its relation with the body the sense-organs, Self-consciousness, Will and Feeling* (*vedana*)—all these latter forming into an aggregate of a particular character. This is what is meant by *birth*—which does *not* mean *modification*; since the Spirit is essentially unmodifiable (unchangeable). And *death* too consists in the departure from the body, of the Spirit, which cannot be destroyed, since it is eternal. The "*organs*" are thirteen, beginning with the Will. The (diversified) "*allotment*" of these—births, &c.—is not explicable on the hypothesis of the unity of Spirit. For, if the Spirit were one (in all bodies), the birth, death, blindness or madness of one individual would lead to exactly the same effects in others. The several allotment, however, becomes quite consistent with the theory of the plurality of Spirits. Nor can the Monist explain the above difference by attributing it to the Spirit, as conditioned by contact with different bodies, &c. For in that case he would land himself on another absurdity—that of attributing birth or death in accordance with the different parts of the body!—which can never be. For a woman is not said to be born or dead, by the mere development or derangement of certain portions of her body.

"*Since activity is not simultaneous.*"

(128). For the following reason also, the Spirit is different with different individuals: "*Since activity is not simultaneous.*" Action, in the form of endeavour, is a function of the internal organs; still it is here attributed to the Spirit. If the Spirit were one, the activity of one man would lead to similar activity in all other men; and thus the motion of one would lead to that of all others—a palpable absurdity, which is explained away quite reasonably, on the hypothesis of *plurality*.

---

* "*Vedana*" might be taken severally with "body," &c. In that case the passage would be translated thus—"bodily, sensuous, mental, egoistic and intellectual cognitions"; but the translation given above is preferable: for certainly, there can be no cognition through body, &c., taken singly. No cognition is possible in the body alone, without the aid of (the sense-organs) mind, &c., and so on with the rest.

Because the modifications of the Attributes are different.

(129). Again, the Spirits are many—"*because the modifications of the Attributes are different*"—Some persons abounding in the attribute of Goodness, represent aggregates of that attribute—*e. g.* the gods and saints. Others abound in Foulness—such are men. The rest abound in Darkness—and these are the beasts. This diversity in the distribution of Attributes could not be explained if the Spirit were one. The hypothesis of plurality, however, makes it quite explicable.

(130). Having thus established the plurality of Spirits the author now states their properties—a knowledge of which is conducive to discriminative knowledge (wisdom):—

KÂRIKÂ XIX.

The properties of the soul.

And from that contrast (before set forth) it follows that the Spirit is witness, and has final emancipation, neutrality, and is perceiving and inactive.

"*And*" connects the following properties of the Spirit with its plurality.

Why *that* contrast?

(131). If it were said—"And from *this* contrast," then it would refer to *the various distribution of the three Attributes*, of the last Kârikâ. In order to avoid this, it is said—"and from *that*, &c." A subject, immediately preceding, is referred to by the pronoun *this*; whereas one not so immediate is denoted by *that;* hence the *that* here refers to Kârikâ XI.

(132). Thus, then, the *contrast* of "having the three Attributes, &c.," connotes the Spirit's property of being without the three Attributes, and being discriminative, non-objective, singular, intelligent and non-productive. Now, the properties of being a *witness* and *perceptive* are necessary accompaniments of intelligence and non-objectivity. Since an intelligent being alone can be a spectator, and one can be a witness only when the objects have been shown to him; as in daily life we find the two parties of a dispute showing and explaining their various objects and reasons to the witness; similarly does the Prakriti exhibit its creations before the Spirit, which latter, therefore, becomes the *witness*. And again no object can be shown to one, himself an object and non-intelligent; and since the Spirit is both intelligent and non-objective, it becomes the *witness*. For the same reasons, the Spirit is *perceiving*.

The necessity of so many properties. Their inter-dependence.

(133). Further, the absence of the three Attributes leads to *final emancipation*—by which is meant the final and absolute removal of pain; and this property, as belonging to the spirit, is a necessary deduction from the fact of the soul being naturally without the three Attributes, and hence without pleasure, pain or dulness.

(134). From the absence of Attributes, again, follows *neutrality*; since this latter property is such as cannot belong either to the happy and satisfied, or to the sad and grumbling. It is only one who is devoid of both pleasure and pain, who can be called *neutral*—also called *Udâsina* (indifferent). Lastly, the property of *inactivity* is a necessary outcome of the properties of non-productiveness and discriminativeness (wisdom). The inactivity of the Spirit is inferred from its wisdom and non-productive character.

(135). *Objection*:—We grant all this: but in our daily life we first decide our duty and then we think in the following strain—'I, who am an intelligent being, wish to act.' Thus, then, we find intelligence and activity co-

Objection—Intelligence and activity always found co-existent.

existent. And this goes against the Sankhya tenets which make intelligence devoid of activity and *vice versâ*.

We reply :—

KÂRIKÂ XX.

Reply:—The apparent activity of the soul due to union with Buddhi, and the apparent intelligence of the latter due to union with Purusha.

Thus, from this union the unintelligent *Linga* (Buddhi, &c.,) appears as intelligent ; and from the activity of the Attributes, the indifferent Spirit appears as an (active) agent.

(136). Since intelligence and activity have been proved to be differently located, therefore, the feeling referred to by the objector must be a mistake. The word *Linga* includes everything from the *Mahat* down to the primary elements—to be described later on. The cause of the mistake is said to be the union or proximity of the Spirit with the *Linga*, (Buddhi and the rest).

The rest is clear enough.

Objection—What is the need of the union?

(137). *Objection* :—You say that the feeling is due to *union, &c.* But no union is possible without some need which, again, is not possible without the relation of the helper and the helped. How is this possible in accordance with your tenets, with regard to the union of the Spirit with the *Linga*?

In reply, the author lays down the grounds of need—

KÂRIKÂ XXI.

Reply—The need is that of final Emancipation.

For the Spirit's contemplation of Prakriti, and its final Emancipation, the union of both takes place, like that of the halt and the blind ; and from this union proceeds creation.

(138). In "*Pradhânasya*," the genitive affix has the objective force, the meaning being—"for the contemplation by Spirit of Nature."—thus implying the fact of Nature being an object—something to be enjoyed. But this enjoyability is not possible without an enjoyer, whose existence thus becomes necessary, for that of Nature.

The need explained.

(139). The author next lays down the ground of the Spirit's need—"*For the Emancipation of the Spirit*"—The Spirit, while in connection with the enjoyable Nature, believes the three kind of pains—the constituents of Nature—to be his own; and from this self-imposed bond he seeks liberation—which can result only from wisdom discriminating between the Spirit and the three Attributes—which wisdom thus becomes impossible without the knowledge; and hence the existence, of Nature. Thus then we find the Spirit standing in need of Nature, for his emancipation. Since the relation (of Spirit with Nature) is eternal, therefore, it is quite proper that the Spirit should be related to Nature for emancipation, though primarily, the relation was for enjoyment only.

(140). Granted all this relation—But whence the creation of Buddhi, &c.?

The necessity of the creation of Buddhi, &c.

We reply—"*From this union proceeds creation.*" The relation (of Spirit with Nature) cannot by itself suffice either for enjoyment or emancipation, if there were no Buddhi and the rest; under the circumstances the *union* itself brings about the creation, for the sake—primarily—of enjoyment, and finally, of emancipation.

The process of creation is now described—

KÂRIKÂ XXII.

The process of Evolution from Prakriti downwards.

From Prakriti issues Mahat (or Buddhi); from this Mahat again issues Self-consciousness (Ahankâra), from which proceeds the set of sixteen; from five of these sixteen, proceed the five gross elements.

(141). *From Prakriti, &c.*—*Prakriti* is a name of the Unmanifested Principle; *Mahat* and *Ahankâra* will be described later on, as also the set of sixteen, made up of the eleven sense-organs and the five primary elements. Out of these sixteen, from the five primary elements, proceed respectively the five gross ones—Akâsa, Earth, &c.

The process of the production of the elements.

(142). Thus, from the primary element of sound proceeds Akâsa, having sound as its characteristic property; similarly from the mixture of the primary elements of touch and sound, proceeds Air, with sound and touch as its characteristic properties; again, from the mixture of the primary elements of sound, touch and colour, proceeds Light, with sound, touch and colour for its characteristic properties; and from the mixture of the primary elements, of sound, touch, colour and taste, proceeds Water, with sound, touch, colour, and taste as its characteristic properties; and lastly, from the mixture of the primary element of smell with that of the last four, proceeds Earth, with all the five for its characteristic properties.

(143). The Unmanifested Principle has been defined in general terms in Kârikâ X, and specifically in Kârikâ XIII; the Manifested also has been generally defined in Kârikâ X; now the author defines a particular Manifested Principle—the *Buddhi*—

KÂRIKÂ XXIII.

Buddhi defined. Its properties stated.

Buddhi is the determining Principle (Will)*; Virtue, Wisdom, Dispassion and Power constitute its form (when affected by Goodness), and the reverse of these when affected by Darkness.

---

* Though there is some difference of opinion on this point, yet I am inclined to think that *Adhyavasaya* means 'determining,' and of all the faculties *will* appears to be the only determining principle in Man. Henceforth *Buddhi* will be translated as *Will*, and the reader is requested to mark the same change in the foregoing pages.

(144). "*Buddhi is determination*"—Since there is no difference between the action and the active agent (effect and cause). Everyone, when he comes across something to be done, thinks that he is deputed to the work and, finally, determines that it is his duty, and thus acts towards its accomplishment. This determination of the duty is the charateristic property of *Buddhi*—which appears as if endued with intelligence by contact with the intelligence of the Spirit. Buddhi, again, is non-different from determination, which thus forms its definition, inasmuch as it serves to distinguish it from similar as well as dissimilar substances.

The definition of Buddhi explained.

(145). Having thus defined *Buddhi*, the author next states its properties, in order to help the attainment of true wisdom—" *Virtue,*" &c., Virtue leads to (worldly) prosperity, as well as to Super-physical bliss,—that brought about by the performance of sacrifices &c. leading to the former, and that due to the eightfold practice of *Yoga* leading to the latter. Wisdom consists in the knowledge of the difference between the Attributes (as constituting Nature) and the Spirit. Dispassion is absence of passion.

The properties of Buddhi-Virtue, Wisdom, Dispassion and Power, and the reverse of these.

(146). *This Dispassion is of four kinds—*Yatamâna-Sanjnâ Vyatireka-Sanjnâ, Ekendriyâ-Sanjnâ and Vasikâra-Sanjnâ.* The passion—naturally impure—residing in the mind, lead the different senses-organs to action. The effort to put a stop to this action of the senses is named *Yatamâna-Sanjnâ* (literally, *effort*). When this process of resistance is once begun, some passions will have been suppressed before others ; then the discrimination of these from those still operating is called *Vyatireka-Sanjnâ.* When the senses have been disabled, then the passions that have been suppressed reside in the mind in

The four kinds of dispassion.

Cf. Bhashya on Yogasutra 1—15

the form of mere anxiety—and this is known as *Ekendriyá-Sanjná.* The suppression of even this anxiety towards all perceptible objects,—the ordinary ones as well as those mentioned in the Veda,—is called *Vasikara-Sanjná*—and is superior to the first three; this has been thus described by the revered Patanjali: "The dispassion named *Vasikara-Sanjnyá* belongs to one who has no desire for either visible or Vedic objects." [Yoga-Sûtra I, 15].

The eight kinds of power.

(147). This is Dispassion, a property of Buddhi. Power also is a property of Buddhi; an it is to this that the perfections Attenuation and the rest (*Animâ,* &c.) are due.* Of these (1) *Animâ* (*Lit* Atomic character) the is the property by which one can enter the densest substances, such as stones. (2) *Laghimâ* (Buoyancy) is that to which is due the ability to traverse solar regions by means of the sun's rays. (3) *Garimâ* (Gravity) leads to heaviness; and (4) *Mahimâ* (Grandeur) causes supremacy. To (5) *Approach* is due the ability to touch the moon with the fingers. (6) *Fulfilment of desires* is such as can enable one to dip into the earth as in water. (7) *Vasitwa* leads to the subordination of all objects to the devotee. Supremacy brings about mastery over all objects. (8) *Infallibility of purpose* is such that all objects follow the course dictated by the will of the devotee. The decisions of ordinary mortals follow the course of events, whereas those of a trained devotee precede them and dictate their course.

(148). These four are the properties of Buddhi, partaking of the attribute of Goodness. Those partaking of the attribute of Darkness are the reverse of these—*viz.*: Sin Ignorance, Passion and Weakness or Fallibility.

---

* There is some confusion as to the number of these perfections. As enumerated here, they appear *nine*; but they ought to be *eight* only: hence I have taken *Vasitwa* and *Isitwa* as one.

The author next defines Egoism or Self-consciousness (Ahankâra).

Kârikâ XXIV.

The principle of Ahankâra defined. Its effects.

Egoism is self-consciousness; thence proceeds a two-fold creation,—the set of eleven and the five primary elements.

(149). "*Egoism is self-consciousness*"—and this Self-consciousness is perceptible in such ideas as—"The object I have observed and known," "none but myself has power over this and that," "I exist," &c. All this is the characteristic action of the principle of Egoism, on which the Buddhi depends for its determinative function in such decisions as "this is to be done by *me*."

(150). The different products of this effect are next stated —"*Thence proceeds a two-fold creation.*" The forms of these creations are stated—"*The set of eleven and the five primary elements*"—only these two creations proceed from the principle of Egoism. The '*eva*' excludes all other possible suppositions.

Objection:—How can two diverse kinds of creation proceed from a uniform Egoism?

Objection:—We grant all this: But the principle of Egoism being of one uniform nature, how can two different kinds of creation—inanimate (the elements) and enlightening (the senses)—proceed therefrom?

We reply—

Kârikâ XXV.

Reply—The difference due to the diversity of the operating Attributes.

The set of eleven proceeds from the modified principle of Egoism, and partakes of the attribute of Goodness. The primary elements are due to the Attribute of Darkness; from Foulness proceed both.

(151). The eleven senses, being light and enlightening, are said to partake of Goodness, and as such proceed from modified Egoism. From Egoism as affected, on the other hand, by Darkness, proceed the set of the primary elements. How so? Because these elements partake of the Attribute of Darkness. That is to say—Though the principle of Egoism is one and uniform, yet from the operation or suppression of various Attributes, it produces creations of diverse characters.

Objection:—The purposelessness of Passions.

(152). This is objected to:—When all the necessary effects are brought about by the action of the attributes of Goodness and Darkness only, have done with the purposeless attribute of Foulness.

We reply—

Reply—Passion necesary for urging the other Attributes to action.

"*From Foulness proceed both*"—*i. e.*, the set of eleven as well as the primary elements. Though there is nothing to be done exclusively by Foulness, yet it is a necessary factor, since the attributes of Goodness and Darkness are both, by their very nature, inert; and as such could not do their own work unless urged to action by the active and mobile *Rajas.* Thus then, the efficacy of the attribute of Foulness lies in its character of supplying the motive force to the inert attributes of Goodness and Darkness. And thus we see that it is not altogether purposeless.

In order to describe the set of eleven—the effects of Goodness—the author first describes the ten external sense-organs.

KÂRIKÂ XXVI.

The ten External Organs.

The intellectual organs are, the Eye, the Ear, the Nose, the Tongue and the Skin; those of action are, speech, hand, feet, the excretory organs, and the organ of generation.

Sense defined.

(153). *Sense* is defined as the immediate effect of the principle of Egoism, as affected by the attribute of Goodness. These are two-fold—intellectual, and those of action. Both these are called

Indriyas (senses) because they are characteristics of the Spirit (*Indra*). The senses are named: "*The eye, &c.*"—Of these the eye is the sense for perceiving colour, the ear for perceiving sound, the nose for perceiving smell, the tongue for perceiving taste, and the skin for experiencing touch. These are the intellectual sense-organs. The action of the organs of speech and the rest will be spoken of later on (Kârikâ XXVII.)

Named. Functions.

The eleventh sense-organs is next described—

KÂRIKÂ XXVII.

Of these (sense-organs) Mind (*Manas*) partakes of the nature of both (intellectual as well as those of action): it is the reflecting (or thinking) principle, and is called a sense-organ since it has cognate properties. Its multifariousness, as well as its external forms, are due to the various specific modifications of the Attributes.

The eleventh sense—*Mind* defined.

(154). "*Partakes, &c.*"—Among the eleven organs, Mind partakes of the nature of both—*i. e.*, it is an intellectual organ of sensation, as well as one of action, since the eye and speech, &c., operate on their respective objects only when influenced by the principle of *Manas*.

The double nature of mind.

(155). The author next gives the specific definition of *Manas*—"*It is the reflecting principle*"—That is to say, *Mind* is defined by reflection (or thought). It is the principle which supplies forms and qualifications to the abstract cognition of a certain object, which invariably precedes the concrete and well-defined knowledge thereof. As is laid down by an ancient writer—"At first, one observes a certain object without qualifications, and latterly intelligent people think of the object as belonging to a certain

Mind defined.

The reflecting character of Mind explained.

class and having certain properties." It is a well-known fact that on first seeing an object, the first cognition that one has of it, resembles to a great degree the cognition of a child—indefinite and unqualified. Soon after this one learns to connect the object so observed, with its genus, property, &c. This latter cognition is said to be perception; which is a function characteristic of *Manas* (Mind), and as such serves to distinguish it from similar and dissimilar objects, and thus serves as its definition.

Objection:—Why make *Mind* a sense when it has distinct function of its own?

(156). *Objection:*—Granted all this: But we have seen that Egosim and Buddhi, having distinct functions of their own are not classed among sense-organs; in the same manner, we shall not class *Manas* among them either.

Reply—It is a sense inasmuch as it is an immediate effect of the principle of Egoism, as affected by Goodness—which is the definition of a *sense.*

The author replies—"*It is a sense-organ*"—Why? "*Because of its having cognate properties.*" This property mainly is the fact of its being the immediate effect of Egoism as affected by Goodness, and not that of being a characteristic of the Spirit; for this latter property belongs to Egoism also; and as such this latter would also have to be classed among sense-organs. Thus then "being the characteristic of the Spirit is only an explanation of the derivation of the term *Indriya*; it cannot be said to form its denotation.

Whence the multifarious effects from Egoism.

(157). It is asked—Whence such multifarious effects from the single principle of Egoism as affected by Goodness? We reply—"*It is due to the specific modifications of the Attributes*"—The difference in the effects is due to the diversity of auxiliaries in the form of the operative principles of sound, &c.

(158). Destiny (*adrishta*) is also a modification of the Attributes. We have the qualifying term "External" as presenting a comprehensible example, the sense of the sentence being—As the external forms are the effects of the modifications of the Attributes, so are also the internal and imperceptible ones.

(159). Having thus described the forms of the eleven sense-organs, the particular functions of the first ten are next stated.—

KÂRIKÂ XXVIII.

The functions of the external organs.

The function of the five senses, in respect to colour, &c., is mere observation or feeling; speech, handling, walking, excretion and gratification are (the functions of) the other five.

Observation:—the function of the five intellectual senses.

Speech, handling, walking, excretions pertain to the senses of action.

By "*observation*" here is meant the primary abstract perception (*Nirvikalpa*) through the intellectual senses. "*Speech &c., are of the other five,*" *i. e.*, of the organs of action. The vocal organ is located in the throat, the palate, &c., whose function is speech. The functions of the cognitive (intellectual organs) are clear enough.*

The functions of the three internal organs are next stated.

KÂRIKÂ XXIX.

Function of the internal organs.

Of the three (the internal organs) the functions are constituted by their respective characteristics; these are peculiar to each.

---

* That is to say they are denoted by their very names or by their definitions *e. g.* the ear is defined as the sense for perceiving (or comprehending) sound—and thus the function of the ear is perception of sound, and so with the others.

The function common to the organs consists in the five vital airs—Prâna and the rest.

(160). "*The functions of the three are constituted by their respective characteristics.*" That is to say, the property which serves as the distinguishing feature of each of the internal organs, also denotes their respective functions; thus, determination of *Buddhi*, self-consciousness of *Ahankâra* and reflection of *Manas*.

Reflection of Manas. *Self-consciousness* of Ahankâra and *determination* of Buddhi.

(161). The double character of the functions based on the fact of their being specific or common is next stated—"*These are peculiar,*" *&c.* "*The five vital airs*, constitute *the common function.*" The function of the three internal organs is the substance (of life, and hence) of the five vital airs; since the latter exist when the former do and cease to exist when these are absent. Of these the air called *Prâna* (Breath or Life) resides in the heart, the navel and the toes; that called *Apâna* resides at the back, &c., *Samâna* in the heart, the navel and the joints; *Udâna* in the throat, heart, &c.; and lastly, *Vyâna* resides in the skin. These are the five airs.

The five vital airs, the common function of the three internal organs.

The author now states the order of the functions of these fourfold organs (the external organs and the three internal organs).

KÂRIKÂ XXX.

With regard to visible objects, the functions of the four are said to be instantaneous, as well as gradual; with regard to invisible objects, the functions of the three

The instantaneous and the gradual character of these functions.

(internal organs) are preceded by that (*i. e.* the cognition of some visible object.)

Instantaneous with regard to visible objects.

(162). "*Instantaneous*"—"*with regard to visible objects,*" *e. g.*, when one sees in the dark by means of a flash of lightning, a tiger facing him, his *observation*, *reflection* and *determination* are instantaneous and accordingly he runs away from the place at once.

Gradual with regard to visible objects.

(163). "*Gradual,*" *e. g.*, in dim light, a person has at first only a faint *cognition* of a certain object; then he *looks at it* more steadily and *ascertains* that it is a thief with his bow and arrow levelled at him; then the consciousness follows "the thief is advancing against me"; and he finally decides to run away from the place.

With regard to invisible objects, the operation of the internal organs independent of the external organs.

The functions of internal organs preceded by those of the external ones.

(164). With regard to invisible objects, on the other hand, the internal organs operate without the aid of the external organs—"*The function of the three is preceded by that,*" *i. e.*, the instantaneous as well as the gradual functions of the three internal organs are preceded by some perception of a visible object; since Inference, Testimony and the other methods of proof operate only when they have for their back ground some sort of external perception.

Objection: Functions permanent or otherwise?

(165). *Objection*: Granted all this: But the functions either of the four or of the three (organs) cannot depend on themselves alone; for in that case (these organs) must be either permanent or transient; if permanent, then their funcions also would be permanent; if transient, then the various functions would combine most absurdly, there being no restrictive agency.

KÂRIKÂ XXXI.

Reply—Functions of the organs due to mutual impulse. Soul proposes the incentive.

We reply:—They* (the organs) operate towards the performation of their respective functions, due to mutual impulse. The purpose of the Spirit supplies the motive; by nothing (else) is an organ caused to act.

The subject of the first sentence is "organs."

(166). A number of persons wielding different weapons, unite for suppressing a common enemy, the one holding a lance uses that alone, and so on, each using his own particular weapon. In the same manner one organ operates towards the fulfilment of another's purpose, which tends to help its own. And since this movement towards action is the cause (and hence the regulating motive power) of the action of the organs, there cannot arise any absurd collision of the functions.

Objection—How can the non-intelligent organs understand each other's motive?

(167). Another objection—The lancers, &c., being sentient beings, can comprehend each other's motives and can act towards the fulfilment thereof. The organs on the contrary, are all in-sentient, and as such can never act in the same way as the lancers, &c., do (and hence your analogy does not apply to the case in question). Consequently the in-sentient organs must have an animate and intelligent supervisor over them, who is to understand their end and urge them to action accordingly.

Reply—Soul's purpose urging them to action.

We reply:—"*The Spirit's purpose is the motive, by nothing (else) can the organs be brought to act.*" Since the purpose of the Spirit is to urge the organs to action, what is the need of postulating a supervisor *ab extra?* This point will be further elucidated in Kârikâ LVII.

---

* Davies restricts this to the internal organs; but there is no reason why the Kârikâ should not apply to organs in general—as the Kaumudi takes it.

(168). It has been declared that "*by nothing is an organ brought to act.*" The author next states the division of these organs:—

KÂRIKÂ XXXII.

The organs devided—their functions—*seizing*, *retaining* and *manifesting*.

Organs are of thirteen kinds; they have variously the functions of seizing, retaining and manifesting. The objects of these are tenfold, that which is to be seized, retained or manifested.

The thirteen organs—the ten external organs, *Manas*, *Ahankâra* and *Buddhi*.

Seizing—the function of the senses of action.

Retention—the function of *Buddhi*, *Ahankâra* and *Manas*.

Manifestation—of the intellectual organs.

(169). The thirteen organs consist of the eleven sense-organs, *Ahankâra* and *Buddhi*. An organ is a particular kind of agent, and no agency is possible without a function; hence the author next states the various functions. "*They have the functions, &c.*" The senses of action have the function of *seizing*; that is to say, they extend their action to their respective objects. *Buddhi*, *Ahankâra* and *Manas retain* impressions by their respective functions—the life-breath, &c. (mentioned before); and lastly, the intellectual (perceptive) organs *manifest* their respective objects.

The objects of these functions, tenfold.

(170). Since every action must have an object, the objects of the above-mentioned functions are next stated—"*That which is to be seized,*" *&c.* The objects to be acted upon by the thirteen organs are those that are to be seized, retained and manifested. By *seizure* here is meant pervasion (or extension). The five senses of action extend over speech and the rest; and each of these being both human and superhuman these objects become tenfold. Similarly the object to be retained by the three internal organs is the body, which is fivefold being an aggregate of the five great elements, of sound, touch, colour, taste and odour. Each of these five being both human and superhuman, these objects also become tenfold. Similarly the objects of the five intellectual senses are five—sound, touch, colour, taste and odour; and each of these being both human and superhuman, the objects also become tenfold.

(171). The sub-divisions of the thirteen organs are next stated:—

Kârikâ XXXIII.

The organs numbered and the difference between the external and internal in point of time noted.

Internal organs are three; and the external ten, making objects known to the former three. The external organs act at time present; and the internal at the three divisions of time.

(172). The internal organs are three: *Manas*, *Ahankâra* and *Buddhi*, called *internal* because located *inside* the body.

(173). The external organs are ten: the ten sense-organs. These latter exhibit objects to the three internal organs, *i. e.*, they supply the means for *reflection*, *consciousness* and *determination* of objects—the intellectual senses functioning by means of observation, and the senses of action by means of their respective functions.

The external senses acting at time present; the internal with reference to all three divisions of time.

(174). The author next states a further point of difference between organs internal and external—"*The external organs act at time present.*" By "present" is meant here the time closely preceding and following the immediate present; thus then, speech* also belongs to the present. "*The internal organs at the three divisions of time.*" *e. g.*, the idea that "there has been rain," since the river has risen—(for the past); "there is fire in the mountain, since there is smoke"—(for the present); and lastly, "we shall have rain, since we see ants carrying their eggs"—(for the future).

---

* The special qualification is necessary for the case of speech, because no two letters can be pronounced at the same moment, and, as such, no word could be uttered at the time *present* if by this word were meant the present *moment* only. This absurdity, however, is avoided by counting a few moments before and after the present moment as included in it.

Time—not a distinct principle according to the Sânkhyas.

(175). Time, according to the Vaisêshikas, being one, cannot allow such divisions as past, present and future. Hence we must have for the various units, the various conditions or specifications to which we give the names, past, present and future. So the Sânkhyas do not admit of a distinct principle in the shape of Time.

(176). The author next considers the objects of the external senses operating at time present—

KÂRIKÂ XXXIV.

The intellectual senses touching specific as well as unspecific objects; speech touching sound; the rest regarding the five objects of sense.

Of these, the five intellectual senses (those of sensation) concern objects specific as well as non-specific (collective); speech concerns sound; the rest regard the five objects (of sense.)

(177). Of the ten external senses, the five intellectual ones concern specific as well as non-specific objects:—by *specific* here is meant *gross*—and such objects are sound and the rest (the *Tanmâtras*), manifesting themselves as Earth, &c.,—(the elements) having the properties of calmness, turbulence and dulness. The *non-specific* objects are the primary elements. The particle *Mâtra*, in the word *Tanmâtra*, serves to distinguish these from the gross objects. The senses of Yogis concern sound, &c., in their subtle as well as gross states, whereas the senses of ordinary men relate to sound, &c., in their gross forms only.

(178). Similarly of the senses of action (the Motor Senses). Speech concerns sound, in its gross form, because speech is the cause of sound. Speech, however, can not be the cause of the primary element of sound, which is the direct effect of Self-consciousness (*Ahankâra*); and as such has the same cause as speech itself (which also being one of senses, proceeds directly from the principle of Self-consciousness.

"*The rest,*" *i. e.*, the four other senses of action—the excretory organs, &c., "*concern five objects*," because the different objects, *e. g.* jar &c., which are the objects of these senses, are all made up of the five primary elements of sound, colour, &c.

Among the thirteen organs, some are said to be superior to others, reasons for which are given:

KÂRIKÂ XXXV.

The superiority of internal over external organs.

Since Buddhi with the other internal organs adverts to (comprehends) all objects (of sense), these three are said to be the warders (principal ones), and the others the gates (secondary).

(179). *Warders*, *i. e.*, chief ones.

Gates *i. e.*, such as are the external organs.

The superiority accounted for.

Since *Buddhi*, with *Ahankâra* and *Manas*, apprehends (*i. e.*, determines) all objects exhibited by the external organs, these latter are said to be gates (secondary organs), and *Buddhi*, with the other internal organs, the warders (chiefs).

Buddhi is the chief, not only in comparison with the external organs, but also with regard to the other external organs, *Manas* and *Ahankâra*. To this effect it is said:—

KÂRIKÂ XXXVI.

The superiority of Buddhi over all others accounted for.

These (the external organs together with *Manas* and *Ahankâra*), characteristically differing from one another and being different modifications of Attributes resemble a lamp in action; (and as such) having first enlightened the Spirit's purpose, present it in its entirety to *Buddhi*.

(180). As the village officer collects the rent from the different heads of families and delivers the collection to the treasurer, who again, in his turn, carries it to the head-officer, who finally makes it over to the king: so, in the same manner, the external organs, having operated on (observed) an object, present the observation to *Manas*, which reflects on it (and thereby imparts thereto its qualifications) presenting these qualified observations in turn to *Ahankâra*, which takes specific cognizance of them, and finally delivers such personal cognition to the head-officer, *Buddhi.* Hence it is said: "*These having enlightened the Spirit's purpose present it to Buddhi.*"

In spite of diverse combination of the Attributes, yet the internal organs co-operate towards a single purpose like a lamp.

(181). The external organs together with *Manas* and *Ahankâra*, are various affections of Attributes, *i. e.*, modifications of Goodness, Foulness and Dulness, which though Essentially opposed to one another, are yet brought to co-operate for the supreme purpose of the Spirit; just as the wick, oil and fire, though variously opposed to the action of one another, yet join, under the form of a lamp, in removing darkness, and thus illumine (manifest) the different colours. The same is the case with the Attributes; such is the connection.

Objection—why not make Buddhi subordinate to the others?

An objection is raised. Why should it be said that the other organs present their impressions to *Buddhi?*—Why should not we make it quite the other way: *Buddhi* subordinate to *Ahankâra?*

We reply:—

KÂRIKÂ XXXVII.

Since it is *Buddhi* that accomplishes the Spirit's enjoyment, and again it is Buddhi that exposes the subtle difference between Nature and Spirit.

Reply: The superiority of Buddhi accounted for, because it directly fulfils the soul's purpose, and bridges the gap between Spirit and Matter.

(182). Since the purpose of the Spirit is the only incentive to the action of the organs, that organ is supreme over others which accomplishes that purpose directly; and since it is *Buddhi* alone that does this, it is supreme. Just as the chief minister, being the direct agent of the king, is supreme over other officials. *Buddhi* assumes the form of the Spirit through its proximity to it, and as such leads to the accomplishment of its purpose. Sensation consisting either of pleasure or pain, resides in *Buddhi*, which is (reflected) in the Spirit and thus leads to its enjoyment. As the observation, reflection and consciousness of objects are transferred to *Buddhi* through their various modifications; in the same manner, the functions of the senses also coalesce with the functional determination of *Buddhi*, as the forces of the subordinate officials do with that of the master.

Objection :—Buddhi supplying the soul with pleasure, no Mukti, is possible.

Reply :—It latterly shows to the soul its distinction from Matter.

(183). The objector asks: If *Buddhi* only serves to accomplish the Spirit's enjoyment, then no emancipation is possible.* We reply :—"*It afterwards exposes the difference between Spirit and Nature.*"—By *exposition* here is meant 'bringing about'; the construction of *Antaram Visinashti*, being similar to that of *Odanapâkam pachati*.†

The difference being caused, will end and thus would emancipation cease with it.

The objector retorts: the difference between Spirit and Nature being thus, according to your own saying, a *caused* one, must have an end in time; and thus (the Spirit could never attain to eternal Beatitude).

---

* For *Buddhi* would continue help the Spirit to its enjoyment of pleasure, and hence this latter could never attain to final beatitude which consists in the total extinction of both pleasure and pain.

† *Visinashti* itself has been explained as—"expresses the difference," then the mention of *Antaram* would seem superfluous. But it is not so; it helps to intensify the meaning of the sentence.

We reply :—The difference has been everlasting ; and the function of *Buddhi* lies only in exhibiting the difference to the full view of the Spirit who then recognises the fact that he himself is something distinct from the constitutionally mobile and modifiable Nature. (The distinction is not *caused* by *Buddhi* ; it is as eternal as the Spirit and Nature themselves). By this it is also implied that emancipation is the sole purpose of the Spirit. The distinction of Spirit and Nature, however, is extremely subtle and hard to be perceived.

Reply :—the difference is permanent Buddhi only serving to expose it to the soul's view.

The organs having been described, the author next describes objects, specific and non-specific :

KÂRIKÂ XXXVIII.

The five primary elements are non-specific; from these five proceed the five gross elements ; these latter are said to be specific (because) they are calm (soothing), turbulent (terrific) and deluding.

The division of objects into specific and non-specific.

(184). The *Tanmâtras—sound* and the rest—are subtle ; and the character of *calmness*, &c., do not belong to these. The word *Mâtra* denotes the capability of these elements of being enjoyed.

(185). Having thus stated the non-specific, the specific objects are described: "*From these &c.*" From the five *Tanmâtras*, of sound, touch, colour, taste and odour proceed respectively the five gross Elements—Âkâsa, Air, Fire, Water and Earth.

(186). *Objection:* we grant that these are thus produced ; but what about their specific character ? We reply : "*These are said to be specific*" —Why ? because "*they are calm, turbulent and deluding.*" The first च has a causal and the second a collective signification.

Specific because soothing, terrific and deluding.

Among the gross elements, A'kâsa, &c., some have the attribute of Goodness predominating in them; and these accordingly are pleasing, enlightening and buoyant; others predominate in Foulness, and are turbulent, painful and fickle; the rest predominating in Darkness are dull, confounded and sluggish. These elements, thus visibly discriminated, are *specific i. e.*, gross. The primary elements on the contrary cannot be similarly discriminated by ordinary people; and as such they are said to be non-specific, *i. e.*, subtle.

The sub-divisions of the specific objects are stated :—

KÂRIKÂ XXXIX.

Subtle (astral) bodies and such as are produced of parents, together with the gross elements, form the three sorts of specific objects. Of these the subtle bodies are everlasting, and those produced of parents are perishable.

Specific objects divided into : (1) subtle bodies, (2) bodies produced of parents. and (3) the great elements.

(187). "*The specific objects are of three sorts*"; these three sorts are mentioned: (1) Subtile bodies (which are not visible, but are only postulated in order to explain certain phenomena); (2) Those produced of parents, comprising the sixfold Sheaths (Kośas). Among these latter, hair, blood and flesh are produced from the mother; and the veins, bones and marrow from the father; these six are the six Kôśas. Thus then we have seen that the subtile bodies form the first kind of specific objects; bodies produced of parents, the second; and the gross elements the third,—objects like the jar, &c., being included in the last.

(188). The difference between a subtile body and a body produced of parents is stated—"*Subtile bodies are permanent and those produced of parents perishable*," that is to say ending in (dissolving into) either liquid, ash or dirt.

The subtile bodies are permanent, those produced of parents perishable.

The Astral body is described.

KÂRIKÂ XL.

The Astral Body is unconfined permanent, and migrating, invested with dispositions.

The mergent, subtle (astral) body,—formed primevally, unconfined, permanent, composed of *Buddhi* and the rest down to the primary elements,—migrates, is without enjoyment, and is invested with dispositions.

Unconfined and Permanent.

(189). When the emanations from Nature began, the first object to evolve therefrom, for each Spirit individually, was the Astral Body. This body is *unconfined*, inasmuch as it can enter even a solid piece of stone. It is again "*permanent*;"* since it exists all along, from the first creation to the final dissolution.

The Astral Body is "*composed of Buddhi and the rest, down to the primary elements.*" That is to say, it is an aggregate— of *Buddhi, Ahankâra*, the eleven senses and the five primary elements; and as such it is specific, being endowed with the properties of calmness, restlessness and dulness.

Objection :—Unnecessariness of postulating two bodies, astral and gross.

(190). *Objection* : Let this astral body be the only body the seat of enjoyment for the Spirit :—What is the need of the gross physical body comprised of the six sheaths?

---

* The word *niyata* is differently interpreted by Nârâyana Tirtha (in his *Sânkhya-Chandrikâ*). He takes it in the sense of "restricted," *i. e.*, an astral body is restricted to one particular Spirit; and so there are distinct astral bodies to each Spirit. The interpretation of Gaudapâda closely resembles that of the *Kaumudi*. There does not seem to be any special ground for preferring either of the two, though I am more inclined to the interpretation of the *Kaumudi*.

Necessity of the physical body, because the astral body migrates.

We *reply* :—"*It migrates*," *i. e.*, the astral body invariably deserts the body it has lately occupied, and again occupies another. (If it be asked) why does it do so? (we reply)—(because it is) "*without enjoyment*," that is to say, because the astral body by itself—without a corresponding gross physical body of six sheaths to afford the seat of enjoyments,—would be without any enjoyments, and therefore it migrates.

Objection:—How can the Astral Body migrate, being without dispositions?

(191). *Objection* :—Transmigration is due to merit and demerit; and these have no connection with the Astral Body (referring as they do primarily to *Buddhi*, and then by reflection, to the Spirit) then how can this latter migrate?

Reply:—It has dispositions?

We *reply* :—(because) "*it is invested with dispositions.*" The dispositions are merit and demerit, wisdom and ignorance, passion and dispassion, power and weakness; endowed with these primarily is the *Buddhi*, with which latter again the Astral Body is connected; and as such the Astral Body becomes mediately connected with the various dispositions, just as a piece of cloth is perfumed by contact with *champaka* flowers. Thus then, being invested with dispositions, it becomes quite natural that the Astral Body should migrate.

The Astral Body dissolving at each pralaya.

(192). (If it is asked) why should not the Astral Body—like Nature—last even after the final dissolution? We reply (because it is) "*mergent*," that is to say, because it dissolves (into Nature its immediate cause). The mergent character of the Astral Body is to be inferred from the fact of its being caused, (*i. e.*, being caused, and, as such, having a beginning in time, it must have an end also).

Objection : We grant all this. But why not attribute migration to Buddhi, Ahankâra and the senses ? Have done with the unwarranted postulation of an Astral Body.

Objections :—Why not attribute migration to Buddhi, &c. ?

We *reply* :—

KÂRIKÂ XLI.

As a painting stands not without a ground, nor a shadow without a stake, so neither does the *Linga* (*Buddhi*, &c.,) subsist supportless, without a specific (body).

Reply—the Buddhi cannot rest without substrate.

(193). Buddhi, &c., are called *Lingâ*, because they are the means of cognition (*Linganât*, *Jnâpakât*, *lingam*).* In support of this the author puts forth a syllogism :—between the ordinary physical death and re-birth, Buddhi and the rest have some sort of evolved body for their receptacle, because they are aggregates of the five primary elements ; like their prototypes in the ordinary physical body.

" *Without specific bodies*," *i. e.*, without subtle (astral) bodies. Testifying to this assertion, we have the following (from the Mahâbhârata): "Then Yama extracted from Satyavân's body, the thumb-sized body, which he had entrapped and thus subjugated." Here the mention of the extracted body as "thumb-sized" implies the fact of its having been the Astral Body, since it is impossible that the Spirit could have been extracted. By *Purusha* in the above extract, is meant the Astral Body,—explaining the word derivatively as—that *which sleeps* (*lies—sêtê*) in the body (*puri*).

The existence of the Astral Body corroborated by the Mahâbhârata.

Having thus proved the existence of the Astral Body, the author states the reason and method of its migration:—

---

* Cf. The *Panchikarana-vivarana—Tattwachandrikâ*—where a similar explanation of the word is given.

KÂRIKÂ XLII.

Reasons and manner of the migration of the Astral Body.

Formed for the sake of the Spirit's purpose the Astral Body plays its parts like a dramatic actor, on account of the connection of means and consequences, and by union with the predominant power of Nature.

(194). Formed for the Spirit's purpose the Astral Body plays like a dramatic actor by connection with the means—merit, &c., and consequences, the occupation of different kinds of gross bodies, the effects of merit, &c. That is to say, as a dramatic actor, occpuying different stages, plays severally the parts of Parasurâma, Yudhishthira, Vatsarâja so does the astral body, occupying various gross bodies, play the part of man, brute or plant.

The capacity of the Astral Body is due to the power of Nature.

(195). (If it is asked) Whence this capability of the Astral Body? We reply, "*by union with the predominant power of Nature.*" As is declared by the Puranas: "The various strange developments are due to Nature's omnipotence."

It has just been said, "*by connection with means and consequences;*" the author therefore next describes these *means* and *consequences*:

KÂRIRÂ XLIII.

The means and consequences—Dharma, &c.

The essential dispositions are innate; the incidental ones, such as merit, &c., are seen (considered) to be appurtenant to the organs; the uterine germ, &c., belong to the effect.*

---

* It may be pointed out that Davies has quite misunderstood this Kârikâ. In the first place, he renders *Sâm-siḍdhikâh* by "transcendental", the very reverse of what it does mean. Secondly he renders *Karanâsrayiṇah* by "including cause", though in reality the compound means "located in organs"—as explained by the *Kaumudi* as well as the *Chandrikâ*.

I. Incidental dispositions.

(196). *Incidental* = consequent ; *i. e.*, brought about after the man's birth, by propitiating the gods, &c.

II. Essential innate.

"*Essential dispositions are innate,*" *e. g.*, it is declared that at the beginning of the creation the revered primeval sage Kapila emerged into existence, fully equipped with merit, wisdom, dispassion and power. Incidental dispositions, on the other hand, are not innate, that is to say, they are brought about by personal effort; such merit, &c., are those belonging to Vâlmiki and other Great Rishis.

The opposites of Dharma, &c., similarly explained.

The same is to be understood with regard to demerit, ignorance, passion and weakness.

Flesh, blood, &c., related to the gross body.

(197). The agrregate formed of the uterine germ, flesh, blood, &c., of the child in the mother's womb, is related to the gross physical body ; that is to say, they are particular states of the latter ; as are also the childhood, youth, &c., of the born man.

(198). The *means* and the *consequences* have been explained ; now the respective consequences of the various meâns are described.

KÂRIKÂ XLIV.

Consequences of the various means.

By virtue (is obtained) ascent to higher planes ; by vice, descent to the lower ; from wisdom (results) beatitude ; and bondage from the reverse.

Virtue leads to higher planes.

(199). "*By virtue, &c.*," *i. e.*, to the various starry spheres (the Brâhma, the Prâjâpatya and so forth.)

Vice to lower.

"*By vice, &c.,*" *i. e.*, to the lower planes known as *sutala*, &c.

Wisdom, brings about beatitude.

"*From wisdom, beatitude.*" Nature ministers to the experience of the Spirit only so long as discriminative wisdom is not attained; when, however, this is attained, Nature finds its work in connection with that particular Spirit fulfilled, and accordingly retires from him. As is declared, "The workings of Nature continue only till the attainment of discriminative knowledge." "*From the reverse, &c.,*" *i. e.*, from false knowledge, results bondage.

From the reverse of the above, respectively, contradictory results. The three kinds of bondage.

(200). This bondage is also of three kinds: Natural, Incidental and Personal. The natural bondage is that of those Materialists who contemplate on Nature as the Spirit; with reference to such men, it is laid down in the Puranas: "The contemplators of the unmanifested (Nature) continue (in the chain of metempsychosis) till a hundred thousand years" [at the end of which they attain to true wisdom]. The incidental bondage is of those who contemplate on the various products of Nature as Spirit,—the elements, the senses, *Ahankâra* and *Buddhi*. With regard to these it is laid down: "The contemplators of the senses continue till ten Manvantaras; those of the elements, till a hundred Manvantaras; those of Ahankâra, till a thousand; and lastly, those of the Buddhi having done away with all feverish excitement, continue till ten thousand Manvantaras. Those labouring under the incidental bondage are (conventionally called) *Videhas.*"

The personal bondage is due to *Ishtâpûrta* (actions done with selfish motives, such as the digging of tanks, &c., done with the sole motive of personal gains hereafter). Those performing such actions, having their minds influenced by desire, are ignorant of the true nature of the Spirit, and as such undergo bondage.

KÂRIKÂ XLV.

Consequences of various means.

From dispassion results absorption* into *Prakriti*; from passionate attachment, transmigration; from power, non-impediment (of desires;) and from the reverse, the contrary.

I. Absorption into Prakriti from dispassion.

(201). "*From dispassion results absorption into Prakriti.*" Those who are free from passion, but are ignorant of the true nature of spirit, are absorbed into *Nature*. By *Prakriti* here are meant Prakriti, *Buddhi*, *Ahankâra*, the Elements, and the senses. Those who meditate upon these as Spirit are absorbed into these (*i. e.* those mistaking the senses for the Spirit become absorbed in the senses, and so on), that is to say, they rest there till, in the course of time, they are born again.

II. Transmigration from passionate attachment.

(202). "*From passionate attachment results migration.*" The epithet "passionate" implies the painful character of metempsychosis; because (as has been previously described) passion is the source of pain.

III. Non-impediment from power.

(203). "*From power, non-impediment,*" *i. e.*, the non-obstruction of desires. "A powerful man (Iśwara) is one who can do whatever he wishes."

---

* Davies takes the Hindu commentators to task, here, and remarks: "It (the Sânkhya) does not recognise any absorption of the subtle body into Nature, until the soul is entirely free.........Hence the meaning is that by the destruction of passion, the influence of the material world is destroyed, and the soul is independent, though not yet finally liberated." All this is quite true; but I don't see how this affects the position of the Hindu commentators, who, at least Vâchaspati Misra among them, do not assert the final absorption of the bodies into Nature; all that they mean is that by dispassion, the soul—or more properly, its seat, the astral body—is absorbed into Nature and rests there till it is born again. It may be remarked that this resting is what, in theosophic parlance, is called "the peaceful rest enjoyed by the Individuality in Devachan."

IV. Obstruction of desires from weakness.

"*From the reverse,*" *i. e.* form weakness—"*the contrary*"—*i. e.*, the frequent obstruction of desires.

With a view to describe collectively as well as individually, the eight properties of *Buddhi*—virtue, vice, &c., in order to show which of these are to be practised, and which relinquished, by those desiring emancipation—the author first describes them collectively :—

KÂRIKÂ XLVI.

The intellectual creation described.

This is an intellectual creation, distinguished by Error, Disablity, Contentment and Perfection. By the hostile influence of the inequalities of attributes, the different forms of this creation become fifty.

I. Error.
II. Disability.
III. Contentment.
IV. Perfection.

(204). *Pratyaya* = That by which anything is known, *i. e.*, *Buddhi.* "*Error,*" *i. e.*, ignorance, is a property of *Buddhi*; so is also "*disablity*" which results from the incapacity of the sense-organs. *Contentment* and *Perfection* also are properties of *Buddhi* as will be described later on.

Virtue &c., included in the above four.

Of these, the three former,—error, disability and contentment—include Virtue and the other six intellectual properties; leaving aside Wisdom which is included in Perfection.

Subdivisions of the above are fifty.

(205). These properties are next considered individually. "*The forms of these are fifty.*" If it is asked: Whence these fifty forms? We reply "*from the hostile influence of the inequalities of the attributes.*" The inequality may consist either in the individual strength of the one in comparison with the other two, or of two conjointly with that of the third. This inquality is assumed to be more or less in accordance with the requirements of particular cases; and it leads to the suppression of Attributes by one another—thus giving rise to the fifty forms of intellectual creation.

The fifty forms are next enumerated:

KÂRIKÂ XLVII.

There are five forms of Error; twenty-eight of Disability, arising from the imperfection of the organs; Contentment has nine forms; and Perfection eight.

5 forms of Error.
28 of Disability.
9 of Contentment.
8 of Perfection.
50

(206). The forms* of Error are *ignorance*, *egotism*, *passion*, *hatred* and *attachment to the body:* respectively called, *obscurity* (*Tamas*), *delusion* (*Moha*). *extreme delusion* (*Mahamoha*), *gloom* (*Tamisra*), and *utter darkness* (*Andhatamisra*). Egotism, &c., partake of the nature of Error; though, as a matter of fact, they are its products. A certain object being erroneously determined by Ignorance, Egotism and the rest, partaking of the nature of Ignorance, become attached to it. It is for this reason that the revered Vârshaganya (Vyâsa?) declares Ignorance to be made up of the five component parts.

(207). Now the author states the sub-divisions of the five forms of error:—

KÂRIKÂ XLVIII.

Of Error there are eight forms, as also of Delusion; extreme Delusion is ten-fold; Gloom is eighteen-fold, and so is also utter Darkness.

Sixty-two subdivisions of Error.

Of Ignorance—eight forms.

(208). "*Of Error,*" *i. e.*, of Ignorance, "*there are eight forms.*"

---

* *Abhiniveśa*—is a technicality of Yoga Philosophy. It is defined by Patanjali (*Yoga Sutra* 11-9) as the "tenacity of life—an attachment to the body which relates the residue of one's former life."

Eight of Delusion.

Ignorance of the form of Error consists in mistaking non-spiritual Nature, *Buddhi*, *Ahankâra* and the subtle elements, for Spirit; and these non—spiritual things are eight in number, Error is said to be eight-fold.

(209). The च refers the eight forms to Delusion. The gods having attained the eight occult powers, consider themselves to be immortal, and their powers also to be everlasting; this is the error of Egotism, and since this has the eight *Siddhis* for its object, it is said to be eight-fold.

Ten of Extreme Delusion.

(210). "*Extreme Delusion is ten-fold.*" By *Extreme Delusion* is meant the attachment to the objects of sense, sound, odour and the rest —which are ten-fold, each of the five being either divine or otherwise; and hence having these for its object, Extreme Delusion is said to be ten-fold.

Eighteen of Gloom.

(211). "*Gloom,*" *i. e.*, Hatred, "*is eighteen-fold.*" The objects of sense, sound, &c., are ten by themselves; the eight occult powers however are not objects of sense by themselves, but only as means to the attainment of the various sensuous objects. And the objects of sense, being mutually suppressive, their means—the Powers—too are retarded. The Powers, together with the objects of sense, make up eighteen, and these being the objects of Gloom or Hatred, make it eighteen-fold.

Eighteen of Utter Darkness.

(212). "*So is Utter Darkness*"—[Utter Darkness = Attachment to life]. The word "*tathâ*" refers *eighteen-fold-ness* to Utter Darkness. The gods having attained the eight occult powers and enjoying their consequences—the ten sensuous objects—live in continual fear of these being wrested from them by the Rakshasas; and this fear constitutes *Abhiniveśa* or attachment; and this latter having for its object the aforesaid eighteen things—the eight powers and the ten objects—is said to be eighteen-fold.

(213). Thus the five forms of Error, with their sub-divisions become sixty-two.

---

(214). Having thus described the five forms of Error, the author next states the twenty eight forms of Disability:

KÂRIKÂ XLIX.

Twenty-eight forms of Disability.

The injuries of the eleven organs, together with those of *Buddhi*, are pronounced to be Disability; the injuries of *Buddhi* (itself) are seventeen—brought about by the reversion of contentment and perfection.

The Eleven—caused by injuries to the sense-organs.

(215). The injuries of the organs are mentioned as causes of so many injuries of *Buddhi*, and not as, by themselves, independent forms of Disability. These injuries—"Deafness, leprosy, blindness, paralysis, paralysis of the hands, lameness, dumbness, *ajighratâ* (failure of the sensibility of the olfactory nerves), impotency, failure of the action of the bowels, and idiocy,"—consequent on the failure of the various sense-organs, are the eleven kinds of intellectual disability, and these are mentioned together with those of *Buddhi* (itself) in accordance with the theory of the non-difference of cause and effect.

Seventeen caused by the reversion of contentment of perfection.

(216). Having thus described the disabilities of *Buddhi*, arising from those of the sense-organs, the disabilities of *Buddhi* itself are next stated —"*With the injuries of Buddhi.*" If it be asked—how many are these?—we reply, "*seventeen are the injuries of Buddhi.*" Wherefore? "*by the reversion of contentment and perfection.*" Contentment being nine-fold, the disabilities caused by its reversion are nine-fold also; and similarly *perfection* being eight-fold, the disability caused by its reversion is eight-fold,—thus making the seventeen intellectual disabilities proper.

(217). The author next enumerates the nine forms of Contentment:

KÂRIKÂ L.

Nine forms of Acquiescence.

Nine forms of Contentment are set forth: four internal, relating severally to nature, means, time and luck; and five external, relating to abstinence from objects of sense.

The five internal forms.

(218). The five internal forms of Contentment belong to those who have ascertained that Spirit is different form Nature, but still being ill-advised, do not make further attempts in the direction of meditation, &c., which are the means of discriminative wisdom; and these forms are called *internal*, because they pre-suppose the difference of *Âtman* and *Prakriti*. It being asked—which are these?—the reply is "*relating severally to nature, means, time and luck,*" *i. e.*, whose names are *nature* &c.

I. Ambha.

(219). The contentment called "*prakriti*" consists in the satisfaction of the disciple on being told that discriminative wisdom is only a modification of *Prakriti* and, as such, would come to every one in the natural course of events, and there is no need of hankering after it by meditation, &c., and this contentment is also called *Ambha*.

II. Salila.

(220). The second form of contentment arises from the following instruction: wisdom could not be attained in the ordinary course of nature; because, if it were so, then everybody would attain to wisdom, because the course of nature for the forms of nature affects all individuals equally. Such wisdom could only be attained through asceticism; and so thou must follow an ascetic life and give up all meditation, &c. The satisfaction arising from the above instruction is called *Salila*.

(221). The third form, called "Time," or *Ogha*, is the satisfaction arising from the instruction that asceticism too cannot bring about Emancipation; for all means await the proper *Time* for bringing about their various consequences, and so when the *Time* has arrived, one's ends will be gained without undergoing the troubles of asceticism.

III. Ogha.

(222). The fourth form called "*Luck*," or *Vrishti*, is the satisfaction arising from the following: "Discriminative wisdom proceeds neither from nature, nor from any other means (such as asceticism, &c.), nor does it depend solely upon time, but it comes only by luck. Thus it was through mere luck that the children of Madâlasâ when quite infants, obtained wisdom by their mother's instructions and thereby attained beatitude.

IV. Vrishti.

(223). The external forms of Contentment are five, arising from abstinence from sound, odour, &c.—the five objects of sense. These belong to those who are free from all attachment, but take the non-spirits—Nature, &c., to be Spirit. These forms are called *external*, because they pre-suppose the existence of Spirit, without knowing what it is; and these come after freedom from attachment. The causes of this non-attachment being five, it is five-fold, and consequently so is the contentment resulting therefrom. The objects of sense being five, the abstinence from these must also be five-fold. Abstinence too is due to the preception of discrepancies in the process of sensuous enjoyment—consisting mainly of earning, saving, wasting, enjoying, killing lives and so on.

The five external forms.

(224). To explain:—The means of acquiring wealth, service, &c., are invarably the sources of pain to the servants—as is declared in the following:—"Who would ever be attracted towards service, considering the pain caused by the insults to be suffered. at the hands of the wardens of a vain monarch?"—the content-

I. Pâra

ment resulting from abstinence from objects of sense due to the consideration of such troubles, is called *Pâra.*

(225). And then, the wealth being obtained, brings with it the further trouble of protecting it from the king, thieves, floods and fire—the contentment due to abstience arising from such considerations is the second called *Supâra.*

II. Supâra.

(226). Thirdly, the wealth having been obtained and safely hoarded, there arises the fear of its being spent—this consideration gives rise to the third form of abstinence leading to contentment called *Pârâpâra.*

III. *Pârâpâra.*

(227). Fourthly, when one becomes accustomed to sensuous objects, his desires increase; the non-fulfilment of these brings about the fourth, called *Anuttamâmbha.*

IV. *Anuttamâmbha.*

(228). Lastly, there arises the notion that there can be no enjoyment (either in this world or the other), without the cruel process of killing animals, and contentment due to the abstinence arising from the perception of the cruelty of the process, is the fifth called *Uttamâmbha.*

V. *Uttamâmbha.*

Thus the four external froms of contentment, together with the five internal ones, make up the nine froms mentioned above.

(229). The author next describes the primary and secondary divisions of *Power* :—

KÂRIKÂ LI.

The eight Powers (*i. e.*, means of acquiring them) are reasoning, oral instruction, study, three-fold suppression of pain, acquisition of friends, and purity. The three before mentioned (Error, &c.) are checks to these (Powers).

The eight powers.

(230). The chief among those enumerated above is the *three-fold suppression of pain*—three-fold on account of the three-foldness of the pains to be suppressed.

The other means mentioned, being means to power only through the three-fold suppression of pain, are called *secondary*. And these five are both causes and effects. Of these *study* is only a cause. The three principal ones (suppression of pain) being only effects; the rest are both cause and effect.

(1) Târa.

(231). The first, *study*, named *Târa*, consists in comprehending the sense of the psychological sciences by listening to the teachings of a qualified teacher.

(2) Sutâra.

(232). The effect of this last, *oral instruction*, implies the comprehension of the meaning of instructions, it being a useful habit with writers, to imply the effect by the cause; this constitutes the second *Siddhi* called *Sutâra*.

(3) Târatâra.

(233). *Reasoning* consists in the investigatin of the meaning of scripture by a process of dialectics not contrary to the scriptures themselves. This investigation consists in strengthening the portion of the scripture by setting aside all doubts and objections with regard to it; this process is also called *meditation* by writers on the Vedas, and the Power due to this is called *Târâtâra*.

(4) Ramyaka.

(234). The fourth is the *acquisition of friends*. Even though one has arrived at truth by the right process of reasoning yet he has no faith in his conclusions until he has talked them over with his teacher and follow-students. Hence the acquisition of a qualified teacher and follow-students is said to be the fourth *Siddhi* called *Ramyaka*.

(5) Sadamudita.

(235). By *dâna* here is meant *purity* (of discriminative wisdom)—deriving the word from the root *Daip** = to purify. As is declared by the revered Pâtanjali: "An unimpeded discriminatve knowledge is the means to the suppression of pain." (*Yoga-Sutra* II—26). By *unimpèdedness* in the Sutra is meant *purity*, by which again is meant the process of placing discriminative wisdom on a clear basis, after having destroyed all doubts and mistaken notions mixed with different-kinds of cravings or desires]. This *purity* is not obtainable without the refinement arising from a long and uninterrupted course of practice (of the wisdom attained). Thus the word *dâna* includes (as a means to power) Practice also. This is the fifth, called *Sadâ-Mudita.*

---

* Davies remarks that the root is "coined for the occasion." But I may refer the reader to the *Siddhânta-Kaumudî*, under the *Sutra Vânyasya Sânyôgadêh* (VI/4/68).

(236). The three primary means to Power are called, *Pramoda Mudita* and *Modamâna.* And these three with the last five are the eight (means to) Power.

Another explanation of the Powers.

(237). Others explain the distich thus: The perception of truth without the instruction of others, brought about purely by means of instructions received in past births is what is meant by *ûha.* And that which is obtained by listening to the tenets of the Sânkhya Philosophy as learnt by others, is the second called *Sâbda*, because it follows merely from the study of the text. When the truth is learnt at a teacher's, in the company of follow-students, it is said to be the third, known as *study*, because it is brought about by study. The fourth consists in the attainment of wisdom by coming in contact with a friend who has already got it. Fifthly, *generosity* is said to be a means to wisdom, because true wisdom is imparted by the teacher, duly propitiated with gifts.

The propriety of either interpretation we leave to the learned to judge; and we desist from pointing out the faults of others, because our duty lies only in elucidating the cardinal doctrines of the Sânkhya Philosophy.

(238). The Disabilities of *Buddhi* arising from the reversion of Contentment and Power thus become seventeen in number. Of the different poritions of intellectual creation, it is well-known that Power is most desired by all. So the author next mentions Error, Disability and Contentment as impediments to Power: "*The aforesaid three are checks to Power.*" *The aforesaid three* refers to Error, Disability and Contentment. And these are curbs to the different means of attaining Power, because they retard their progress; and thus being opposed to Power, the latter three are ever undesirable.

(239). *Objection:*—Granted all this. But it has been laid down that the creation is for the Spirit's purpose. This purpose can be fulfilled either by the intellectual creation alone; or by the elemental alone. Why have both?

The reply is:—

KÂRIKÂ LII.

Necessity of two-fold creation.

Without dispositions there would be no Linga (Element), and without the Linga there would be no development of dispositions. Wherefore proceeds a two-fold creation, the personal (belonging to the body, astral and gross) and intellectual.

(240). *Linga* denotes the creation composed of the primary elements; and *disposition*, the intellectual.

The meaning of the Kârikâ is that the elemental creation cannot manifest itself for the fulfilment of the purpose of the Spirit, without the intellectual creation; nor conversely is the latter capable of having its complete manifestation without the elements. Hence the necessity of a two-fold creation.

Necessity of the elemental creation.

Necessity of the intellectual creation.

Again experience, the purpose of the Spirit, is not possible in the absence of the two bodies and the object of sense. Hence the necessity of the elemental creation. And conversely the means of experience—the sense-organs—could never be complete without the three internal organs—*Manas Ahankâra* and *Buddhi*. Nor would these latter be what they are, if there were no dispositions, virtue, &c. And lastly, discriminative wisdom—the only means to emancipation, would not be possible without the above two kinds of creation. Whence the necessity of the double creation.

The fault of reciprocal causality explained as due to the eternality of creation.

(241). The possible objection of reciprocal causality is explained away as being similar to that of the seed and the sprout, due to the fact of the creation having had no beginning in time (being eternal), and the creation of bodies and dispositions at the beginning of the present cycle is said to be due to the impulse of residual tendencies left by the bodies and (dispositions related to particular Spirits), in the previous cycle.

(242). The various forms of the intellectual creation having been mentioned, the author next mentions those of the elemental creation:

KÂRIKÂ LIII.

The force of elemental creation.

The divine class has eight varieties, the lower animals, five; mankind is single in its class; thus briefly is the world of living beings.

The eight divine sorts.

(243). The eight divine varieties are the Brâhma, the Pâjâpatya, the Aindra, the Paitra, the Gândharva, Yâksha, the Râkshasa and the Paiśâcha.

five of the lower animals.

(244). The five varieties of lower animals are quadrupeds (other than deer), deer, birds, creeping things and the immovable (trees, &c.)

Mankind single.

(245). *Mankind is single*, not counting its sub-divisions—Brahmanas &c., as separate, as the bodily formation is the same in all classes of men.

(246). The author next lays down the three-foldness of the elemental creation based on the excess or otherwise of intelligence in the form of the higher, the middle and the lower:

KÂRIKÂ LIV.

The different divisions of beings based on the predominance of the Attributes.

Among the beings of the higher plane Goodness predominates: among those of the lower predominates Dulness; in the middle reside those predominating in Foulness—these constituting the whole Universe, from Brahmâ to the tuft of grass.

The six Heavenly Regions.

(247). The Heavenly regions—Bhuvah, Swah, Mahah, Jana, Tapas and Satya—predominate in Goodness. Those consisting of the lower animals and trees, &c., are characterised by Dulness. The regions of the earth—consisting of the seven Dvipas (or continents) and Oceans—predominate in Foulness, inasmuch as they abound in pain and are given to actions, righteous or otherwise.

The whole of the Universe is summed up in the pharse "*from Brahmâ to the tuft of grass.*"

(248). Having thus described the creation, the author next describes its productiveness of pain, that would lead to dispassion, one of the means to Emancipation:—

KÂRIKÂ LV.

The sources of pain.

There (in the world) does the Sentient Spirit experience pain, arising from decay and death, due to the non-discrimination of the Spirit from the body, until it is released from its person (until the dissolution of the astral body); wherefore pain is natural.

Pain of decay and death, the common lot of all creatures.

Among corporeal beings there are many varieties of experience interspersed with pleasure and pain; yet the pain of decay and death is the common lot of all. The fear of death,—"may I not cease to be; may I continue to be" &c.—being common to man as well as to the smallest insect, and the cause of fear constituting pain, death is a source of pain.*

(249). *Objection:*—Pleasure and pain are the properties of *Buddhi*; and as such how can these be said to belong to the Spirit?

Explanation of the word *Purusha*.

Reply:—(the name) "*Purusha*," literally meaning "One who sleeps in the astral body"; and this latter being connected with *Buddhi* and its properties, leads to the idea of the Spirit being connected with them.

(250). *Question:*—How can pain related to the body be said to belong to the Spirit?

Limit of the pain.

"*Reply*:—"*Due to the non-discrimination of Spirit from the body.*" The Spirit, not alive to its distinction from the body, mistakes the fluctuations of the latter for its own. The आ in आविनिवृत्तेः may be taken as pointing to the limit of the Spirit's pain—the meaning being, "*Until the body has ceased to be*, the Spirit suffers pain."

(251). The author next decides the question of the Maker of the Universe:

KÂRIKÂ LVI.

The question as to the Maker of the Universe decided.

This creation from *Buddhi* down to the specific elements, is brought about by the modifications of Prakriti. The work is done for the emancipation of each

---

* It may be worth noting here that Death in itself is not pain. it is only the fear (the fear of the unknown) that makes the thought of death so painful.

Spirit, and thus is for another's sake, though appearing as if it were for the sake of Nature herself.

The different views of the cause of creation set aside.

(252). The creation is brought about by Nature; it is neither produced by a God, nor is it an evolution from Brahman; nor can it be said to be Uncaused; since, in this latter case, the Universe would be either an eternal entity or eternal non-entity (an absurdity). It cannot be said to be evolved from Brahman (the Vedânta view), for there can be no (material) modification of pure intelligence, Brahman, as postulated by Vedânta. Nor, again can creation be said to be brought about by Nature under the guiding hand of a God; for a God is naturally without action and, as such, cannot be the supervisor, just as an inactive carpenter cannot be said to manipulate his tools.

Objection:—Nature being eternally active, no emancipation possible.

(253). *Objection*:—Granted that the creation is due to Nature alone. But Nature is eternally active and, as such, her operations should never cease; and hence there would be no emancipation of any Spirit.

Reply:—The creation is for the spirit's end and ceases with the purification of these.

Reply:—"*The creation appearing as if it were for Nature's own sake, is really for the sake of another.*" A cook, having finished the cooking, retires from the work; similarly Nature being urged to action for the emancipation of the Spirit, brings about this emancipation; and thenceforth cease her operations with regard to the Spirits already liberated (and, thus emancipation is not impossible).

Objection:—An insentient Nature cannot act towards a definite end.

(254). *Objection*:—Granted all this. But it is only something sentient that can act towards the fulfilment of its own or of another's purpose; and Nature being insentient cannot act in the manner described; and, as such, she requires a sentient supervisor (over her blind force);

the Spirit residing in the body cannot be such a supervisor, because such conditioned Spirits are ignorant of the true character of Nature; consequently there must be some other sentient agent, superintending *ab extra* the operations of Nature—and to this we give the name *God.*

We *reply* :—

Kârikâ LVII.

As the insentient milk flows out for the growth of the calf, so does Nature operate towards the emancipation of the Spirit.

Instance of an insentient object acting towards a definite end.

(255). It is a fact of observation that insentient objects also act towards definite ends, *e.g.*, the action of milk towards the nourishment of the calf. Similarly Nature, though insentient, could act towards the emancipation of the Spirit.

The view of a Personal Universal Lord overthrown.

(255a). It would not be right to urge that the production of the milk being due to the superintending care of God, its action cannot afford a case parallel to the action of insentient Nature;—because all actions of an intelligent agent are due either to selfishness, or benevolence, neither of which can be said to be the cause of the creation of the Universe, which, therefore, cannot be said to be due to the action of an intelligent agent. For God, being the Lord of the Universe, has all that he requires and, as such, He can have no selfish motive; nor can His action be said to be due solely to pity; for pity consists in a desire for the removal of others' pains; but before creation, Spirits were without bodies, and, as such, without pain, for the removal of which God's compassion would be moved. And if the pain subsequent to creation were said to be the cause of creation, then we should be in the inextricable nooze of reciprocality: the creation due to pity, and pity due to the creation. And again if God were moved to creation by pity, then he would create none but happy mortals. And if the diversity of pleasures be attributed to the past deeds of the individual Spirit, then what is the necessity of postulating a supervisor? And if you urge the incapability of mere *Karma*—an unintelligent agent—without a supervisor, towards creation, then we reply, that the creation of bodies, &c.; being incapable of being produced by *Karma*, we may very easily say the same with regard to pleasure, &c., as well (and, pleasure, &c., will have to be attributed to God also).

None of the above objections apply to the case of Nature.

(256). The action of the non-intelligent Prakriti is due neither to selfishness nor to mere pity; and thus in this case, none of the above faults are applicable. The only motive of Nature is the purpose of the Spirit. Thus therefore the instance cited in the Kârikâ is quite appropriate.

(257). It has been said—"*as if for its own purpose.*" The author explains this:—

KÂRIKÂ LVIII.

The Spirit's end—the motive of Nature.

As people engage in acts to satisfy desires, so does the Unmanifested Principle (Nature) act for the emancipation of the Spirit.

Desire is satisfied on the attainment of the desired object which is the purpose of the agent; because an end of action is only that which is desired.

The similarity is pointed out: "*So does the Unmanifested Principle act for the Emancipation of Spirit.*"

(258). *Objection*:—We grant that the purpose of the Spirit is the motive to the action of Nature, but whence the cessation of her operations?

We *reply*:—

KÂRIKÂ LIX.

The cause of the cessation of Nature's operations.

As a dancing girl, having exhibited herself to the spectators of the stage, ceases to dance, so does Nature cease to operate when she has made herself manifest to the Spirit.

The word "stage,"—the place—implies the spectators,—the occupiers of the place. Having *manifested herself i. e.*, her different modifications, sound, &c., as different from the Spirit.

(259). *Objection:*—We grant the action of Nature for the Spirit's purpose. But she is sure to get some compensation for her pains from the Spirit—just as a servant does from his gratified master; and as such the motive of Nature cannot be said to be purely altruistic.

We *reply:*—

KÂRIKÂ LX.

Nature expects no compensation.

Generous Nature, endowed with attributes, causes by manifold means, without benefit to herself, the good of the Spirit, who is devoid of attributes, and as such ungrateful.

As a qualified servant accomplishes the good of his unqualified master, through purely unselfish motives, without any benefit to himself; so does generous Nature, endowed with the three Attributes, benefit the Spirit without any good in return to herself. Thus the pure unselfishness of Nature's motives is established.

(260). *Objection:*—We grant all this: But a dancing girl having retired from the stage after her exhibition, returns to it again, if so desired by the spectators; similarly would Nature act even after having manifested herself to Spirit.

We *reply*:—

KÂRIKÂ LXI.

Nothing is more modest than Nature: such is my opinion. Once aware of having been seen, she does not again expose herself to the view of the Spirit.

The reason why Nature does not revert to her actions.

By *modesty* here is meant delicacy (of manners), the inability to suffer exposure to the *Purusha's* view. As a well-bred lady unvisible to the Sun, with her eyes cast down, having her body uncovered by chance, happening to be seen by a stranger, tries to hide herself in such a way as not to be seen again; so Nature—even more modest than such a lady—having once been seen by the Purusha, will is no case show herself again.

---

(261). *Objection*:—Let this be so. But *Purusha*, being devoid of Attributes and Modifications, how is his emancipation possible? For emancipation consists in the removal of bondage; and bondage being only another name for the karmic residua imbued with dispositions and troubles, it is not possible to the unmodifying *Purusha*. And as the *Purusha* is devoid of action it can have no migration—which latter is only another name for *death*. Hence it is a meaningless assertion that the creation is for the purpose of *Purusha*.

The author meets the above objection by accepting it:

KÂRIKÂ LXII.

Verily no Spirit is bound, or is emancipated, or migrates; it is Nature alone which has many receptacles, that is bound, or is released, or migrates.

Bondage and release in reality apply to Nature.

(262). No Spirit is bound; not any migrates; nor is any emancipated. Nature alone, having many receptacles (bodily forms of being), is bound, migrates and is released. Bondage, migration and release are ascribed to the Spirit, in the same manner as defeat and victory are attributed to the king, though actually occurring to his soldiers; because it is the servants that take part in the undertaking, the effects of which—gain or loss—accrue to the king. In the same manner, experience and release, though really belonging to Nature, are attributed to the Spirit, on account of the non-discrimination of Spirit from Nature. Thus the objection above urged loses all its force.

---

(263). *Objection:*—We understand that bondage, migration and release, are ascribed to the Spirit; but of what good are these to Nature?

We *reply*:—

KÂRIKÂ LXIII.

Nature binds and releases herself by means of her own developments.

Nature by herself binds herself by means of seven forms; she causes deliverance for the benefit of the Spirit, by means of one form.

"*Nature binds herself by means of seven forms*" (*i. e.* dispositions) all the properties of *Buddhi*, save discriminative wisdom. For the benefit of the Spirit she releases herself by herself, by means of one form, *viz.*, discriminative wisdom. That is to say, she does not again bring about the experience or emancipation of the same Spirit.

Objection:—We grant all this. What then?

KÂRIKÂ LXIV.

The form and character of discriminative wisdom.

Thus it is that by the practice of truth, wisdom is attained, which is complete, incontrovertible, (and hence) pure, and absolute: (by means of which the idea is obtained that) "I am not, naught is *mine*, and *I* do not exist."

(264). The word "truth" indicates the knowledge thereof.

By means of practice of truth, in the manner described above, through a long course of repeated, uninterrupted and respectful exercise of true knowledge, the wisdom manifesting the distinction of Spirit from Matter, is attained. All exercise brings about the knowledge of its object, so in the present case the exercise being one of truth results in the cognition thereof. It is for this reason of its leading to truth that the knowledge is called *pure*.

The purity of the wisdom explained.

(265). Why *pure?* Because "*incontrovertible*" (or unmistaken). Doubt and error are the two impurities of knowledge; and the above knowledge being free from these is said to be *pure*. Doubt consists in thinking a decided fact to be undecided; and as such it is only a form of error. Thus by saying, "*hence incontrovertible*" the absence of both doubt and contradiction is implied; this absence being due also to the fact of the exercise belonging to *truth*.

(266). *Objection:*—We grant all this, but the eternal tendency towards false knowledge is sure to bring about its results in the shape of false knowledge, which will lead to its inevitable effect, the miseries of metempsychosis, of which thus there would be no end.

Absoluteness explained.

In reply to the above, it is declared "*Absolute,*" *i.e.*, unmixed with error. Though tendency towards error is eternal, yet it is capable of removal by means of true wisdom, though this has a beginning in time. For partiality towards *truth* is natural to *Buddhi*, as declare also outsiders (here, the Bauddhas): "No amount of contradiction can set aside the flawless (knowledge of) the character of objects, for such is the partiality of *Buddhi*."

The form of the knowledge.

(267). The form of the cognition is stated:—*I am not, naught is mine*, and *I do not exist*. '*I am not*' merely precludes the possibility of action from the Spirit. As is declared (by grammarians), "The root *As* together with *Bhu* and *Kri* signify *action* in general." Hence all actions, external as well as internal, determination, self-consciousness, reflection, observation, &c., are all precluded from the Spirit. And since there is no action of the Spirit, there arises the idea that "I am not." "I" here implies *agency*, such as in "I give," "I eat," &c.; and no such agency can belong to the Spirit, who is without any action. And from this follows the idea that "*naught is mine.*" For it is only an agent that can have any *possession*; and hence the preclusion of action implies that of *possession* as well.

Or we may interpret the three forms in another way. The sentence "I do not exist," means that "I am the Spirit, not productive ;" and because non-productive "I have no action" —'I am not'; and since without action, "I can have no possessions," hence "naught is mine."

(268). *Objection :*—Even after such a knowledge, there might be left something yet unknown, which would lead to re-birth.

We *reply :*—"*It is complete,*" *i. e.*, there is nothing left unknown after the attainment of such knowledge as the above. Hence there is no re-birth.

(269). *Question :*—What is accomplished by this knowledge of truth ?

We *reply :*—

KÂRIKÂ LXV.

The cause of the cessation of Nature's operation.

Possessed of this knowledge, Spirit, as a spectator, pure, at leisure and at ease, beholds Nature, which has now reverted from the seven forms (to her primitive state) after her prolific fruition has ceased, under the force of true wisdom.

The two things for the production of which Nature had begun action were *experience* and *the perception of truth ;* and when these two have been accomplished there is nothing left to be done, and hence Nature ceases from prolific activity.

"Under *the force (of true wisdom).*" The seven forms—Virtue, &c.—are all due to erroneous knowledge. Dispassion, too, of those who have it through mere contentment, is due to erroneous knowledge. And this erroneous knowledge is removed by its contradictory—true knowledge. And thus the cause, erroneous knowledge, being removed, its effects, the seven forms are also removed, and hence from these Nature desists.

"*At ease,*" *i. e.*, Inactive; "*Pure*" *i. e.*, Unmixed with the impurities of *Buddhi*, due to the Attributes,—though to the last moment the Spirit continues to be in contact with the Attribute of Goodness; or else no (perception, and hence no) wisdom would be possible.

---

(270). *Objection*:—Let this be so. We have nothing to say against your statement as to Nature desisting from productions. But the production has been said to be due to the connection (of Spirit and Matter); and this connection is only a form of capability; and the capability to experience constitutes the intelligence of the Spirit, as the capacity of being the object of experience constitutes the non-intelligence and objectivity of Nature; and these two capabilities can never be said to cease; and you cannot urge that they cease, because there is nothing left to be done, for though one set of objects has been experienced by the Spirit, there are others of the same kind still to be experienced. (Thus no emancipation is possible).

We *reply*:—

KÂRIKÂ LXVI.

No birth after attainment of wisdom, for want of motive.

"She has been seen by me," says the one and so retires; "I have been seen," says the other, and ceases to act. Hence though there is still their conjunction, it affords no motive towards further creation.

(271). So long as nature has not manifested truth, she may bring about the enjoyment of the various objects of sense; but she cannot do this after she has once brought about discriminative wisdom. For experience is due to erroneous knowledge, and when this latter, the cause, has ceased under the force of wisdom, there can be no enjoyment; just as the sprout is not possible in the absence of the seed. The Spirit mistakes the various objects of sense—the modifications of Nature—to belong to himself. And discriminative wisdom also is a modification of Nature, and as such is taken by the Spirit to belong to himself. When however such wisdom has been brought about, the connection of the Spirit with Nature ceases, and so he ceases to feel. Nor is the Spirit by himself capable of bringing about discriminative wisdom, which is a development* of Nature. And the Spirit who has attained to wisdom, cannot accept any purpose as his own. And further, experience and emancipation being the purpose of the Spirit, supply the motive to the operations of Nature; but when these two have ceased to be the purpose of the Spirit, they cease to be motives also. With this view it is declared—"*There is no motive*, &c." A motive is that which moves Nature to act towards creation; and this is not possible, when there is no purpose of the Spirit.

(272). *Objection*:—We grant all this. But no sooner would wisdom be attained than the body would dissolve; and then how could the bodiless Spirit behold Nature (as distinct from himself)? If it be asserted that emancipation does not follow immediately on the attainment of wisdom, on account of the unspent residuum of *Karma*—then we ask,—how is this residuum destroyed? If by mere fruition (*i. e.*, by experience), then you tacitly imply the inability of wisdom alone to bring about emancipation. And hence the assertion that "emancipation follows from a knowledge of the distinction between the Manifested, the Unmanifested, and the Spirit."

---

* **Because wisdom is a property of Buddhi which is an emanation from Nature.**

becomes meaningless. And the hope too—that emancipation would be obtained on the destruction of the residua of *Karma*, by means of experience extending to a limitless period of time —is too sanguine ever to be realised.

To this we *reply*:—

KÂRIKÂ LXVII.

Reason why the body does not dissolve immediately on the attainment of wisdom.

By the attainment of perfect wisdom, Virtue and the rest become devoid of causal energy; yet the Spirit remains awhile invested with body, as a potter's wheel continues to revolve by the force of the impulse previously imparted to it.

(**273**). The unlimited residua of Karma also having their prolificness destroyed by the force of true knowledge, they do not lead to any further experience. The seeds of action produce sprouts only on the ground of *Buddhi*, damp with the waters of pain. The ground, however, becomes barren by having its dampness of pain dried up by the extreme heat of true wisdom, and hence the Karmic seeds cease to sprout forth into experience. With this view it is said—"*Virtue and the rest become devoid of causal energy.*" Even when wisdom has been attained, the body continues for a while, on account of the previous impulse; just as even after the action of the potter has ceased, the wheel continues to revolve on account of the momentum imparted to it. In due time, however, the impulse having exhausted itself it stops. In the continuance of the body, the impulse is supplied by virtue and vice whose fruition has already commenced, as is declared by *S'ruti*—"Other (actions) having been destroyed by itself experience, the soul attains beatitude" and "The delay is only so long as beatitude is not attained" [*Chhândogya* VI, i, 2]. This impulse (or impression) is a peculiar one, in which all illusion has been destroyed; and in consequence of this impulse, the Spirit remains awhile invested with the body.

(274). *Question*:—Let this be so: if the Spirit remains invested with body by some sort of impulse, when will be his final release?

We *reply*:—

KÂRIKÂ LXVIII.

Final beatitude.

When the separation of the informed Spirit from his corporeal frame at length takes place, and Nature ceases to act in respect to it, then is final and absolute emancipation accomplished.

The prolificness of those actions, whose fruition has not commenced, being destroyed, and those also whose fruition has commenced, having been spent by experience, Nature has her purpose fulfilled, and hence ceases with respect to that particular Spirit, who thus obtains absolute and eternal cessation of the triad of pain.

---

(275). Though the doctrine has been proved by reasoning, yet in order to inspire respect towards it, the precedence of the great Rishi is stated:

KÂRIKÂ LXIX.

The precedence of Kapilâ.

This abstruse knowledge adapted to the emancipation of the Spirit, wherein the origin duration, and dissolution of beings are considered, has been thoroughly expounded by the great Rishi.

"*Abstruse*," *i. e.*, hard to be grasped by dull-brained people.

"*By the great Rishi*" *i. e.*, by Kapila.

The feeling of reverence thus roused is strengthened by basing the doctrines on the Veda: "*Wherein are considered, &c.*," *i. e.*, in which knowledge (*i. e.*, for the sake of which knowledge).* These, *origin* &c., are also considered in the Veda.

---

* As in *Charmani dvipinam hanti*.

(276). Let this be so: We shall respect the direct sayings of the great Rishi (Kapila); wherefore should we pay attention to the assertions made by Ísvarakrishna?

We *reply*:—

KÂRIKÂ LXX—LXXI.

Importance of the Science.

This supreme, purifying (doctrine) the sage imparted to Âsuri, who taught it to Panchasikha, by whom the science was extensively propagated.

Handed down by tradition of pupils, it has been compendiously written in Âryâ metre by the noble-minded I′śvarakrishna who has thoroughly investigated the truth.

Purifying, purifying the Spirit from all sins, the cause of the triad of pain.

Supreme, *i. e.*, chief among all purifying doctrines.

(277). "Ârya = that which has arrived at truth; one whose intellect is such is called Âryamati."

---

(278). This science is a whole in itself,—not a mere section—because it treats of all branches of knowledge:—

KÂRIKÂ LXXII.

The sixty topics of science.

The subjects that are treated of in the seventy distiches are those of the complete science comprising sixty topics, exclusive of illustrative tales, and omitting controversies.

The sixty topics are thus laid down in the *Râja-Vârtika*: 1 The existence of Prakriti (Kârikâ XIV); 2 its singleness (XIV); 3 Objectiveness (XI); 4 Distinctiveness (of Spirit from Matter) (XI); 5 Subserviency (of Matter to Spirit) (XVII);

6 Plurality (of spirits) (XVIII) ; 7 Disjunction (of Spirit from Matter in the end) (XX) ; 8 Conjunction (of Spirit and Matter in the beginning) (XXI) ; 9 Relation of subserviency (of Matter with Spirit) (XIX) ; 10 Inactivity (of the Spirit) (XIX) ; these are the ten radical categories. (In addition to these) are the five kinds of error (XLVII), nine of contentment (L), and twenty-eight of disability of the organs (XLIX) ; these, together with the eight sorts of power (LI), make up the sixty "topics." All these sixty topics are treated of in the above seventy distiches, which therefore form a complete science and cannot be said to be only a portion thereof.

Of the above (ten radical categories), singleness, objectivity, and subordination relate to Nature ; distinctness, inactivity and plurality to Spirit ; and existence, disjunction, and conjunction to both ; and existence of the relation of subserviency relates to gross bodies also.

May this work of Vâchaspati Miśra, the *Tattva-Kaumudî* (the *Moonlight of Truth*), continue to please (cause to bloom) the clear (lily-like) hearts of good men !

Thus ends the Tattva-Kaumudî of Vâchaspati Miśra.
